Energy Policy of KARE

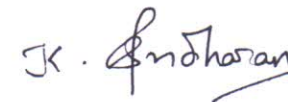

KARE recognizes the global warming and climate change effects from energy consumption from fossil fuel. KARE has the responsibility for future world and willing to go beyond the statutory minimum requirements in protecting the future.

The aims of KARE towards Energy are to:

- Adhere to the regulatory requirements of all relevant legislation and be a role model in maintaining higher standards
- Include energy efficiency principles into the procedures and plans (including purchase of equipments, construction of buildings) of the institute, and involving students and staff
- Invest in renewable energy production and energy efficiency measures and help to keep the environmental impact as minimum as possible
- Supervise continuously and review at regular intervals the energy usage and energy performance through energy audit
- Create and innovate strategies and methods to implement for improving energy efficiency
- Provide need based training for creating awareness on energy efficiency principles among students and staff
- Monitor the contractors and operators on the institute campus to comply with the requirements of this policy
