# **DEPARTMENT OF CHEMICAL ENGINEERING**

# 2018 REGULATIONS (CHOICE BASED CREDIT SYSTEM)

KALASALINGAM ACADEMY OF RESEARCH AND EDUCATION (DEEMED TO BE UNIVERSITY) ANANDNAGAR, KRISHNANKOIL-626126

VISION & N	IISSION
UNIVERSITY VISION	DEPARTMENT VISION
To be a Center of Excellence of International repute in education and research.	To be a globally recognized department through excellence in teaching and research
UNIVERSITYMISSION	DEPARTMENT MISSION
To produce technically competent, socially committed technocrats and administrators through quality education and research.	To provide quality education and training that can prepare graduates with excellent technical and leadership skills, integrity and social responsibility
PROGRAM EDUCATIONAL OBJECTIVES (H	PEO's)

**PEO1:** Graduates would engage in advanced studies in engineering, Science and in other related areas.

**PEO2:** Graduates would be successful as engineers and further develop skills through lifelong learning.

**PEO3:** Graduates would have effective communication and managerial skills and assume leadership roles in industry and /or in business and contribute to the upliftment of the society.

# STUDENT OUTCOME

**SO-1:** Ability to identify, formulate, and solve engineering problems by applying principles of engineering, science, and mathematics.

**SO-2**: An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental and economic factors.

**SO-3**: An ability to communicate effectively with a range of audiences.

**SO-4:** An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.

**SO-5:** An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan task and meet objectives.

**SO-6**: An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

**SO-7:** An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

#### **PROGRAM OUTCOMES**

The student will have

- 1. An ability to apply knowledge of mathematics, science and chemical engineering in the design and operation of chemical processes
- 2. An ability to identify, formulate and solve complex problems in the various domains of chemical engineering such as fluid mechanics, heat transfer, mass transfer, mechanical operations and transport phenomena
- 3. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability
- 4. An ability to design and conduct experiments, as well as to analyze and interpret data
- 5. An ability to use the techniques, skills, and modern engineering tools necessary for chemical engineering practice
- 6. A knowledge of contemporary issues
- 7. The broad education necessary to understand the impact of chemical engineering solutions in a global, economic, environmental and societal context
- 8. An understanding of professional and ethical responsibility
- 9. An ability to work individually and as a member of a team
- 10. An ability to communicate effectively
- 11. An ability to function on multidisciplinary teams
- 12. A recognition of the need for, and an ability to engage in life-long learning

	Optics, Electromagnetism and Quantum mechanics	L	Т	Р	С
PHY18R175		3	1	2	5
Pre-requisite:	Nil Course C	ategor	y: Basi	c Scien	ces
	Course	Type:	Integr	ated Co	ourse

# **Course Objectives:**

To understand the basic concepts of optics, quantum physics and its applications.

• To provide the students a firm understanding of the basics of Electricity, Magnetism and its applications. **Course Outcomes:** 

# Upon successful completion of this course, students will be able to

**CO1:** Understand the concepts of diffraction and polarization.

**CO2:** Apply the concepts of optics in laser and fiber optics.

**CO3:** Explore the knowledge on electro statistics.

CO4: Understand the fundamentals of magnetism.

**CO5:** Apply the knowledge on solving the wave equations

# Mapping of COs with Pos

CO/PO							PO					
	1	2	3	4	5	6	7	8	9	10	11	12
C01	Н	Н										
CO2	Н	Н						Н		М		
CO3	Н	Н		М				Н		М	L	
CO4	Н	Н		М				Н				
CO5	Н	Н					L					
Unit1: Diffra	ction a	nd Pola	rizatio	n							1	2 Hours

# **Unit1: Diffraction and Polarization**

Diffraction: Introduction to interference and example; concept of diffraction, Fraunhofer and Fresnel diffraction, Fraunhofer diffraction at single slit, double slit, and multiple slits; diffraction grating, characteristics of diffraction Grating and its applications. Polarization: Introduction, polarization by reflection, polarization by double refraction, scattering of light, circular and elliptical polarization, optical activity

# **Unit2: Laser and Fiber Optics**

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne), solid-state lasers (Neodymium), applications of lasers in science, engineering and medicine. Numerical aperture and Acceptance angle of fiber – Types of optical fiber - Active and passive fiber sensors- Endoscope.

#### 12 Hours

12 Hours

Laws of electrostatics, electric current and the continuity equation, laws of magnetism. Ampere's Faraday's laws. Maxwell's equations. Polarization, permeability and dielectric constant, polar and non-polar dielectrics, internal fields in a solid, Clausius-Mossotti equation, applications of dielectrics, Dielectric Breakdown – Types and Remedies

#### Unit4: Magneto statics and Magnetic materials

#### **12 Hours**

Magneto statics: Biot-Savart's law & its applications- straightonductor, circular coil, solenoid carrying current. Divergence and curl of magnetic field. Magnetic vector potential. Ampere's circuital law. Magnetic

properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-, Para- and Ferro-magnetic materials.

### **Unit5: Quantum Mechanics**

#### **12Hours**

Introduction to quantum physics, black body radiation, explanation using the photon concept, photoelectric effect, Compton effect, de Broglie hypothesis, wave-particle duality, verification of matter waves, uncertainty principle, Schrodinger wave equation, particle in a box (1D).

#### List of Experiments

- 1. To determine the dispersive power of prism using spectrometer and mercury source
- 2. To determine the wavelength of sodium light by Newton's Ring
- 3. To determine the wavelength of sodium light using diffraction grating
- 4. To determine the numeral aperture (NA) of an Optical Fibre.
- 5. To find the wavelength of He-Ne Laser using transmission diffraction grating.
- 6. To determine the refractive index of a prism/ liquid using spectrometer.
- 7. Deflection magnetometer M and BH TAN C position
- 8. To determine the thickness of a material using air wedge method
- 9. Measurement of field strength B and its variation in a Solenoid (Determine dB/dx).
- 10. Determination of dielectric constant of liquids / Solids
- 11. Determination of Magnetic Susceptibility

CHV18P171	Chomistry	L	Т	Р	С
	Chemistry	3	1	2	5
Pre-requisite: Ni	l Course (	Catego	r <b>y:</b> Bas	ic Scie	nces
	Course	e Type:	Integr	ated Co	ourse

#### Unit -I: Atomic and Molecular Structure

Schrodinger wave equation: Derivation of time independe  $n^2 t$  Schrodinger wave equation, Representation of Schrodinger wave equation in polar coordinates - Radial distribution function graphs of s, p, d and f

orbital's. Molecular Orbital Theory: MOT concept, MO diagrams of homo-nuclear diatomic molecules (hydrogen, nitrogen and oxygen) and hetero-nuclear diatomic molecules (carbon monoxide and nitric oxide). Crystal field theory: CFT concept, weak and strong ligands, energy level diagrams of transition metal ions ( $Fe^{2+}\& Fe^{3+}$ ) in octahedral and tetrahedral complexes and their magnetic properties. Intermolecular forces - Ionic, dipolar and van der Waals interactions.

#### **Unit-II: Periodic Properties**

Effective nuclear charge - Factors affecting effective nuclear charge: Penetration or shielding of orbital's - Variation of s, p, d and f orbital energies of atoms in the periodic table - Aufbau principle(Building-up principle): Application of Aufbau principle in writing electronic configuration, Deviation from Aufbau principle - Periodicity of properties in a periodic table - Periodic properties: Atomic and ionic sizes, ionization energies, electron affinity and electro negativity - Variation of periodic properties in the periodic table - Hard soft acids and bases: Concept and examples.

#### Unit-III: Free Energy and Chemical Equilibria

Thermodynamic functions: Definition and mathematical expression for Work, Energy, Enthalpy, Entropy and Free energy - Nernst equation: Derivation, apply Nernst equation to determine of solubility product, pH (glass electrode). Potentiometric titrations: Acid-Base, Redox and precipitation reaction - Water analysis: Hardness by EDTA method and chloride ion by Argentomentric method - Corrosion: Definition, types (dry & wet) and mechanism. and control of Dry and Wet corrosion.

#### **Unit-IV: Organic Reactions**

Nucleophilic substitution reactions: Definition, types and examples of nucleophile, Compare nucleophilicity and basicity of a nuceophile - Types of nucleophilic substitution (case RX and ArX): Mechanism of  $S_N1$ ,  $S_N2$ ,  $S_Ni$  and Benzyne. Electrophilic substitution reactions: Definition, types and examples of electrophile -Electrophilic substitution reactions of hydrocarbons: Halogenation, sulphonation, nitration. Friedel crafts alkylation and acylation reaction. Nucleophilic addition reactions (case aldehydes and ketones): Polarity of C=O bond. General mechanism of nucleophilic addition reactions on aldehydes and ketones: HCN, HOH, ROH and NaHSO<sub>3</sub> addition. Electrophilic addition reactions (case alkenes): General mechanism of electrophilic addition reactions (case alkenes): General mechanism of electrophilic addition reactions of HBr [Markownikoff & Anti-Markownikoff (peroxide effect)] - Addition of alkene (polymerization of ethylene). Elimination reactions: Types of elimination reactions (case alkyl halides): Dehydrohalogenation of alkyl halides -  $E_1$  and  $E_2$  mechanism -Dehydration of alcohols to alkene and ethers. Greener synthesis of drug molecules (Aspirin and Ibuprofen)

#### **Unit-V: Stereochemistry & Spectroscopic Techniques**

Stereochemistry - Definition with examples: Geometrical isomers (alkene) and stereoisomers, symmetry, chirality, enantiomers, diastereomers, meso and racemic mixture. Representation of 3D structures: Wedge formula, Fischer projections, Newmann and Sawhorse formula (upto 2 carbons) - Conformational analysis: Ethane, butane and cyclohexane - Configurationally analysis: Rules of RS nomenclature and application of RS nomenclature to molecules containing one chiral centre. Electronic spectroscopy: Principle, instrumentation, selection rules and medicinal application of fluorescence spectroscopy. Nuclear magnetic resonance spectroscopy (<sup>1</sup>H-NMR): Principle, instrumentation, chemical shift, coupling constant and application (structural identification of the compound C<sub>3</sub>H<sub>6</sub>O from <sup>1</sup>H-NMR data). X-ray diffraction: Principle, instrumentation and applications X-ray diffraction.

#### List of Experiments (Any 10)

13

- 1. Determination of Viscosity by Ostwald Viscometer.
- 2. Determination of surface tension by stalagmometer.

- 3. Adsorption of acetic acid by charcoal.
- 4. Determination of chloride content of water.
- 5. Estimation of hardness of water by EDTA method.
- 6. Determination of the rate constant of a reaction
- 7. Thin layer chromatography.
- 8. Determination of the partition coefficient of a substance between two immiscible liquids
- 9. Determination of Saponification /acid value of oil.
- 10. Preparation of Aspirin
- 11. Potentiometric titration of strong acid vs. strong base.
- 12. Potentiometric titration of weak acid vs. strong base.
- 13. Determination of cell constant and conductance of solutions.

MAT18R101 Linear Algebra And Calculus	L	Т	P	Credit
	3	1	0	4
Pre-requisite: Nil Course Category:	Basic Sc	iences a	nd Mat	hematics
Course Type : Theo	ry			

#### **Course Objective:**

To enable the students to acquire knowledge and skills in basic components of calculus, to handle the Situations involving multivariable calculus, and to diago1n4alizable a symmetric matrix is using Eigen values and eigen vectors.

#### **Course Outcomes:**

Upon successful completion of this course, students will be able to

- 1. Know the fundamental theorems such as Rolle's Theorem, Mean value theorem, Taylor's theorem and its Applications.
- 2. Understand the basic concepts of limit, continuity, derivative, partial derivative and total derivative and Its applications.
- 3. Solve the real world problems using differentiation and integration.
- 4. Understand the concepts of sequence, convergent of sequences, series and testing of convergent of series Using different methods.
- 5. Find the solution of simultaneous linear equations using matrices and to find the Eigen values and Eigen Vectors of a matrix, Cayley-Hamilon theorem and orthogonal transformations.

#### Mapping of Course Outcome(s):

CO/P							PO					
0	1	2	3	4	5	6	7	8	9	10	11	12
CO1	Н	Н										
CO2	Н	Н										
CO3	Н	Н		М								
CO4	Н	Н		Μ								
CO5	Н	Н					L					

#### Unit 1: Calculus

Rolle's Theorem- Mean value theorems - Taylor's and Maclaurin theorems with remainders - Indeterminate forms and L'Hospital's rule - Maxima and minima.

#### Unit 2: Multivariable Calculus (Differentiation)

Limit, continuity and partial derivatives - directional derivatives - total derivative - Maxima, minima and saddle points - Method of Lagrange multipliers.

#### **Unit 3: Calculus (Applications)**

Curvature (Cartesian coordinates) - Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

#### **Unit 4: Sequences and series**

Convergence of sequence and series, tests for convergence; Power series, Taylor's series, series for exponential, trigonometric and logarithm functions;

#### **Unit 5: Matrices**

System of linear equations; Symmetric, skew-symmetric and orthogonal matrices; Determinants; Eigen values and eigenvectors; Clayey-Hamilton Theorem - Diagonalization of matrices - Orthogonal transformation- Reduction of Quadratic form to Canonical form.

MAT18R102 Multiple Integration, Ordinary Differential	L	Т	Р	Credit
Equations and Complex Variable	3	1	0	4
Pre-requisite: Nil Course Category Course Type	Basic So Theory	ciences	and M	athematics

#### **Course Objective**

To enable the students to understand the concepts of multiple integrations, their applications, and to handle analytic functions on complex plane and perform complex integration.

#### **Course Outcomes**

Upon successful completion of this course, students will be able to

- 1. Understand the concepts of double and triple integral and its applications.
- 2. Know about the applications of double and triple integral in vector calculus.
- 3. Know the methods of solving differential equations of first and second orders.
- 4. Understand the concepts of analytic functions, conformal mappings and bilinear transformations.
- 5. Understand the concepts of singularity, residues and evaluation of certain improper integrals.

