Maintaining and Utilizing Physical, Academic and Support Facilities

Best Practice

1. Title of the Practice

- Online Valuation Process

2. Objectives of the Practices

1. Simple pre-process for digitization
2. Eliminating Dummy numbering and all allied processes
3. Data validation, Greater control over process – eliminate the errors in results
4. eliminates redundancies, thereby allowing for error free result publication in minimal time.
5. No separate process needed for revaluation requests

3.The Context

Onscreen Valuation System is useful to evaluate physical copies of the answer sheets in digital format.It helps in eliminating physical answer sheet handling constraint for the examiners, moderators and result processing authority. Physical written answer sheet is scanned and uploaded to cloud based software system.Digital evaluation tools like digital annotations, assigning marks, total calculation, moderation is simplified and can be completed in quick time

4. The Practice

5. Evidence of Success

The Online evaluation process helps in reducing the result declaration time and also eliminates the human error. The process ensures complete anonymity of a student's answer script as the allotment of booklets are fully randomized through the software. The system has in-built checks to prevent evaluators from skipping pages/answers and this process has also made it easier for the university to calculate the remuneration for the evaluators. One can also automatically send selected scripts for second/third evaluation if required and also providing for answer script copies to students (RTI/Revaluation requests) can be done swiftly.

6. Problems Encountered and Resources Required

For better understanding of the Online Valuation System and for the successful completion of the online valuation process, we need to train the evaluators about the software modules.