C01	Н	Н										
CO2	Н	Н										
CO3	Н	Н		М								
CO4	Н	Н		М								
CO5	Н	Н					L					

#### Mapping of Course Outcome(s)

#### Unit 1: Multivariable Calculus (Integration)

Multiple Integration: Double integrals (Cartesian), change of order of integration in double

Integrals, Change of variables (Cartesian to polar), Applications: areas and volume; Triple integrals (Cartesian), orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds;

#### **Unit 2: Integral theorems**

Gradient, curl and divergence. Scalar line integrals, vector line integrals, scalar surface integrals, vector surface integrals, Theorems of Green, Gauss and Stokes.

#### **Unit 3: Ordinary differential equations**

Exact, linear and Bernoulli's equations, Euler's equations, Equations not of first degree: equations solvable for p, equations solvable for x and Clairaut's type. Second order linear differential equations with variable coefficients, method of variation of parameters, Cauchy-Euler equations.

### **Unit 4: Complex Variable – Differentiation**

Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions; elementary analytic functions (exponential, trigonometric, logarithm) and their properties; Conformal mappings, Mobius transformations and their properties.

### **Unit 5: Complex Variable – Integration**

Contour integrals, Cauchy Integral formula (without proof); Taylor's series, zeros of analytic functions, singularities, Laurent's series; Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral involving sine and cosine, Evaluation of certain improper integrals (Integration around small semicircles and rectangular contours).

MAT18R204 Partial Differential equations and Transforms	L	Т	Р	Credit
	3	1	0	4
Pre-requisite: Nil Course Categ	ory: Bas	ic Scien	ces and	Mathematics
Course	Гуре :	Theory		

# **Course Objective**

To enable the students to solve the partial differential equations, to understand discrete and continuous transformations, and to solve differential equations and difference equations using transform techniques.

#### **Course Outcomes**

Upon successful completion of this course, students will be able to

- 1. Know the method of solving first and second order partial differential equations.
- 2. Classify the second order partial differential equations and to know about solving of initial and boundary value problems.
- 3. Understand the concept of Laplace transform and its application in solving ordinary differential equations and partial differential equations.
- 4. Know about Z transform and its application in solving difference equations.
- 5. Know about Fourier transforms and its properties.

CO1	Н	Н										
CO2	Н	Н										
CO3	Н	Н		Μ								
CO4	Н	Н		М								
CO5	Н	Н					L					

#### **Unit 1: Partial Differential Equations**

First order partial differential equations, solutions of first order linear and non-linear PDEs. Solution to homogenous and non-homogenous linear partial differential equations second and higher order by complimentary function and particular integral method.

#### **Unit 2: Applications of Partial Differential Equations**

Flows, vibrations and diffusions, second-order linear equations and their classification, Initial and boundary conditions, solution of the wave equation and diffusion equation by the method of separation of variables, The Laplacian in plane, cylindrical and spherical polar coordinates and solutions.

#### **Unit 3: Laplace Transform**

Laplace Transform, Properties of Laplace Transform, Laplace transform of periodic functions. Finding inverse Laplace transform by different methods, convolution theorem. Evaluation of Integrals by Laplace transform, solving ODEs and PDEs by Laplace Transform method.

#### Unit 4: Z Transform

Z-transform - Elementary properties - Inverse Z - transform - Convolution theorem – Formation of difference equations - Solution of difference equations using Z - transform.

#### **Unit 5: Fourier Transform**

Fourier series – Half range sine and cosine series - Fourier integral theorem (without proof) - Fourier Transform pair - Sine and Cosine transforms – Properties - Transforms of simple functions – Convolution theorem - Parseval's Identity.

BIT18R101 Biology For Engineers		L	Т	Р	С				
DITIONIUI	blology for Engineers	3	0	0	3				
Pre-requisite: Ni	Course	Course Category: Basic Sciences							
	Course	<b>Course Type:</b> Theory							

#### **Course outcomes**

**CO1:**Describe the fundamentals of cell structure and cell cycle

CO2:Understand the classification and functions of bio molecules

**CO3:**Elaborate the basic cellular mechanisms such as replication, transcription and translation

**CO4:** Describe the underlying concepts of infection and immunity.

**CO5:**Explain various applications of biology

#### **Unit I: Introduction**

Fundamental difference between science and engineering- comparison between eye and camera, Bird flying and aircraft; major discoveries in biology-; Classification based on: Cellularity- Unicellular and Multi cellular; Ultra structure - prokaryotes and eukaryotes; three major kingdoms of life; Cell structure, intracellular organelles and their functions, comparison of plant and animal cells- Overview of Cell cycle and cell division

#### **Unit II: Bio molecules**

Chemistry of bio molecules: Carbohydrates, Lipids, Proteins; classification of amino acids; classification of proteins based on structure and functions; Nucleic acids -types, structure and function of DNA and RNA

#### **Unit III: Genes to Proteins**

Gene, Genome and chromosome; Central dogma of molecular biology; Classical experiments of DNA: Griffith and, Avery, McCarty and MacLeod, Meselson and Stahl - DNA replication, Transcription and Translation

#### **Unit IV: Microbiology**

Microscopy; Microbes as infectious agents - malaria, tuberculosis, typhoid, polio, dengue, AIDS;; cultivation of bacteria. Immunity - innate and acquired immunity - organs and cells of the immune system classification of antibodies - types of T cells - transplantation, autoimmunity overview

#### **Unit V: Applications of Biology**

Healthcare-antibiotics, vaccines, monoclonal antibodies, insulin and interferon; Beneficial bacteria probiotic bacteria, nitrogen fixing bacteria, fermentation and fermented foods and products Environmental waste water treatment, bioremediation; Biomaterials and biopolymers for medical and environmental applications; Biosensors;

USS19D151English For 7	abnical Communication	L	Т	Р	Credit
IISSI6KI5IEligiisii Fül I		2	0	2	3
Pre-requisite: Nil	Course Category: H	Humar	nities a	and Soc	ial science
	Course Type : T	heory	with I	Practica	ıl

#### **Course Objective(s)**

To help the learner develop listening skills by providing them with inspiring material; To help the acquire the ability to speak comfortably in real-life situations; To inculcate in students a taste learner for English so that they take to reading novels, dailies, and motivational books and dailies; To help learners passionately improve their vocabulary; To enable students to write all kinds of letters, job applications, and reports; To help learners sit for the BEC Examinations.

#### **Course Outcome(s)**

After Successful completion of course, the students will be able to,

**CO1:** Learn to speak good English covering their day to day activities

**CO2:** Understand the importance of Listening in order to communicate well

**CO3:** Make Situational Dialogues on emerging multiple situations

CO4: Learn the importance of Reading aloud Newspapers and other Texts

**CO5:** Compose effective error free composition

#### Mapping of Course Outcome(s):

CO/PO							PO					
	1	2	3	4	5	6	7	8	9	10	11	12
C01.		М										
CO2.			М

CO5.											М	

#### **Unit I: Focus on Language and Communication**

What is Communication? Verbal and Non-verbal communication -- Cloze reading -- Skimming-Scanning-Letters - Leave, Permission, Apology and Informal Letters - Spoken English - Meeting; parting; Meeting at a train station – Asking questions at the train station; Meeting at the airport; getting information at the airport- Definitions for technical terms - Etymology of Scientific Terms - Parts of Speech - Tenses -(Practical)- Preparing a short profile.

#### **Unit II: Listening Skills**

Listening Comprehension - Listening to an audio -Types of Listening & Tips for Effective Listening. -Dialogue Writing - Telephonic Conversation. Major English Accents - British Accent (BBC) - American Accent (CNN) - Indian Accent (Doordharshan, NDTV, etc). Language Focus - Articles - Prepositions -Numerical Adjectives--(Practical) - Listening to Received Pronunciation.

#### **Unit III: Speaking Skills**

Giving Instructions – Recommendations – Situational Conversations using the telephone; getting help in stores; going shopping; talking about shopping; shopping for clothes; asking about prices; Role plays -Communicating Politely- Oral Presentation Strategies - O<sub>2</sub>r<sub>0</sub>ganizing Contents -. Language Focus - Verbs transitive & intransitive - Active Voice & Passive Voice - Direct Speech - Indirect Speech-(Practical) -Narrating events /stories.

12 Hours

#### 12 Hours

#### 12 Hours

#### Unit IV: Reading Skills

Converting newspaper headlines into sentences - Note-making - Outline/Linear Method of Note-making - Sentence Method of Note-making - Schematic/Mapping Method of Note-making. Creative Writing - Language Focus - Jumbled Sentences – Summary Writing – Replacing words with the noun forms of verbs - Conditional Clauses (Practical) Guessing Meaning from context.

#### **Unit V: Writing Skills**

Dialogue Writing – Telephone conversation - Use of Abbreviations - Avoiding clichés, jargons and foreign words –Paragraph development - Kinds of Paragraphs - Effective Construction of Paragraphs, - Process Description - Language Focus - Comparison of Adjectives-(Practical)-Story Writing–Anecdote.

MEC18R151 Engineering Graphi	ics & Design	L	Т	Р	Total		
		3	0	2	3		
Dro roquisito: Nil	Cour	se Categ	ory: Basi	c Engine	ering		
	<b>Course Type</b> : Theory with Practica						

#### **Course Objective(s)**

This course aims to introduce the concept of graphic communication, develop the drawing skills for communicating concepts, ideas and designs of engineering products, Demonstrate skills in interpreting, and producing engineering drawings accurately and to give exposure to national standards relating to engineering drawing

#### **Course Outcome(s)**

After completing this course, the student will be able to:

CO1: Create the projection of points in all quadrants and straight lines

CO2: Construct the projections of planes and solid objects with refer to reference planes

CO3: Illustrate the true shape of truncated solids in both the manual and computerized manner

CO4: Develop surfaces of truncated solids in both the manual and computerized man

CO5: Apply orthographic and isometric projections in both the manual and computerized man

#### Mapping of Course Outcome(s)

# **Unit I: Projection of Points and Straight Lines**

Importance of graphics – use of drafting instruments – BIS conventions and specifications – size, layout and folding of drawing sheets – lettering dimensioning and scales - Projection of points, located in all quadrants - projection of straight lines located in the first quadrant, determination of true lengths and true inclinations

# Unit II: Projection of Planes and Solids

Projection of polygonal surface and circular lamina located in first quadrant inclined to one or both reference planes-Projection of solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method

# **Unit III: Section of Solids**

Section of simple solids like prisms, pyramids, cylinder and cone in vertical position by cutting planes inclined to any one of the reference planes, obtaining true shape of section

#### **Unit IV: Development of Surfaces**

Development of lateral surfaces of simple and truncated solids - prisms, pyramids, cylinders and cones

# 9 Hours

9 Hours

### 9 Hours

#### **Unit V: Orthographic and Isometric Projection**

#### 9 Hours

Orthographic principles – missing view - free hand sketching in first angle projection from pictorial views. Principles of isometric projection – isometric view and projections of simple solids, truncated prisms, pyramids, cylinders and cones. Introduction to CAD software – menus and tools – drafting platform demonstration

### List of Experiments

- 1. Construction of conic sections using CAD software
- 2. Construction of simple planes using exclusive commands like extend, trim etc.,
- 3. Construction of 3D model solids and sectional views
- 4. Generating 2D orthographic blue prints from 3D part models
- 5. Vectorization of simple building plan and elevation

# **Course Objective(s)**

To focus the fundamental ideas of the Electrical and Electronics Engineering by providing wide exposure to the basic concepts of Electrical and Electronics Engineering such as DC Circuits, AC Circuits, electrical machines, measuring instruments, Basic Electronic Devices and various electronic circuits such as rectifiers, amplifiers, oscillators, etc.

# Course Outcome(s):

After completing this course, the student will be able to:

**CO1:** Apply the basic laws of electricity in DC and AC circuits

**CO2:** Describe the construction and operation of static and rotating electrical machines

- **CO3:** Explain the functioning of measuring instruments  $and_{24}develop$  the basic domestic wiring circuit.
- **CO4:** Describe the constructional features and operation of fundamental electronic devices
- **CO5:** Explain the characteristics of electronic circuits

#### **Unit 1: DC Circuits and AC Circuits**

Electrical quantities - resistors - inductors - capacitors - Ohm's Law - Kirchhoff's Laws - series and parallel circuits - analysis of DC circuits - mesh, nodal - simple problems- Sinusoidal functions - phase representation - RMS and Average values - form and peak factors - RLC series circuits - power and power factor-concept of three phase system.

### **Unit 2: Electrical Machines**

Construction and principle of operation of DC machines - generator, motor - single phase transformers - alternators - three phase and single phase induction motors.

#### Unit 3: Measurement Instruments and Wiring Circuits

Moving coil and moving iron instruments - dynamometer type wattmeter - induction type energy meter, Domestic wiring - accessories - types - staircase wiring - fluorescent tube circuits - simple layout –grounding

#### **Unit 4: Electronic Devices**

Basic concepts of PN junction diodes - Zener diode - bipolar junction transistor - uni-polar devices - FET, MOSFET, UJT - Thyristor–SCR and Triac, Photoelectric Devices-Photo diode and Photo transistor

# **Unit 5: Electronic Circuits**

Half wave and full wave rectifier –Transistor as an amplifier –RC- phase shift oscillator - RC integrator and differentiator circuits - diode clampers and clippers - multi vibrators - Schmitt trigger

#### **Unit I: Introduction to Programming**

#### 12 hours

Introduction to components of a computer system (disks, memory, processor, where a program is stored and executed, operating system, compilers etc.), Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/ Pseudo code with examples, From algorithms to

programs; source code, variables (with data types) variables and memory, locations, Syntax and Logical Errors in compilation, object and executable code, Arithmetic expressions and precedence, Conditional Branching and Loops, Writing and evaluation of conditionals and consequent branching, Iteration and loops.

#### **Unit II: Arrays and Strings**

Introduction - One dimensional and two dimensional arrays – Declaration of arrays – Initializing and Accessing array elements – Strings: One dimensional character arrays - Declaration and String Initialization - String Manipulation - Multidimensional Arrays - Arrays of Strings

#### Unit III: Basic Algorithms

Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of equations, notion of order of complexity through example programs (no formal definition required)

### **Unit IV: Function**

Functions (including using built in libraries), Parameter passing in functions, call by value, passing arrays to functions: idea of call by reference, Recursion, Recursion, as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function etc. Quick sort or Merge sort.

### Unit V: Structure, Pointers & File Handling

Structures, Defining structures and Array of Structures, Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation), File handling (only if time is available, otherwise should be done as part of the lab)

### **Text Books**

(i) Byron Gottfried, Schism's Outline of Programming with C, McGraw-Hill

#### Objectives

Students would be introduced to fundamentals of Engineering Mechanics with emphasis on force Systems, axioms, dynamics of rigid bodies. Second part of the course would be an introduction to Solid Mechanics and students would be introduced to basic concepts of mechanics of deformable media: concept of stress tensor, strain tensor, strain rates, constitutive relations, and Applications to one/two dimensional problems.

### **Course Outcome(s):**

After completing this course, the student will be able to:

CO1: Explain the basic concepts motion in Cartesian and cylindrical coordinates

**CO2:** Application of various loads in motion on bodies

CO3: Interpret the idea of motion and forces in bodies

CO4: Demonstrate mathematically of loads on columns

**CO5:** Analyze various beams and loads

# Mapping of Course Outcome(s):

#### **Unit-I Motions Of Bodies**

Introduction, Point Kinematics: Moving point in various coordinate systems (Cartesian, Cylindrical, Path) rigid body kinematics: Translation and rotation, relative motion, angular velocity, General motion of a rigid body, General relative motion

# **Unit-II Dynamic Analysis of Solid Bodies**

Equivalent force systems, Resultant forces, Linear and Angular Momentum, Laws of motion (Euler's Axioms), Free Body Diagrams, Dynamics of point mass models of bodies. Equilibrium of rigid bodies, distributed forces, Analysis of structures: Trusses, Forces in Beams: Shear Force and Bending Moment

#### **Unit-III Mechanical Motion of Solid Bodies**

Frictional forces, Laws of Coulomb friction, impending motion. Inertia tensor, Principal Moments of Inertia, Moment of momentum relations for rigid bodies, Euler's Equations of Motion

#### **Unit-IV Principal Stresses and Strains**

State of stress at a point, equations of motion, principal stress, maximum shear stress, Concept of strain, strain displacement relations, compatibility conditions, principal strains, transformation of stress/strain tensor, state of plane stress/strain.

#### **Unit-V Deflection of Beams**

Uniaxial stress and strain analysis of bars, thermal stresses, Torsion of circular bars and thin walled members, Bending of straight/curves beams, transverse shear stresses, deflection of beams, Buckling of columns

- 7. Welding (arc welding & gas welding), brazing (1 lecture)

#### Suggested Text/Reference Books:

(i) Hajra Choudhury S.K., Hajra Choudhury A.K. and Nirjhar Roy S.K., "Elements of Workshop Technology", Vol. I 2008 and Vol. II 2010, Media promoters and Publisher's private limited, Mumbai.
(ii) Kalpakjian S. And Steven S. Schmidt, "Manufacturing Engineering and Technology", 4th edition, Pearson Education India Edition, 2002.
(iii)Gowri P. Hariharan and A. Suresh Babu,"Manufacturing Technology – I" Pearson Education, 2008.
(iv) Roy A. Lindberg, "Processes and Materials of Manufacture", 4th edition, Prentice Hall India, 1998.

(v) Rao P.N., "Manufacturing Technology", Vol. I and Vol. II, Tata McGraw-Hill House, 2017.

#### **Course Outcomes**

Upon completion of this course, the students will gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using different materials.

#### (ii) Workshop Practice:

- 1. Machine shop (10 hours)
- **2.** Fitting shop (**8 hours**)
- 3. Carpentry (6 hours)
- 4. Welding shop (8 hours (Arc welding 4 hrs + gas welding 4 hrs)
- 5. Casting (8 hours)
- 6. Smith (6 hours)
- 7. Plastic moulding & Glass Cutting (6 hours)

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

### Laboratory Outcomes

• Upon completion of this laboratory course, students will be able to fabricate Components with their own hands.

- They will also get practical knowledge of the dimensional accuracies and dimensional Tolerances possible with different manufacturing processes.
- By assembling different components, they will be able to produce small devices of their interest

	CHE10D 271 Madanial Salar as		L	Т	P	C				
	3	0	2	4						
Pre-requisite:	Course Category: Basic Engineering									
	Course Type: Integrated Course									

#### Course Objective(s)

The objective of the course will be to give the students a basic introduction to the different classes of materials relevant to engineering in general, and Chemical Engineering in particular. The intent of the course will be to relate the underlying molecular structure of the materials to their physical and chemical properties, and their processing and performance characteristics.

# **Course Outcomes(s)**

At the end of the course the students would be able to

**CO1:** Explain the properties of material.

**CO2:** Describe the characteristics of solids.

CO3: Analyze Material structures and corrosion prevention.

CO4: Explain about semi-crystalline Materials.

**CO5:** Analyze the Experimental Techniques.

#### Mapping of Course Outcome(s):

CO4		L	М									
CO5		L					М				М	Н

#### Unit I: Introduction to Material

Introduction to materials, bonding between atoms: metallic bonding, ionic bonding, covalent bonding,

Van der Waals bond, thermal expansion, elastic modulus and melting point of materials, Role of materials selection in design, structure-property-processing-performance relationships, Miller indices of directions and planes, packing of atoms inside solids, close-packed structures, structure of ceramics, ionic solids, glass and polymers, density of various materials.

# **Unit II: Imperfection in solids**

Vacancies, equilibrium concentration of vacancies, interstitial and substitution impurities in solids, dislocations, types and characteristics of dislocations, interfacial defects, stacking faults

# **Unit III: Structure of materials and Strength of Materials**

Yield strength, tensile strength and ductility of materials: stress strain behavior of metals, ceramics and polymers, tensile test, plastic deformation, necking, creep behavior and fatigue, Corrosion, Degradation and Recycling

# Unit IV: Semi-crystalline material

Classification, structure and configuration of ceramics, polymers, copolymers, liquid crystals and amphiphiles, glass transition temperature, visco elasticity.

# **Unit V: Bio and Experimental Techniques**

Biomaterials, material related to catalyst such as zeolites, silica etc. and other selected materials, XRD, NMR, PSA, etc. for material characterization highlighting links between molecular structure and macroscopic properties

# **Text Book(s):**

### **UNIT1: Introduction**

### **12Hours**

Relevance of fluid and particle mechanics, and mechanical operations, in chemical engineering processes, Solid particle characterization: Particle size, shape and their distribution; Relationship among shape factors and particle dimensions; Specific surface area; Measu<sup>3</sup>ement of surface area,Screen analysis,Screen Effectiveness.

### **UNIT 2: Size Reduction**

Principles of size reduction - Specific properties of solids for size reduction - Energy required For size reduction - Crushing and grinding efficiency - Laws of crushing - Classification of crushing and grinding equipment - Construction and working principle of mostly used equipments - Size enlargement Size enlargement, Nucleation and growth of particles.

### **UNIT 3: Conveying**

Conveying of bulk solids: Classification of conveyors - Selection of conveyors, Transport of fluid solid systems, Pneumatic and Hydraulic Conveying

### **UNIT 4: Sedimentation and separation**

Free Settling, hindered settling, Richardson-Zaki equation, design of settling tanks Mechanical classification and classifiers-Rare and dense medium separation- Magnetic separation- Electrostatic separation -Centrifugal separation - Electrostatic precipitators - Impingement separators - Gas solids separation -Cyclone separators-Bag filters scrubbers

### **UNIT 5: Mixing, Blending and Filtration**

Mixing of solids, blending, kneading - Power for agitation -Correlations for power consumption-Filtration- Batch and continuous filtration, compressible and incompressible filter cakes- Calculations for specific cake resistance, filter medium resistance-Industrial filters-Centrifugal filtration

### **UNIT 1: Fluid Statics**

Properties of fluids and concept of pressure - Introduction - Nature of fluids - Physical properties of fluids - Types of fluids - Fluid statics - Pressure, density, height relationships - Pressure Measurement - Units and Dimensions- Dimensional analysis- Similarity, forces arising out of physical similarity - Dimensionless numbers

### **UNIT 2: Mass and Momentum Balance**

Momentum balance and their applications - Kinematics of fluid flow, stream line, stream tube, velocity potential - Newtonian and non-Newtonian fluids, Time dependent fluids - Reynolds number, experiment and significance - Momentum balance - Potential flow - Euler's equation of motion- Bernoulli's equation.

### UNIT 3: System and control volume approaches

Reynolds transport theorem, Flow of incompressible fluids in pipes turbulent flow through closed  $\frac{38}{38}$  conduits, velocity profile and friction factor for smooth and rough pipes - Head loss due to friction in pipes, fitting, Moody diagram.

## 12Hours

**12Hours** 

### **UNIT 4: Flow past Immersed Objects**

Flow of fluids through solids - Form drag - Skin drag - Drag coefficient - Flow around solids and packed beds, Friction factor for packed beds, Ergun's Equation - Motion of particles through fluids - Motion under gravitational and centrifugal fields -Terminal settling velocity - Fluidization , mechanism, types, general properties and applications

### **UNIT 5: Transportation and Metering Of Fluids**

Transportation and metering - Measurement of fluid flow, orifice meter, venturi meter, pilot tube, rotameter, weirs and notches, wet gas meter and dry gas meter, hot wire and hot film anemometers - Transportation of fluids, fluid moving machinery performance, selection and specification - Air lift and diaphragm pump, Positive displacement pumps, rotary pumps - Reciprocating pumps - Centrifugal pumps and characteristics.

### **UNIT1: Conduction**

Governing equation in Cartesian, cylindrical and spherical coordinates. 1-D steady state heat conduction with and without heat generation. Composite wall- electrical analogy – critical thickness of insulation – heat transfer from extended surface – effect of temperature on conductivity- 1-D transient analysis

### **UNIT 2: Convection**

Review of basic equations of fluid flow – dimensional analysis- forced convection – laminar flow over flat plate and flow through pipes-flow across tube banks. Turbulent flow over flat plate and flow through pipes – free convection – heat transfer from vertical plate using integral method – empirical relations – types of heat exchangers – overall heat transfer coefficient – LMTD and NTU methods of analysis.

### **UNIT3: Radiation**

Basic definitions – concept of black body – laws of black body radiation-radiation between black surfaces – radiation heat exchange between grey surfaces – radiation shielding – shape factor- electrical network analogy in thermal radiation systems.

### UNIT 4: Heat transfer with phase change:

Boiling of liquids, Pool boiling curve, different types of pool boiling, condensation of vapor. Film wise & drop wise condensation.

40

CHE18R372 Chemical Reaction Engineering		3	0	2	4	
Pre-requisite:	Course Category: Program Core					
	Cour	se Type	e: Integ	rated C	Course	

### **Course Objective(s):**

To understand the design concept of reactors and able to analyze the effect of temperature and pressure.

#### **Course Outcomes(s):**

At the end of the course the students would be able to

CO1: Explain the concepts of reactor design and reaction kinetics

CO2: Interpret reactor data

CO3: Identify ideal reactors and explain various aspects of design for single reactions

CO4: Explain various aspects of design for multiple reactions

CO 5: Analyze non ideal behavior of reactors with suitable models

### Mapping of course outcomes:

СО/РО	PO											
	1	2	3	4	5	6	7	8	9	10	11	12

CO4	Η		Н	Н				М	М		L	
CO5	Η		Н	Н				М			М	L
Unit 1: Re	action I	Kinetics	5								9 Ho	ours

### **Unit 1: Reaction Kinetics**

Chemicalkinetics-Classificationofreactions, variables affecting rate of reaction, definition of reaction rate-Kineticsofhomogeneousreactions-Concentrationdependanttermsofrateequation-Elementary nonand elementary reactions, kinetic view of equilibrium for elementary reactions-Molecularity and order ofreaction, representation of reaction rates-Testingkinetics models-Temperature dependency of rate-Rate of reaction predicted by theories

### **Unit 2: Interpretation of Reactor Data and Rate Equation**

Interpretationsofreactordata-Constantvolumebatchreactor-Integralmethodsofanalysis-Autocatalytic reactions-First and second order reversible reactions- Differential method of analysis-Variable volume batch reactor-Temperature and reaction rate-Search for rate equation

### **Unit 3: Ideal Reactors**

Ideal Reactors -Reactor design, batch reactor, semi batch reactor, single ideal reactors-Performance equations for batch, plug, mixed reactor- Design for simple reactions - Size comparison of single reactors, general graphical comparison- Multiple reactor systems- Mixed flow reactor of different type in series-Reactors of different types in series-Recycle reactor-Autocatalytic reactions

### **Unit 4: Multiple Reactions**

Design of reactor for multiple reactions - Reaction in series and parallel-Qualitative and quantitative treatment about product distribution- Successive irreversible reactions of different orders-Semi-parallel

#### 9 Hours

#### 9 Hours

### 9Hours

### 43

reactions, kinetics of series-parallel reactions

#### Unit 5: RTD Series

Basics of non ideal flow- RTD in non ideal flow; non ideal flow models- Tank in series model and Axial Dispersion Model, conversion in non ideal reactors

### **Total :45 Hours**

CO5												М

### **UNIT 1:Pressure Vessels**

Design of High Pressure Systems - Design of high pressure vessels (internal and external pressures) - Vessel accessories - Nozzles, flanges, openings and reinfor <sup>4</sup> <sup>4</sup> <sup>4</sup> ements and supports of vessels

UNIT 2: Heat Transfer Equipments 12Hours
Process Design of Heat Exchangers - DPHE and types of heat exchanger - Shell and tube heat
exchanger- Process design of evaporator, types of evaporator, methods of feeding evaporators
Design of evaporator - Crystallizer design, types of crystallizer - Design of Crystallizer
UNIT 3: Mass Transfer Equipments 12Hours
Design of mass transfer equipments - Distillation and absorption (plate and packed) - Extraction
columns - Process Design of dryer, design of rotary dryer and cooling towers.
UNIT4: Design Of Reactors 12Hours
Design of Reactors - Design and steady state operation of monolithic structures -Fixed bed -
Fluidized bed- Gas liquid and slurry reactors
UNIT 5: JacketedVessels 12Hours
Design of Process Equipment - Drawing of simple process equipments like jacketed reaction
vessels and reboilers
Total: 60Hours

### **Course Objective(s):**

To understand the Calculation of Diffusion and the Phase Differences For a Liquid Solid Contraction.

### **CourseOutcomes(s):**

At theend of the course the students would be able to

CO1: Understand and solve diffusion and diffusion related problems

CO2:Estimate mass transfercoefficientsforgas-liquid contactingsystems and know about various analogies

**CO3:**know and understand about theconceptsofdesigningtheabsorptioncolumn and the application of the same in numerical problems

CO4: Able to solve designproblems related to adsorption

**CO5:** To study about psychometric applydesign calculationsofcoolingtower

45

CO5		L	Н	Η	Μ							

### **UNIT 1: Diffusion**

Molecular and eddy diffusion in gases and liquids - Steady state diffusion under stagnant and laminar flowconditions-Diffusivitymeasurementandprediction-Multicomponentdiffusion- Diffusion in solids and its applications

### **UNIT 2: Mass transfer coefficients**

Concept of mass transfer coefficients- Mass transfer under laminar and turbulent flow past solids- Boundary layers-Masstransferatfluidssurfacescorrelationofmasstransfercoefficients-jD -Theories of mass transferandtheirapplications-Interphasemasstransferandoverallmasstransfercoefficientsinbinary and multicomponent systems-Application togas-liquid andliquid-liquid systems-Analogies in Mass Transfer, Reynolds, Chilton-Colburn-Prandtl, VonKarman Analogy.

### **UNIT 3: Design Calculation Of Distillation**

Design calculations by McCabe-Thiele and Ponchon-Savarit-Methods; continuous contact distillation tower (packed tower) design -Extractive and azeotropic-Distillation low pressure distillation -Steam distillation

### **UNIT 4: Absorption**

Equilibrium and operating line concept in absorption calculations -Types of contactors-Design of packed and plate type absorbers-Operating characteristics of stagewise and differential contactors, concepts of NTU-HTU and overall volumetric mass transfer coefficients-Multicomponent absorption, mechanism and model of absorption with chemical reaction -Thermal effects in absorption process

### **UNIT 5: Humidification**

Basic concepts- psychrometric chart construction - Humidification and dehumidification operations, design calculations - Cooling towerprinciple and operation, types of equipment, design calculations

### **Total:45Hours**

### **UNIT1: Distillation**

Vapour-liquidequilibria-Raoult'slawanddeviationsfromideality- Methodsofdistillation- fractionation of binaryandmulticomponent system;

### **UNIT 2: Adsorption**

Theoriesofadsorption of gases and liquids-Industrial adsorbents-Adsorption equipment for batch and continuous operation-Design calculation of ion-exchange resins, principle of ion-exchange, industrial equipment

### UNIT3: Liquid liquid extraction andLeaching

Equilibrium internary systems - Equilibrium stagewise contact calculations for batch and continuous extractors-Differentialcontactextractionequipment- Spray-packedandmechanicallyagitatedcontactors and their design calculations - Pulsed extractors - centrifugal extractors - Solid-liquid equilibria; leaching equipment-Batch and continuous types; calculation of number of stages

### **UNIT 4: Drying&Crystallization**

Theory andmechanismof drying -Drying characteristics of materials -Batch and continuous drying -Calculationforcontinuousdrying-Dryingequipment- Design and performance ofvariousdryingequipments Nuclei formation and crystal growth - Theory of crystallization -Growthcoefficientsandthefactors affecting these in crystallization - Batch and continuous industrial cr4y7stallizers - Principle of design of equipment

### UNIT 1: Solution of Equations and EigenValueProblems

Review of open end methods, bracketed end methods - The intermediate theorem (excluding proof) -Iterative method, False position method, Newton - Raphson method for single variable and for simultaneous equations with two variables - Solutions of a linear system by Gaussian, Gauss-Jordan, Jacobi and Gauss - Seidel methods - Eigen value of a matrix by Power Method

### UNIT 2: Interpolation, Numerical DifferentiationandIntegration

Newton forward and backward difference formulae - Newton's divided difference formulae - Lagrange's polynomials - Numerical differentiation with interpolation polynomials - Numerical integration by Trapezoidal and Simpson's (both 1/3rd and 3/8th)rules

### UNIT3: FiniteElementMethods

Line segment element - triangular element - rectangular element - quadrilateral element - tetrahedron element - hexahedron element - curved boundary element - Numerical integration over finite elements -Ritz finite element method - Least square finite element method - Galerkin finite element method convergence analysis

### UNIT4: Initial Value Problems for OrdinaryDifferentialEquations

Single step Methods - Taylor Series, Euler and Modified Euler, Runge - Kutta method of order four for first and second order differential equations - Multistep Method-Milne predictor and corrector method

### UNIT5: Boundary Value ProblemsforPDE

Finite difference solution for the second order ordinary differential equations - Finite difference solution for one dimensional heat equation (both implicit and explicit), One-dimensional wave equation and two- dimensional Laplace and Poisson equation

### **UNIT 1:Introduction**

Introduction to modeling and simulation, classification of mathematical models, conservationequations and auxiliary relations.

### **UNIT 2: Steady State Lumped Systems**

Degree of freedom analysis, single and network of process units, systems yielding linear and non-linear algebraic equations, flow sheeting – sequential modular and equation oriented approach, tearing, partitioning and precedence ordering, solution of linear and non-linear algebraic equations.

### UNIT 3: Unsteady State Lumped Systems

Characteristics for through pipe analysis of liquid level tank, gravity flow tank, jacketed stirred tank heater, reactors, flash and distillation column, solution of ODE initial value problems, matrix differential equations,

53

### 4 Hours

9 Hours

### simulation of closed loop systems.

### **UNIT 4: Steady State Distributed System**

Analysis of compressible flow, heat exchanger, packed columns, plug flow reactor, solution of ODE boundary valueproblems.

### **UNIT 5: Unsteady State Distributed System**

Analysis laminar flow in pipe, sedimentation, boundary layer flow, conduction, heat exchanger, heat transfer in packed bed, diffusion, packed bed adsorption, plug flow reactor, hierarchy in model development, classification and solution of partial differential equations.

### **Other Modeling Approaches**

Empirical modeling, parameter estimation, population balance and stochastic modeling.

### **Course Objective(s)**

The objective of studying this course is to understand about what is colloid and colloidal state. It discusses about the preparation and properties of colloids. This chapter also discusses about the concepts in colloid and interfacial science, experimental techniques used to determine colloidal properties and interfacial phenomena. In overall this course highlight about the colloidal system in chemical engineering curriculum

### **Course Outcome(s):**

At the end of the course, students would be able to

CO1: Describe the colloidal state, including colloids and their preparation and properties.

CO2: Ability to discuss the fundamental concepts in colloid and interface science

CO3: Understand the impact factors that will affect the colloidal systems

CO4: Discuss important factors on solid/liquid interactions

CO5: Explain experimental techniques and used to determine colloidal properties; interfacial phenomena

### UNIT I - Basic Concepts of ColloidsandInterfaces

Introduction - Examples of Interfacial Phenomena - Solid-Fluid Interfaces - Colloids. Properties of Colloid Dispersion - Introduction-Sedimentation under Gravity - Sedimentation in a Centrifugal Field - Brownian Motion - Osmotic pressure - Optical properties - Electrical Properties - Rheological Properties of Colloid Dispersions.

### **UNIT II - Surfactants and Their Properties**

Introduction - Surfactants and their Properties - Emulsions and Micro emulsion - foams. Surface and Interfacial Tension: Introduction - Surface tension - Interfacial Tension - Contact Angle and Wetting - Shape of the Surfaces and interfaces.

### **UNIT III - Surface and Interfacial Tension**

Measurement of Surface and Interfacial Tension - Measurement of Contact Angle- Intermolecular and Surface Forces - Introduction, Vander walls Forces - Intermolecular and Surface Forces - Electrostatic double layer force the DLVO theory - Non-DLVO forces.

### **UNIT IV – Adsorption at Interfaces**

Introduction - The Gibbs Dividing surface - Gibbs Adsorption Equation - Langmuir and Frumkin Adsorption Isotherms, Surface Equation of state (EOS) - Effect of Salt on Adsorption of Surfactants.

### **UNIT V – Adsorption at Isotherms**

Adsorption Isotherms incorporating the Electrostatic Effects - Calculation of Free energy of Adsorption - Adsorption of inorganic salts at interfaces - Dynamics of Adsorption of Surfactants at the interfaces - Adsorption at Solid - Fluid interfaces.

### **Total: 45 Hours**

#### Pre- requisite:-CHE18R373–Process Equipment Design and drawing

### Course Category:-Professional core

**Course Type:-**Theory Course

### **Course Objective(s)**

Process Utilities and Pipeline Design is a Chemical Engineering subject which discusses about the various facilities required to carry out the Unit Operation and Unit Processes in a process industry. This chapter highlights the transport of process liquids water, air for pneumatic control in a pipeline and other auxillaries like steam, process water, blowers and compressors.

### **Course Outcome(s)**

After learning the course the students should be able to:

**CO1:** Learn about the overall knowledge about the process plant.

CO2: Understand the importance of process auxiliaries

CO3: Understand the significance of utilities in processindustries.

CO4: Learn the conceptual design of chemical processequipment.

**CO5:** Build a bridge between theoretical and practical concepts used for process auxiliaries and utilities in any process industry.

### Mapping of Course Outcome(s):

CO/PO				PO								
	1	2	3	4	5	6	7	8	9	10	11	12

CO2		Н			М							
CO3					М		L					
CO4	Н			Н								
CO5	М		Н		М							
UNIT 1: -]	JT 1: -Process Water 9Hours											

### **UNIT 1: -Process Water**

Process Water: Sources of water, hard and soft water, Requisites of industrial water and its uses, Methods of water treatment, Chemical softening, Demineralization, Resins used for water softening, Water for boiler use, cooling purposes, cooling towers, drinking and process water treatment, reuse and conservation of water, 27.50% water resources management, waste water treatment and disposal.

### **UNIT2:-Steam**

Steam: Steam generation and its application in chemical process plants, distribution and utilization, boilers, design of efficient steam heating systems, steam economy, condensate utilization, steam traps, their characteristics, selection and application, waste heat utilization

### **UNIT 3: -Pipeline Design**

Piping design: Selection of material, pipe sizes, working pressure, Basic principles of piping design, piping drawings, pipe installations, overhead installations, Process steam piping, selection and determination of steam - pipe size, Piping insulation, application of piping insulation, weather proof and fire resisting pipe insulation jackets, piping fittings, pipe joints.

56

# 9Hours

### .UNIT4: Compressors and Vacuum Pumps

Compressors and Vacuum Pumps: Types of compressors and vacuum pumps and their performance characteristics, Methods of vacuum development and their limitations, materials handling undervacuum, lubrication and oil removal in compressors and pumps, instrumentair.

### **UNIT 5: - Process Control**

Process control and instrumentation diagram, control system design for process auxiliaries, Refrigeration and Chilling systems Oil heating systems, Nitrogen systems- Valves: Types of valves, selection criteria of valves for various systems.

### Textbook (s):

	3	0	0	3						
Pre- requisite:-CHE18R272FluidMechanics	fession	al Cor	e							
CourseType : TheoryCours										

### **Course objective(s):**

The objective of the course is to apply the basic laws of fluid flow in process condition, boundary layer equations, the different of flow of fluids using Reynolds number, momentum integral equation and heat transfer in boundary layers.

### Course outcome(s) :

At the end of the course, the students would be able to

**CO1:** Apply the basic laws of fluid flow

CO2: Analyze boundary layer equations

CO3: Differentiate laminar and turbulent flows

**CO4:** Apply momentum integral equation

**CO5**: Explain heat transfer in boundary layers

### Mapping of Course Outcome (s):

#### 9 Hours

### UNIT 1: Basic laws of Fluid Flow

### Basic laws of fluid flow - Continuity, momentum and energy equations applied to system and control volume - Concepts of flow fields - Flow around bodies - Moment of momentum theorem and its application to fixed and moving vanes - Hot wire and laser Doppler anemometry

### **UNIT 2: - Development of Boundary Layer**

Development of boundary layer- Estimation of boundary layer thickness, Displacement thickness, Momentum and energy thicknesses for twodimensionalflow- Discussion of Navier Stokes equations -Two dimensional boundary layer equations - Blasiussolution.

### **UNIT 3:- Laminar and Turbulent Flows**

Laminar and turbulent flows on a flat plate - Laminar and turbulent boundary layers - Transition from laminar to turbulent boundarylayers

### **UNIT 4: - MomentumIntegralEquation**

Momentum Integral Equation for boundary layer flow - Introduction to ax symmetric and three dimensional boundary layer equations - Von Karman -Polhausenmethod

### **UNIT 5: Introduction To Heat Transfer InBoundaryLavers**

Introduction to heat transfer in boundary layers - Thermal boundary layer - Turbulent boundary layer on a flat plate - Flows in pressure gradient - Boundarylayercontrol

### **TextBook(s):**

1.Panton, Ronald L -Incompressible Flow - John Wiley and Sons - Singapore 2013 (4th Edition) 2. Anderson, D - Fundamentalsof Aerodynamics - McGraw Hill Science - New York, 2005. (4th Edition)

### **Course Objective (s):**

The objective of the course is to understand about the nanomaterials, nanodevices and nanostructure characteristics identify about the electron microscopic techniques, the mechanism of mesoscopic magnetism, application of nanotechnology in nanoelectronics, biomolecular motiors and drug delivery nanodevice.

### **Course outcome (s) :**

At the end of the course, the students would be able to

CO1: Explain the characteristics of nanomaterials, nanodevices and nanostructures

**CO2**: Identify various Electron MicroscopyTechniques

CO3: Describe the mechanism of Mesoscopic magnetism

**CO4**: Elucidate the applications of nanotechnology in nanoelectronics

**CO5**: Suggest a suitable Bio molecular motors & drug delivery nanodevice

### **UNIT 1: Nanomaterials**

Nanomaterials - Types, nanowires, nanotubes, fullerenes, quantum dots, dendrimers, Nanocomposites -Properties - Methods of preparation - Top down, bottom up.

### **UNIT2: ElectronMicroscopyTechniques**

Electron Microscopy Techniques - SEM, TEM, X-ray methods - Optical Methods Fluorescence Microscopy -Single molecule Surface Enhanced Resonance Raman Spectroscopy - Atomic Force Microscopy, MRI, STM andSPM

### **UNIT3:Mesoscopic Magnetism**

Mesoscopic magnetism - Magnetic measurements miniature hall detectors, Integrated DC SQUID Microsusceptometry - Magnetic recording technology - Biological Magnets

### **UNIT4: BasicsofNanoelectronics**

Basics of nanoelectronics - Single Electron Transistor, Quantum Computation - Parallelarchitecture for nanosystems - Nanolithography, basic structures and integrated structures - MEMSandNEMS - Dynamics of NEMS - Limits of integrated electronics.

### **UNIT 5: BioMolecularMotors**

Biological structures and functions - Biomolecular motors, drug delivery systems - Nan fluidics **Text Book (s):**

CO5		Н										
UNIT1:In	troduct	ion						•	•	•	9Ho	urs

### **UNIT1:Introduction**

The concept of green Technology; evolution; nature, scope, importance and types; developing a theory; green Technology in India; relevance in twenty first century.

### **UNIT2:** Sustainability&Environment

Organizational environment; internal and external environment; Indian corporate structure and environment; how to go green; spreading the concept in organization; Environmental and sustainability issues for the production of high-techcomponents and materials, life cycle analysis of materials, sustainable production and its role in corporate social responsibility (CSR) and corporate environmental responsibility (CER).

### **UNIT3:EcosystemApproaches**

Approaches from ecological economics; indicators of sustainability; ecosystem services and their sustainable use; bio-diversity; Indian perspective; alternate theories.

### **UNIT 4: Acts of Green Technology**

Environmental reporting and ISO 14001; climate change business and ISO 14064; green financing; financial initiative by UNEP; green energy Technology; green product Technology.

### **UNIT5:GreenEconomics**

Definition; green techniques and methods; green tax incentives and rebates (to green projects and companies); green project Technology in action; business redesign; eco-commercemodels.

CO4					Н							
CO5		Н										

#### **UNIT1: Introduction**

Introduction- Origin, occurrence of petroleum, elementary ideas of gasand liquidreservoirs -Petroleum refining processes- General processing, topping and vacuum distillations - Thermal cracking in vapor, liquid and mixed phase - Thermal reforming and polyforming

### **UNIT 2:**Catalyticcracking

Catalytic cracking- Fixed bed, fluidized bed, T.C.C - Houder flow etc - Catalytic reforming - Conversion of petroleum gases into motor fuel with special reference to alkylation polymerization, hydrogenation and dehydrogenation - Blending of petroleum products

### **UNIT 3: Production ofvariousfuels**

Production - Aviation gasoline, motor fuel, kerosene, diesel oil, tractor fuel and jet fuel, hydrodesulphurization

### **UNIT 4:Lubricating oil**

Lubricating oil manufacture - Vacuum distillation, solvent extraction and uses of lubricating oil- Petroleum waxes and asphalts - Elementary study of multi component distillation as applied to petroleumindustry

### **UNIT 5: Storage and transportation ofpetroleumproducts**

Octane number, Cetane number, Diesel index, their determination and importance - Storage of petroleum products tanks, bullets, special types of spheres etc - Transportation of petroleum products road, rail, sea and pipeline - Importance of pipelinetransportation

Pre- requisite: Nil

### **Course Objective (s):**

In process industry we need to measure the various parameters like pressure, temperature, flow, level etc in a closed place where the process fluids are present in the industry. For this purpose we need study about the instruments used to measure these parameters. This chapter discusses about the response of instruments and the knowledge about measurement of these parameters.

### **Course Outcome (s)**:

At the end of the course, students would be able to

CO1: Analyse the response of instruments.

**CO2:** Ability to integrate knowledge about the instrument used for Temperature.

CO3: Ability to assimilate the facts about instruments used for pressure.

**CO4:** Analyze the different flow of fluids based on its Concentration.

CO5: Evaluate the supporting process and its effects

### Mapping of Course Outcome (s):

### **UNIT1: PrinciplesofMeasurement**

Analysis: Measurement ofForce,StrainandTorque- Use of strain gauges. Transducers - Resistive, capacitive, Inductive and piezoelectric pickups. Staticand Dynamic response of Instruments. Errors inmeasurements.

### **UNIT 2:TemperatureMeasurement**

Liquid filled, Gas filled and Vapour pressure Thermometers. Bimetallic and Resistance thermo meters. Thermocouples and Thermistors. Optical and Radiation pyrometers.

### UNIT3:PressureMeasurement

Manometers, Bourdon gauge and Bellows gauge. Measurement of pressure and Vacuum. Use of Transducers

### UNIT4: Flow, Density andLevelMeasurements

Variable he a d flo w met er s. Area flo w met er s . Positive d is p la c e me nt met er s . Pressure P ro be s . Level measurements - Direct and Inertial types. Measurement of density and specific gravity. Instruments for weighing and feeding.

### **UNIT5: MiscellaneousMeasurements**

Analysis of gas mixtures. Thermal conductivity, Viscosity and Electrical conductivity. Supporting instrumentation - Standard cells,Gas Sensors, PH Measurement, Principles of Telemetering. P and Idiagram.

### **UNIT 1:Introduction**

Hamaker's analysis for interparticle attractive forces, Experiments verifying van der Waals interactions between surfaces, Lifshitz macroscopic theory for the Hamaker constant, Parsegian, Ninham's approximation to Lifshitz theory, Casimir and Polder's correction for relaxation effects, Example calculations of Hamaker constants for several specific metal, polymer, and ceramic systems, the influence of other types of interparticle forces

### UNIT2: Hierarchy Of SurfaceChemicalModels

The hierarchy of surface chemical models for surface charging - Monoprotic surface charging systems Lattices and Organic acids, Metallic and Non,oxide Systems - The role of surface oxygen in dictating surface charge for metal and non-oxide ceramicsystems

### UNIT 3:ElectricDoubleLayer

The isolated electric double layer - Overlap of the double  ${}^{6}l^{3}$  ayer for interacting particles, free NRGs of isolated and interacting double layers, Repulsive NRG due to overlapping double layers - Derjaguin approximation for the interaction of spherical particles - Concept of the critical

#### 9Hours

#### 9Hours

coagulation concentration, Influence of salt concentration, ionic strength, and ionic size - Influence of surface charge for monoprotic surface charge systems - The role of surface charging in the dispersion of solids in non,aqueoussystems

### **UNIT4:Stabilization Of Particles With Non-IonicPolymers**

Criteria for stabilization of particles with non,ionic polymers - The role of polymer solubility in stabilization-The role of co, and ter, polymers in providing stabilization reconciling surface attachment with polymer extension from the surface, the impenetrable barrier model for polymeric stabilization - The compression model by Bagchi for polymeric dispersion, the interpenetration and compression model for polymericdispersion,OtherassumptionswithrespecttotherelativecontributionoftheHamakerconstant toward stabilization with polymers - Selection criteria for polymeric dispersants for specific types of material systems, Polymeric dispersion of nanometer size particles

#### UNIT5:FeaturesOfPolyelectrolyte

Features of polyelectrolyte that contribute to their dispersing power - pKa, molecular size and distribution, type of polymer - Criteria for polyelectrolyte adsorption to charged surfaces - The role of pKa - Monitoring adsorption via solution depletion, EM scattering, and zeta potential measurements, polyelectrolyte conformation at charged surfaces - Thecombinedelectrostaticand impenetrable barriermodel for dispersion of particles with polyelectrolytes - Some other concepts regarding "nonionic" dispersants in aqueous systems, interaction of polyelectrolytes with ionic species in solution

### **UNIT1:Fluid-SolidSystems**

Fluid-Solid systems - Mobile and stagnant solids, Flow through porous media, Capillary Tube model, Application for flow through packed bed, filters, fluidized beds, Solid-Fluid Convening, Settling and Sedimentation, Fluid-Fluid systems - Flow patterns and flow regimes - Analysis of annular, stratified and bubble flow - Formation of bubbles and drops - Their size distribution and volumedistribution

### UNIT2:Two -PhaseFlow

Two-phase cocurrent flow of gas liquid, Gas/Solid and Liquid/Liquid, Upward and Downward Flow in vertical pipes - Suspensions of sand, gravel coal etc., and their transport in horizontal Pipes - Drag reduction phenomena, Laminar, Turbulent, Creeping flow regimes - Suspension Rheology - Residence Time Distribution studies, Deterministic and stochastic flow system Models for chemical reactors, Prevention of circulatory flow - Role of draft tubes and wall baffles, Diffusion model and bubbling bed model for gas interchange and gas mixing - Axial mixingcorrelations

### **UNIT3: Theories Of Intensity And ScaleOf Turbulence**

Theories of intensity and scale of turbulence - Calculation of circulationvelocities and power consumption in agitated vessels for Newtonian/ Non Newtonian fluids - Blending and Mixing of phases - Power required for aeration to suspend to an immiscible liquid or solids in Slurry reactors -Segregation phenomena - Prediction of optimum speed of impeller rotor and Design criteria for scale up

### **UNIT4:Bubble Size inPipeFlow**

Prediction of holdup and pressure drop of volume fraction, Bubble size in pipe flow, Lockhart -Martinelli parameters - Bubble Column and its Design aspects - Minimum carryover velocity, Holdup ratios, Pressure drop and transport velocities and theirprediction

### **UNIT5 : Flow through Porous Media of Composite Mixtures**

Gas, Solid and Liquid composite slurries in horizontal and vertical pipes - Flow through Porous media of composite mixtures - Prediction of holdup, pressure drop and through put Velocities in 3 -Phase system -Designof multiphase contactors involvingfluidization, prevaporation, lyophilisation and permeation for solids, liquids and gases - Design and Development of Software programmes in multiphase flow - Simulation in packed and fluidized beds and Stirred tank process equipment - Selection of equipment for gaseous, particulate and liquid effluents of various as scrubbers, Stacks Absorbers, Combustion devices, industries such and Chimneys, Electrostatic precipitators and filtration / reverse osmosisdevices

CHE18P406 Fertilizer Technology For Chemical Engineers	L	Т	Р	Credit					
CHETOR400 Fertilizer Technology For Chemical Engineers	3	0	0	3					
Pre-requisite:Nil Course Cate	Course Category: Professional core								
Co	Course Type: Theory								

### **Course Objective(s):**

Indian economy is dominated by agriculture sector. Synthetic fertilizers are must for producing good crops.Hence it is needed to provide comprehensive and balanced understanding of essential link between chemistry and the synthetic fertilizer industry. It is therefore vital for chemical engineers to understand for each fertilizer product, its flow diagram for Industry production.

### **Course Outcome(s):**

After completing this course, the student will be able to:

CO1: Understand the global outlook of fertilizer resources

**CO2:** Elaborate the production processes of nitrogenous fertilizers

**CO3:** Understand the about phosphate fertilizer production

CO4: Understand the production processes of NPK fertilizers

**CO5:** Understand about the mixed fertilizers

### 9Hours

### **UNIT 1: Global Outlook Of Fertilizer Resources**

Role of organic manures and Chemical Fertilizers - Types of Chemical fertilizers, growth of fertilizer industry in India, their location, energy consumption in various fertilizer processes - materials of various fertilizer processes, materials consumption in fertilizer industry

### **UNIT 2: Nitrogenous Fertilizers**

Feed stock for production of Ammonia, Natural gas, associated gas, Coke oven gas A m m o n i u m S u l p h a t e , A m m o n i u m N i t r a t e , U r e a , Calcium Ammonia Nitrate, Ammonium chlorides - Methods of Production, characteristics and specification - Storage and handling

### **UNIT 3: Phosphate Fertilizer**

Raw materials for the manufacture of Phosphate fertilizer - Phosphate Rock, Sulphur, Pyrites etc - Processes for the production of Sulfuric and Phosphoric acid - Phosphate fertilizers, ground rockphosphate, bone meal, methods of production, characteristics and specifications for single super phosphate,triple super phosphate

### **UNIT 4: NPK Fertilizers**

NPK Fertilizers - Methods of production, Characteristics and specifications for complex fertilizers, methods of production of Ammonia phosphate, Sulphate, Di-ammonium phosphate and Nitro phosphates - NPK Fertilizers - Urea, Ammonium Phosphate, Monoammonium Phosphate and various grades of NPK fertilizers produced in the country

### **UNIT 5: Mixed Fertilizers**

Mixed fertilizers - Granulated mixtures - Biofertilizers - Secondary and Micro Nutrients, Fluid Fertilizers - Controlled release fertilizers - Pollution from fertilizer industry - Solid, liquid and gaseous pollution standards

### Text Book(s):

1. Slack. A. V - Chemistry and Technology of Fertilizers - Interscience - New York - 2005

2. Pozin. M. E - Fertilizer Manufacture - MIR Publishers - Moscow - 2006

### **Course Objective(s):**

To understand the basic water quality criteria and standards, and their relation to public health and Requirement distribution of water quality

### **CourseOutcomes(s):**

At theend of the course the students would be able to

CO1:An insight into the structure of drinking water supply systems.

CO2: Ability to Including water transport, treatment and distribution

CO3:An understanding of water quality criteria and standards, and their relation to public health

CO4: Ability to design and evaluate water supply project alternatives on basis of chosen selection criteria

**CO5:** Requirement distribution of water quality 68

### **UNIT 1: Planning For Water Supply System**

Public water supply system -Planning – Objectives -Design period – Population forecasting Water demand -Sources of water and their characteristics -Surface and Groundwater- Impounding Reservoir Well hydraulics -Development and selection of source – Water quality – Characterization and standards- Impact of climate change.

### **UNIT 2: Conveyance System**

Water supply -intake structures -Functions and drawings -Pipes and conduits for water- Pipe materials – Hydraulics of flow in pipes -Transmission main design -Laying, jointing and testing of pipes – Drawings appurtenances – Types and capacity of pumps -Selection of pumps and pipe materials.

### **UNIT 3: Water Treatment**

Objectives –Unit operations and processes – Principles, functions design and drawing of Chemical feeding, Flash mixers, flocculators, sedimentation tanks and sand filters – Disinfection- Residue Management – Construction and Operation & Maintenance aspects of Water Treatment Plants.

### **UNIT 4: Advanced Water Treatment**

Principles and functions of Aeration – Iron and manganese removal, Defluoridation and demineralization - Water softening – Desalination – Membrane Systems – Recent advances.

### **UNIT 5: Water Distribution and Supply to Buildings**

Requirements of water distribution -Components -Service reservoirs -Functions and drawings -Network design -Economics -Computer applications -Analysis of distribution networks -Appurtenances -operation and maintenance -Leak detection, Methods. Principles of design of water supply in buildings -House service connection -Fixtures and fittings -Systems of plumbing and drawings of types of plumbing.

### CHE18R408 Chemical Process in Pulp and Paper Technology

Т Credit L Р 3 3 0 0

### **Pre-requisite:** Nil

### **Course Type**: Theory

### **Course Objective(s):**

To increase awareness of the factors that drive industry trends and to review industry statistics about the major grades of paper and board.

### **Course Outcome(s):**

After completing this course, the student will be able to:

**CO1:** Apply basic concepts of pulp and paper technology to produce paper.

**CO2:** Apply reactions and unit operations steps to manufacture pulp.

**CO3:** Apply reactions and unit operations steps appropriately in manufacturing of paper.

**CO4:** Apply reactions and unit operations appropriately in manufacturing cellulose and various lignin chemicals.

CO5: Apply waste disposal techniques.

### Mapping of Course Outcome(s):

CO/PO		PO											
	1	2	3	4	5	6	7	8	9	10	11	12	
C01	L		Н	М									
CO2	L		Н	М	Μ								
CO3		Н	М			L							
CO4				Η									
CO5	М		L			Н							

### **UNIT 1 Basics of Pulp and Paper Technology**

Describe the consumption pattern of different types of paper, Describe cellulose raw material, Identify problems and scope inIndia.

### **UNIT2Pulp**

Explain various raw materials. Differentiate the various pulping processes; describe the Kraft pulping process with flow diagram. Compare various types of pulps, Explain chemical recovery process.

### **UNIT3Paper**

Differentiate the features f various raw materials used in paper manufacture, describe the Wet process for paper Manufacture with flow diagram Describe Fourdrinier machine, and describe the economics in paperindustry.

### **UNIT 4 Cellulose and Lignin Chemicals**

Describe the properties of cellulose, Prepare chemical cellulose, Describe the characteristics of Lignin chemicals, Select cellulose and ligninchemicals.

### **UNIT 5 WasteDisposalTechniques**

Analyze pollution potentials of Indian pulp and paper industry, Apply bio-technical approach for pollution, Apply Lignin waste treatment.

### **Text Book(s):**

	3	0	0	3					
Pre-requisite:Nil	Course Category	Course Category:Professional core							
		<b>Course Type</b> : Theory							

### **Course Objective(s):**

The objective of this course is to acquire fundamental knowledge of electrochemistry/electrochemical engineering including electrokinetic phenomena. The knowledge is applied to understand general methodologies for analysis and design of electrochemical systems.

### **Course Outcome(s):**

After completing this course, the student will be able to:

CO1: Understand basic laws of Electrochemical Processes.

CO2: Apply Mass transfer over Electrochemical Reaction.

CO3: Understand the Metallic Surface against corrosion

CO4: Understand about primary and secondary batteries

**CO5:** Apply metal finishing techniques

### Mapping of Course Outcome(s):

CO5			Н									

### **UNIT 1Introduction**

Introduction - Faraday's law, Nernst potential, galvanic cells, polarography - Electrical double layer, its role in electrochemical processes, electro capillary curve, Helmholtz layer, Guoy-Steven's layer, fields at the interface

### UNIT 2 Diffusion ControlledElectrochemicalReaction

Diffusion controlled electrochemical reaction, the importance of convection and the concept of limiting current - Mass transfer over potential or concentration polarization - Secondary current distribution - Rotating discelectrode

### **UNIT 3 Introduction of MetallicSurfacePreparation**

Metallic surface preparation - Phosphating - Inhibitors in acid media - Engine cooling systems – Control measures - Industrial boiler water corrosion control - Protective coatings- Vapor phase inhibitors - Cathodic protection- Sacrificial anodes - Paintremovers

### **UNIT 4 Primary and Secondary Batteries**

Primary And Secondary Batteries - Lechlanche dry cell, Alkaline manganese cell, mercury cell, air depolarised cell, sea, water cell, reserve electrolyte cells like Mg,CuCl2, Zn, PbO, Secondary cells like lead acid, Ni, Cd, Ni, Fe, AgO, Zn, AgO, Cd, Sodium, Sulphur, Li, S, Fuelcells

Pre-requisite:	Course Category	Profe	essiona	l core				
	<b>Course Type</b> : The							

### **Course Objective(s):**

This course fully examines the diverse regulatory, design and operational issues related to process plant safety and will develop the arsenal of proven tools and techniques for implementing safety and risk management in various segments of the CPI.

#### **Course Outcome(s):**

After completing this course, the student will be able to:

CO1: Understand the Indian and International Safety standards

CO2: Analyze the causes of accident and explain various engineering control methods

**CO3:** Understand the storage, handling and transportation of hazardous materials.

**CO4:** Understand the fire extinguishing agents and methods

**CO5:** Understand the risk assessment methods

### Mapping of Course Outcome(s):

### **UNIT 1 Introduction to Industrial SafetyandHazards**

#### 9 Hours

Describe importance of safety in Industry; classify the hazards, Explain Indian and International safety standards

#### 73

#### **UNIT 2 Chemical Hazards and Their Control**

Classify chemical hazards & their control, Explain occupational diseases and poisoning, Apply preventive measures of diseases, Describe safety aspects in plant layout, different color codes for chemical plants, Describe safety aspects in plant layout, Identify different color codes for chemical plants

#### **UNIT 3 Safe Handling of Hazardous Chemicals**

Discuss characteristics of hazardous chemicals, Handle hazardous chemicals for Storage, Handling & Transportation

#### **UNIT 4 Fire Hazards and Their Prevention**

Describe Fire hazards; List the causes of Fire hazards, Explain fire triangle, Describe Classes of fire, Describe fire extinguishers, and List types of extinguishers, Describe Construction and working of fire extinguishers, Describe Methods of their applications for fireextinguishers.

#### **UNIT 5 Hazard Identification and RiskAssessment**

Explain hazard identification methods, Hazard identification methods, List risk assessment methods, Explain risk assessmentmethods.

**OPEN ELECTIVES** 

CO-1: Know the fundamentals of fibre based optical devices

- CO-2: Understand the basic of integrated optical devices
- CO-3: Learn about the opto electronic devices306

CO-4: Understanding of nanostructured materials

CO-5: Understanding of quantum devices with applications

# Unit – I : Optical Fibre based Devices :

Fused single mode fibre directional coupler, Polished single mode fibre directional coupler ;Fibre polariser; Polarisation splitters based on fibre; Single mode fibre filter; Polarisation controller; Wavelength multiplexer and demultiplexer; Optical fibre switches and intensity modulators; Optical fibre phase modulator; Optical fibre frequency modulator; Optical fibre amplifiers

### **Unit – II : Integrated Optic based Devices :**

Optical directional coupler: directional coupler wavelength filter, polarisation splitting directional coupler; Polarisers : leaky mode polariser , metal clad polariser; Phase modulator; Optical switch; Acousto-optic devices : mode converter , tunable wavelength filter, Bragg type modulator , Bragg type deflector; Magnetooptic devices : TE-TM mode converter, modulators and switches, SiO2 / Si based thin film devices , Ti / LiNbO3 based optical devices, Proton exchange based optical devices .

### **Unit – III : Optoelectronic Devices**

Semiconductor Lasers: heterojunction and surface emitting lasers, quantum well lasers; Modulation of lasers; Photodetectors: PIN, MSM, Avalanche photodiodes; Optoelectronic modulation and switching devices; Electro-optic Devices; Optoelectronic Integrated circuits

### Unit – IV: Nanostructures

Nanocrystals: Electronic states, properties and fabrication; Nanomaterials – preparation methods - Chemical vapour deposition- Sol-gel methods - Optical properties of nanostructures; nano photodetector, nano transistor

### Unit – V :Quantum Devices

Low-dimensional structures: Quantum wells, Quantum wires, and Quantum dots; Density of states in lowdimensional structures; Resonant tunneling phenomena and applications in diodes and transistors; Applications of quantum devices: quantum well and quantum dot lasers, ultra-fast switching devices, high density memories, dc and rf squids, multi-state logic circuits, long wavelength detectors

# Course Objective(s):

Indian economy is dominated by agriculture sector. Synthetic fertilizers are must for producing good crops. Hence it is needed to provide comprehensive and balanced understanding of essential link between chemistry and the synthetic fertilizer industry. It is therefore vital for chemical engineers to understand for each fertilizer product, its flow diagram for Industryproduction.

# **Course Outcome(s):**

After completing this course, the student will be able to:

CO1: Understand the global outlook of fertilizer resources

CO2: Elaborate the production processes of nitrogenous fertilizers

**CO3:** Understand the about phosphate fertilizer production<sup>77</sup> **CO4:** 

Understand the production processes of NPK fertilizers

**CO5:** Understand about the mixed fertilizers

CHE1	3	0	0	3						
Pre-requisite:Nil Course Category: Program OpenElective										
	Course Type: The	eory								
Course Objective(s):										

To familiarize basics of Industrial safety principles; To know the various aspects of health hazards and Industrial accidents in Chemical Industries

#### **Course Outcome(s):**

At the end of the course, the students would be able to

CO1: Identify, Explain and Handle Different safety principles

CO2: Identify Different Hazards And their Fire protection agency's

CO3: Analyze various health hazards

**CO4:** Identify Safety aspects of reactive chemicals

CO5: Identify Hazards Safety in operations and processes

### Mapping of Course Outcome(s):

CO/PO				PO								
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	М		Η				L					
CO2			Н									
CO3			Н									
CO4			Н									
CO5			Н	L								

### Unit1:Introduction

#### 9hours

Introduction - Industrial safety principles, Site selection and plant layout, Legal Aspects, design for ventilation - Emergency response systems for hazardous goods basic rules and requirements which govern the chemical industries

control of fuzzieus Engineering control of plants instrumentation	colour codes for pipe lines bullety
aspects of reactivechemicals	
Unit 5: Operation and Process Hazards	9hours
Operation And Process Hazards Safety in operations and processes	- Runaway reactions - unstable
products	
Text book(s):

	3	0	0	3
Pre-requisite:Nil Course Categor	<b>y:</b> Prog	ram Op	enElect	ive
Course Type: T	heory			

#### **Course Objective(s):**

To understand the basic principles and calculations involved in combustion process; To know the different aspects of combustion appliances and processing techniques in detail.

#### **Course outcome(s):**

At the end of the course, the students would be able to

**CO1:** To analyze the fuel process

CO2: To apply the thermodynamic combustion systems

CO3: Ability to understand the furnace process inindustries

CO4: To understand the purpose of flame propagation

CO5: Ability to require the processing ofburner

#### Mapping of Course Outcome(s):

							PO					
СО/РО	1	2	3	4	5	6		8	9	10	11	12

# Unit 1: Basics of Pulp and Paper Technology

Describe the consumption pattern of different types of paper, Describe cellulose raw material, Identify problems and scope inIndia.

# Unit 2:Pulp

Explain various raw materials. Differentiate the various pulping processes; describe the Kraft pulping process with flow diagram. Compare various types of pulps, Explain chemical recovery process.

# **Unit 3:Paper**

Differentiate the features f various raw materials used in paper manufacture, describe the Wet process for paper Manufacture with flow diagram Describe Fourdrinier machine, and describe the economics in paperindustry.

# **Unit 4: Cellulose and Lignin Chemicals**

Describe the properties of cellulose, Prepare chemical cellulose, Describe the characteristics of Lignin chemicals, Select cellulose and ligninchemicals.

# **Unit 5 :WasteDisposalTechniques**

Analyze pollution potentials of Indian pulp and paper industry, Apply bio-technical approach for pollution, Apply Lignin waste treatment.

# **Text Books**

	industrial Enfluents	3	0	0	3
Pre-requisite: Nil	Course Category: Pro-	gram	Ope	nEle	ctive
	Co	urse	Туре	e: Th	eory

# **Course Objective(s):**

To acquire in depth knowledge of waste water treatment and characterization methods; To introduce the hazardous nature of effluent and water tr<sup>8</sup> e<sup>3</sup> atments methods followed in various industries.

#### 9Hours

9 Hours

# 9Hours

# Total hours: 45

# 9Hours

#### **Course Outcome(s):**

At the end of the course, students would be able to

**CO1:** Describe the nature and composition of industrial pollutants, their origin and their impact on the environment

**CO2:** Explain the principles of various processes available for wastewater treatment

CO3: Choose methods for waste minimization and water conservation

CO4: List the problems associated with the operation of industrial wastewater treatment facilities

and provide an explanation of the causes and possiblesolutions

CO5: Determine the toxicity levels of industrial effluents

### Mapping of Course Outcome(s):

CO/PO				PO								
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	М						L					
CO2			М									
CO3			Н	L								
CO4				M	Н							
CO5												

#### **Unit 1: Characterization ofwastewaters**

Quality of various industrial effluents; permissible limits; Fundamentals of wastewater treatment technologies; water treatmentequipments;

#### **Unit 2:Biologicaltreatment:**

Biological fluidised bed reactors for treatment of sewage and industrial effluents - anaerobic digestion and anaerobic contact process - denitrification - fluidised bed anaerobic reactors - anaerobic down flow stationary fixed film reactors.;

#### **Unit 3: Biological wastewatertreatment**

Completely mixed aerated lagoons, oxidation ditches and waste stabilisation ponds - activated sludge - microbial community in activated sludge - aerobic digestion, trickling filters - rotating biological contactors - nitrification

#### **Unit 4:Application Of Biological Treatment in Industries**

Waste water treatment and disposal of tannery-dye factory-sugar industry-pulp and paper industry -viscose industry - agro chemical industries- fertilizer industries - petro chemical industry and pharmaceutical industries.

#### **Unit 5: Treatment ofgaseouspollutants:**

Ambient air sampling, analysis methods and measuring devices; air pollution standards, air pollution control equipments; Case studies of gaseous effluent treatment in typical industries: steel plants, power plantsetc.

L 3 0 0

Т

P

С

3

#### **Pre-requisite:Nil**

#### Course Category: Program OpenElective Course Type: Theory

#### **Course Objective(s):**

To introduce the importance of coal and its processing method;

To understand the principle of coal refining and utilization process in detail.

#### **Course Outcomes:**

At the end of the course the students would be able to

CO1: To Understand the role& importance of Coal

**CO2**: Able to understand the production methods of coal & also the concepts of modeling

**CO3**: To provide the application of coal in power generation & various kinetics of solvent extraction.

**CO4**: To understand the different refining process

**CO5**: To Analyze the impacts of various process on Environment

#### **Mapping of Course Outcome(s):**

CO4	М	М	Н	Н								
CO5			М		М		L					

#### Unit 1: Role of coal

Role of coal in the overall energy situation; Recent advances in coal preparation methods including fine coal treatment;

### **Unit 2: Simulationandmodeling**

Simulation and modelling of coal beneficiation circuits; Thermodynamics and kinetics of coal gasification reactions;Fluidized bed coal gasification processes;

### **Unit 3:Powergeneration**

Combined cycle power generation; Coal liquefaction: Various methods, kinetics of solvent extraction, Catalytic hydrogenation and other liquefaction processes;

### **Unit4:Refining**

Absorptive and adsorptive purification, sulphuric acid purification, Concept of coal refinery and coal plex;

### **Unit 5:Environmentalimpact**

Analysis of coal utilization methods such as carbonization, gasification, etc.

3

#### Pre-requisite:Nil

Course Category: Program OpenElective Course Type: Theory

#### **Course objective(s):**

To gain basic knowledge on batteries ; introduce alternate sources for fuels and identify their applications in various fields

#### **Course outcome(s):**

At the end of the course, the students would be able to

**CO1**: Understand the importance of cell and batteries.

**CO2**: Explain the characteristics of electromagnetic reactions.

**CO3**: Explain the concept of batteries and their applications.

**CO4:** Evaluate the fundamental principles of fuel cells.

**CO5**: Describe industrial oriented application of fuel cells.

#### Mapping of Course Outcome(s):

#### **Unit1: Introduction**

#### 9Hours

9 Hours

9Hours

Concepts – Components of cells and batteries, Classification of cells and batteries, Operation of a cell, Specifications – Free energy, theoretical cell voltage, specific capacity, specific energy, energy density, memory effect, cycle life, shelf life, state of charge (SOC) and depth of discharge (DOD), internal resistance and coulombicefficiency.

#### **Unit2: Characteristics of electrochemical reaction**

Electrochemical principles and reactions – electrical double layer, discharge characteristics of cell and polarization, Electrode processes and Tafel polarization, thermodynamic background and Nernstequation.

### **Unit 3:Batteries**

Primary and secondary batteries – Zn/C, Zn/air, alkaline cells, lithium primary batteries, lead- acid, Ni/Cd, Ni/MH and Lithium secondary batteries (Components, Chemistry and Performance characteristics). Applications of storage batteries.

### **Unit4: Fuelcells**

Fuel cell fundamentals, The alkaline fuel cell, Acidic fuel cells, SOFC (components, chemistry and challenges) - Emerging areas in Fuel cells

### **Unit5: Applications offuelcells**

Fuel cell outlook, Applications of fuel cells – Industrial and commercial.

# To introduce basic concepts regarding drug engineering which serves as the backbone of medical and pharmaceutical industry

#### **Course outcome(s):**

С

CO1 : By knowing the basics of drugs and pharmaceutical technology

CO2: chemical conversion processes and their equipments.

CO3 : To understand basic unit operations

**CO4** : Understands the basic idea for design of processes and equipments used for drug manufacturing.

 ${\bf CO5}$  : To study various pharmaceutical products

### Mapping of Course Outcome(s):

CO /				PO								
РО	1	2	3	4	5	6	7	8	9	10	11	12
C01		Н			М							
CO2					М		L					
CO3	Н		L									
CO4					М				Н			
CO5		Н										

### **Unit1:Introduction**

Development of Drugs and Pharmaceutical Industry; Organic Therapeutic agents, Uses and Economics.

### Unit2: Drugs metabolismandpharmacokinetics

Drugs metabolism; Physio - Chemical principles; Radio Activity; Pharma Kinetics; Actions of drugs onhumanbodies.

### Unit 3: Important unit processes and their applications

Chemical conversion processes; Alkylation; Carboxylation; Condensation and Cyclisation; Dehydration;Esterification (Alcoholysis); Halogenation; Oxidation; Sulphonation;Complex chemical Conversion;Fermentation.

# Unit4: Pharmaceuticals, microbiological and animal products

Vitamins; Cold remedies; Laxatives; Analgesics; Non - steroidal contraceptives; External Antiseptics; Antacids and Others. Antibiotics; Biologicals; Harmones; Vitamines and Preservation Pharmaceutical Analysis. Analyticalmethods and test for  $v^8 a^7$ rious drugs and pharmaceuticals.

# 9Hours

# 9 Hours

9 Hours

#### **Unit 5:Manufacturingprinciples**

9Hours Compressed tables; Wet granulation; Dry granulation or Slugging; Direct compression; Tablet presses;Formulation; Coating; Pills; Capsules; Sustained action dosage forms; Parental solutions; Oral liquids; Injectibles; Ointments; Standard of hygiene and good manufacturing practice as per Drugs and CosmeticsAct as amended update, Packing; Packing techniques; Qualitycontrol

# **Text Book(s)**

1. Tyagi O.D, Yadav M, A -Text Book of Synthetic Drugs- Anmol Publications, New Delhi- $2011(3^{rd}edition).$ 

2. Chatwal G.R- Synthetic Drugs- Himalaya Publishing House, Delhi- 2009(3rdedition). **Reference(s)**

CHE18R412 Polymer Science And Technology	L	Т	Р	С
	3	0	0	3
Pre-requisite:Nil Cours	se Category: Pro	ogram (	DpenEl	ective

#### Course Type: Theory

# **Course outcome**

At the end of the course, students would be able to

CO1: Ability to identify the common commercial polymers by their names, properties and syntheses

CO2: Understand the properties and applications of polymers processing methodology

CO3: Apply the mechanisms of polymer degradation

CO4: Analyze the polymer additives and their role in the control of desired properties

CO5: Perform various polymer fabrication methods of extrusion, moulding and conversion of fibres to fabrics

CO5	Н			М								

### **Unit 1:Understanding Disasters**

Disaster and Development, and disaster management Chemical hazards: Classification of chemical hazards, Chemical as cause of occupational diseases – dust, fumes, gases and vapours; Hazard analysis and health management; Engineering control of chemical plant hazards – Plant layout, ventilation and lighting, Pressure vessels, Storage, Handling, Transportation, Electrical systems, Instrumentation; Emergency planning, Personal protective devices, Maintenance procedure

# **Unit 2:Control Of Disasters**

Geological Disasters (earthquakes, landslides, tsunami, mining); Hydro-Meteorological Disasters (floods, cyclon, lightning, thunder-storms, hail storms, avalanches, droughts, cold and heat waves) Biological Disasters (epidemics, pest attacks, forest fire); Technological Disasters (chemical, industrial, radiological, nuclear) and Man- made Disasters (building collapse, rural and urban fire, road and rail accidents, nuclear, radiological, chemicals and biological disasters) Global Disaster Trends – Emerging Risks of Disasters – Climate Change

#### 9Hours

#### and Urban Disasters

#### Unit 3:Disaster Management Cycle And Framework

Disaster Management Cycle – Paradigm Shift in Disaster Management Pre-Disaster – Risk Assessment and Analysis, Risk Mapping, zonation and Microzonation, Prevention and Mitigation of Disasters, Early Warning System; Preparedness, Capacity Development; Awareness During Disaster – Evacuation – Disaster Communication – Search and Rescue – Emergency Operation Centre – Incident Command System – Relief and Rehabilitation – Post-disaster – Damage and Needs Assessment, Restoration of Critical Infrastructure – Early Recovery – Reconstruction and Redevelopment; IDNDR,Yokohama Stretegy, Hyogo Framework of Action

#### Unit 4:Disaster Management In India

Disaster Profile of India – Mega Disasters of India and Lessons Learnt Disaster Management Act 2005 – Institutional and Financial Mechanism National Policy on Disaster Management, National Guidelines and Plans on Disaster Management; Role of Government (local, state and national),Non-Government and Inter-Governmental Agencies

#### Unit 5: Applications Of Science And Technology For Disaster Management

Geo-informatics in Disaster Management (RS, GIS, GPS and RS) Disaster Communication System (Early Warning and Its Dissemination) Land Use Planning and Development Regulations Disaster Safe Designs and Constructions Structural and Non Structural Mitigation of Disasters S&T Institutions for Disaster Management in India

#### 9Hours

# 9Hours

### **Unit 1: Introduction**

Physical phenomena governing differential Equation - Energy equation - Momentum Equation - Nature ofCoordinates, Discretization Methods

## **Unit 2: Parabolic Equations**

Parabolic Equations - Explicit, Implicit and Crank Nicholson Methods - Cartesian and Polar Co-ordinates - Mixed Boundary Condition – Jacobi - Gauss, siedel and SOR Methods

# **Unit 3: Heat Conduction and Convection**

Heat Conduction and Convection - **Control** volume approach - Steady and Unsteady One dimensional conduction - Two and three dimensional - Power law scheme – Simple algorithm

## Unit 4: General Applicability Of The Method

General applicability of the method - Approximate analytical solution - Raleigh's method -Galerkin Method, solution methods

# **Unit 5: Conduction and Diffusion Equations**

Isoparametric element formulations conduction and diffusion equations, heat transfer packages, Heat 2, HEATAX, RADIAT, ANSYS

# **Text Books**

1. Muralidhar, K., Sundararajan, T., Computational fluid flow and heat transfer, Narosa publishing

house, New Delhi, 2<sup>nd</sup> edition, 2003

### **Course outcomes**

At the end of the course, the students would be able to

CO1: Apply equations of fluid flow and heat transfer for turbulence models

CO2: Apply finite difference, finite volume and finite element methods to fluid flow problems

CO3: Apply finite volume to solve fluid flow problems

CO4: Analyze issues surrounding two-phase flow modeling

CO5: Analyze grid generation

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	М		Н		L							
CO2			Н									
CO3		М		L			92					
CO4			Н									М
CO5					L	М						

# Unit 1: Conservation Laws and Turbulence Models

Governing equations of fluid flow and heat transfer –mass conservation, momentum and energy equation, differential and integral forms, conservation and non-conservation form. Characteristics of turbulent flows, time averaged Navier Strokes equations, turbulence models-one and two equation, Reynolds stress, LES and DNS

### **Unit2: FiniteDiffernce Approximation**

Mathematical behavior of PDE, finite difference operators, basic aspects of discretization by FDM, explicit and implicit methods, error and stability analysis

# Unit 3: FiniteVolumeMethod

Diffusion problems – explicit and implicit time integration; Convection-diffusion problems – properties of discretisation schemes, central, upwind, hybrid, QUICK schemes; Solution of discredited equations.

# **Unit 4: FlowField Computation**

Pressure velocity coupling, staggered grid, and SIMPLE algorithm, PISO algorithm for steady and unsteady flows

# **Unit 5: Grid Generation**

Physical aspects, simple and multiple connected regions, grid generation by PDE solution, grid generation by algebraic mapping.

# 9Hours

9Hours

# 9Hours

# Unit 1: Fundamentals of Fluidization

Introduction and applications, Introduction to fluidized bed systems - Fundamentals of fluidization - Industrial applications of fluidized beds, Physical operations - Synthesis reaction, cracking and reforming of hydrocarbons, gasification, carbonization, gas-solid reactions, calcining and clinkering

#### Unit 2:Design Of Fluidized Bed

Gross behavior of fluidized bed - Minimum and terminal velocities in fluidized beds -Types of fluidization -Design of distributors - Voidage in fluidized beds - TDH - Variation in size distribution with height, viscosity and fluidity of fluidized beds - Power consumption

#### Unit 3: Analysis Of Bubble And Emulsion Phase

Analysis of bubble and emulsion phase - Davidson's model, frequency measurements, bubbles in ordinary bubbling bed model for bubble phase and emulsion phase - Experimental findings - Turn over rate of solids- Bubbling bed model for emulsion phase - Interchange coefficient

### **Unit 4:Flow Pattern In Fluidized Beds**

Flow Pattern Of Gas, Heat and Mass Transfer In Fluidized Beds - Flow pattern of gas through fluidized beds - Experimental findings - The bubbling bed model for Gas inter change Interpretation of Gas mixing data -Heat and Mass Transfer between fluid and solid Experiment findings on Heat and Mass Transfer - Heat and Mass Transfer rates from bubbling bed model

#### **Unit 5:Heat Transfer In Fluidized Beds**

Heat transfer between fluidized beds and surface - Experiment finding theories of bed heat transfer comparison of theories - Entrainment above TDH - Model for entrainment and application of the entrainment model to elutriation

# **Course Objective(s):**

This course develops students understanding of how organizations match the requirements of consumers in competitive environments, and develop strategies to create the competitive edge. It covers areas such as analysis, planning, implementation, and control, as well as the marketing mix, exportation, and the social aspects of marketing.

#### **Course Outcome(s):**

The students will be able to:

CO1: To Develop understanding of marketing concepts, philosophies and historical background

**CO2:** To Develop understanding of marketing operations and complexities for students to apply in practical business situations.

**CO3:** To Understand concepts related to Segmentation, Targeting and Positioning, product attributes, and pricing strategies prevalent in domestic and international scenario.

**CO4:** To Study various tools and techniques of promoting the products in ethical manner.

CO5: To Understand emerging concepts of marketing in the emerging global markets

		3	0	0	3
Pre-requisite: Nil	Course Ca	ategory	r: Hum	anities	s Elective
		(	Course	Туре	: Theory

### **Course Objective(s):**

This course aims to clarify the principles and basic concepts of organizational psychology. Including organizations and understanding its business design based on efficiency and quality of employee life. It also aims at enhancing the quality of life of employees. When organization's aspects are gauged in terms of psychological assessment, personnel decisions in line with training and development, organizational change and organizational health in specific the intrinsic problems are understood paving way towards standards that are high.

### **Course Outcome(s):**

The students will be able to

**CO1:** To learn basic concepts of industrial and organizational psychology

**CO2:** To illustrate different ways of achieving organizational effectiveness through individual behaviour **CO3:** To learn the concepts relating to individual behavior to achieve group target and achieve leadership position in organization

**CO4**: To understand the organizational changes and means to evaluate based on nature of organizations **CO5:** To learn implications of changes aligning the interest of individual, group and organization as a whole.

HSS18R004 Project	L	Т	Р	Credit					
		3	0	0	3				
Pre-requisite: Nil	<b>Course Category:</b>	Course Category: Humanities Elective							
	<b>Course Type</b> : Theory								

#### **Course Objective (s):**

This course describes concepts relating to project management and enable students to evolve project objectives appropriately with relevance to business proposals. It covers the required dimensions relating to evaluation of project by testing the technical feasibility, financial viability, market acceptability and social desirability of projects. It gives an account on risk and profitability analysis that facilitates the making of the effective project proposal and guides learners in project planning, implementation and control. It also emancipates the scope of project management in undertaking foreign collaboration projects.

#### **Course Outcome**(s):

The students will be able to:

CO1: Familiarizes the concept of project and steps in project management.

**CO2:** Understand the basics stages involved in preparing business proposals.

**CO3:** Evaluate the technical feasibility, financial viability, market acceptability and social desirability of projects.

**CO4:** Enabled to analyse the Risk and profitability of the project proposals

CO5: Act effectively as project managers and as part of project teams

HSS18R006 Engineering Economics		L	Т	P	Credit		
		3	0	0	3		
Pre-requisite: Nil	Course Category: Humanities Elective						
	Course T	vpe	: Theo	orv			

#### **Course Objective(s):**

This course provides an introduction to a broad range of economic concepts, theories and analytical techniques. It considers both microeconomics - the analysis of choices made by individual decision making units (households and firms) - and macroeconomics - the analysis of the economy as a whole. Demand and market structure will be analysed at the firm level. Macroeconomic issues regarding National Income, Inflation, labour and money at an aggregate level will be modelled. The role of government policy to address microeconomic market failures and macroeconomic objectives will be examined.

#### **Course Outcome(s):**

After completing this course, the student will be able to:

**CO1:**Identify and learn economic concepts into market economies.

**CO2:**Understand the pricing methods, interpret the market factors to determine the price for products or services and to making decisions based on demand factors.

**CO3:**Understand the major characteristics of different market structures and the implications for the behavior of the firm.

**CO4:**Measure living standards, inflation, and unemployment for use as economic indicators. Understand the role of International Trade.

**CO5:**Analyze the determinants of the relative strengths of monetary policy for sustainable growth of our nation and International Trade.

### **Course objective(s):**

This course in meant to exhibit the concepts on costing by describing its elements, types and cost sheet preparation. It also encompasses the analytical framework that can be applied in cost analysis like Marginal costing, CVP analysis, Break even analysis, etc enabling the students to make decisions on cost parameters. Students are enabled to apply techniques like standard costing, activity based costing, etc to manage and control cost effectively.

# **Course Outcome(s):**

After completing this course, the student will be able to:

**CO1:** Understand the basics of costing and preparation of cost sheet.

- **CO2:**Analyse the cost by applying tools like Marginal costing, CVP analysis and other applications.
- CO3: Prepare budgets for controlling cost in manufacturing or production centres.
- **CO4:** Define cost standards and critically examine the application of Standard costing in a production centre.
- **CO5:** Understand the application of various strategic cost alternatives including activity based costing.

- 1. To understand the basic characteristics of design of product and its evolution.
- 2. To be aware of the various approaches related to new product development process.
- 3. The student will learn about the need for industrial design and its impact on the market.
- 4. To gain insights about Failure Mode Effective Analysis.

5. To understand the methodologies and tools related to design of new product and the concepts associated to Value engineering.

#### **Course Outcome(s):**

After completing this course, the student will be able to:

**CO1:** Learn basic conscepts related to design and development of new product.

**CO2:**Understand the structured approach towards incorporating quality, safety and reliability into design.

**CO3:** Learn the concepts relating to simulating product performance and manufacturing processes.

**CO4:** Understand the technologies related to computer aided group technology.

CO5: Learn implications of changes related to economic analysis.

#### **UNIT 1: New Product Idea**

Definition – Design by Evolution and by Innovation - factors to be considered for product design – Production-Consumption cycle – The morphology of design – Primary design Phases and flowcharting. Role of Allowance, Process Capability, and Tolerance in Detailed Design and Assembly Product strategies, Market research – identifying customer needs – Analysis of product – locating ideas for new products, Selecting the right product, creative thinking, curiosity, imagination and brain storming - product specification.

#### **UNIT 2: New Product Designing**

Task - Structured approaches – clarification – search – external and internal – systematic exploration – conception, selection - methodology benefits. The value of appearance - principles and laws of appearance – incorporating quality, safety, and reliability into design. Man-machine considerations – Designing for ease of maintenance.

#### **UNIT 3: Role Of Technology In Designing**

Integrating CAE, CAD, CAM tools – Simulating product performance and manufacturing process – Needs for industrial design-impact – Industrial design process – Technology driven products - user driven products – assessing the quality of the product.

#### **UNIT 4: Methods And Principles Of Designing**

Methodologies and tools - Design axioms - Design for assembly and evaluation - Minimum part assessment - Taguchi Method - Robustness assessment - Manufacturing process rules - Designer's tool kit - Computer aided group process rules - Designer's tool kit - Computer aided group technology - Failure Mode Effective Analysis – Design for minimum number of parts – Development of modular design – Minimising part variations – Design of parts to be multifunctional, multi-use, ease of fabrication – Poka Yoka principles.

#### **UNIT 5: Feasibility Analysis**

Estimation of manufacturing cost – cost procedures – Value Engineering - reducing the component cost and assembly cost – minimizing the system complexity – Basics and Principals of prototyping – Economic Analysis: Break even analysis. Classes of exclusive rights – Patents – Combination versus aggregation – Novelty and Utility – Design patents – Paten disclosure – Patent application steps - Patent Office prosecution - Sales of paten rights - Trade marks – Copyrights.

Pre-requisite: Nil	Course Category: Humanities Elective						
	<b>Course Type</b>	e : Th	eory				

#### **Course Objective(s):**

This course aims to clarify the principles and basic concepts of Business Process Engineering. This course focuses on both quantitative and qualitative analytical skills and models essential to operations process design, management, and improvement in both service and manufacturing oriented companies. The main objective of the course is to prepare the student to play a significant role in the management of a world class company which serves satisfied customers through empowered employees, leading to increased revenues and decreased costs.

#### **Course Outcome(s):**

The students will be able to

CO1: Learn the basic concepts related to Business Process Reengineering

CO2: Understand the methodologies and tools used for Business Process Reengineering

- **CO3:** Learn the concepts relating to benefit/cost analysis and its impact on the business organizations.
- **CO4:** Understand the need for assessment of business re-engineering and the factors contributing to its success.

**CO5:** Learn the best practices used in Business Process Reengineering with illustrations from corporate world

#### **UNIT 1: Basic Concepts**

11

#### 9 Hours

Introduction to BPR Definition; the paradigm shifts in production; the positioning concept; the reengineering visions; the benefits of business re-engineering.

#### **UNIT 2: Methodologies For BPR**

Methodologies and Tools for BPR, Process management; dynamic business re-engineering change framework; steps to reengineer the process.

9 Hours

9 Hours

9 Hours

9 Hours

Total: 45 Hours

#### **UNIT 3: Modelling the Business**

Tools used in Modelling the Business: flow-charting, business activity maps, relational diagrams, benefit/cost analysis. The enabling role of information technology in business re-engineering.

### **UNIT 4: Change Management**

Change Management, Planned changes in business re-engineering projects; challenges of business change; business change development. Success factors in re-engineering. The assessment of business reengineering.

#### **UNIT 5: Best Practices in BPR**

Best Practices in BPR, Case studies: Bell Atlantic, Nissan, Chrysler, Xerox, and Hewlett Packard etc.

HSS18R012 Political Economy	L	Т	Р	С					
		3	0	0	3				
Pre-requisite: Nil Course Category: Humanities									
	Course Type	e : Th	eory						

#### **Course Objective(s):**

This course provides an introduction to the political economy of India. It examines the interplay of politics and economics. Some of the key themes to be explored are globalization, economic reform, poverty, redistribution, federalism, political protest, public goods delivery, gender, and ethnic politics. Although this class focuses specifically on India, a number of the themes discussed in this course are functions of institutions, rights, Party Systems and challenges.

#### **Course Outcome(s):**

The students will be able to

**CO1:** Explain the key concepts of political economy analyse the significant developments in the political ideologies.

**CO2:** Describe the salient features of the constitution of India and its functions and also interpret, integrate and critically analyse the fundamental rights duties and responsibilities.

CO3: Understand the Political party system their evolution and role in the economy

CO4: Understand the various ideological of Indian Political Thoughts

CO5: Have a deep understanding and appreciation  $\delta \mathbf{f}$  India undergoing major economic and social transformation

#### **UNIT 1: Introduction to political Economy**

Political Economy as a Method, perspectives, Politics as Reproduction of Social Relations, State and Social Opportunity, Politics of Rent Seeking -Evolution of State in India: Historical Roots of planning, Redistribution.

#### **UNIT 2: Indian Constitution**

The Pre-ample- Fundamental rights and duties, Directive Principles- Offices of the President, Prime Minister, Cabinet Government, Chief Election Commissioner, and Governor – Parliamentary system and Procedures - The Judiciary system.

#### **UNIT 3: Party System**

National and regional political parties, ideological and social bases of parties; patterns of coalition politics; Pressure groups, trends in electoral behaviour; changing socio- economic profile of Legislators.

#### **UNIT 4: Indian Political Thought**

Political Ideologies: Liberalism, Socialism, Marxism, Fascism, Gandhism and Feminism - Dharamshastra, Arthashastra and Buddhist traditions; Sir Syed Ahmed Khan, Sri Aurobindo, M.K. Gandhi, B.R. Ambedkar, M.N. Roy.

#### **UNIT 5: Challenges to Indian Democracy**

Uneven Development of Regions in India – Communalism – Regionalism – Violence – Corruption – environmental degradation- illiteracy - Population.

HSS18R013 Professional Ethics		L	Т	Р	С
		3	0	0	3
Pre-requisite: Nil	Course Cate	gorv: H	Iumani	ties El	ective

**Course Type** : Theory

#### **Course Objective(s):**

It is essential for professionals in any field to have an understanding of the ethical problems and principles in their field. The general principles of professional ethics will be examined, as well as the distinctive problems. This course is presented in three parts: theory; case studies; and research and presentation. Theory includes ethics and philosophy of engineering. Historical cases are taken primarily from the scholarly literatures on engineering ethics, and hypothetical cases are written by students. It will allow students to explore the relationship between ethics and engineering and apply classical moral theory and decision making to engineering issues encountered in academic and professional careers.

#### **Course Outcome(s):**

The students will be able to

**CO1:** Identify the multiple ethical interests at stake in a real-world situation or practice

**CO2:** Assess their own ethical values and the social context of problems

**CO3:** Develop critical thinking skills and professional judgement and understand practical difficulties of bringing about change

CO4: Demonstrate knowledge of ethical values in non-classroom activities, such as service learning, internships, and field work

CO5: Manage differing opinions on complex ethical scenarios. It's important for those confronted with ethical challenges to be able to hold multiple conflicting points of view, without necessarily adhering to any of them

#### Mapping of Course Outcome(s):

<b>UNIT 1: 1</b>	Enginee	ring Eth	nics							9	Hours	

#### **UNIT 1: Engineering Ethics**

Functions of Being a Manager - Stock holder and stakeholder management - Ethical treatment of employees ethical treatment of customers- supply chain management and other issues.

#### **UNIT 2: Engineering as Social Experimentation**

Senses of Ethics - Variety of moral issues - Types of inquiry - Moral dilemmas - Moral Autonomy -Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Professions and Professionalism – Professional ideals and virtues – Theories about right action – Self-interest – Customs and religion – Use of Ethical Theories.

#### **UNIT 3: Engineer Responsibility for Safety**

Corporate social responsibility - Collegiality and loyalty - Respect for Authority - Collective Bargaining -Confidentiality - Conflicts of Interest - Occupational Crime - Professional Rights - Employee Rights -Discrimination.

#### **UNIT 4: Responsibility and Rights**

Moral imagination, stake holder theory and systems thinking - One approach to management Decision making Leadership.

#### 9 Hours

9 Hours

#### **UNIT 5: Global Issues**

#### 9 Hours

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership – Sample code of conduct.

HSS18R014 Operations Research		L	Т	Р	С				
		3	0	0	3				
Pre-requisite: Nil Course Category: Humanities Electiv									
<b>Course Type</b> : Theory									

#### Course Objective(s):

This subject will provide students with ability to understand and analyze managerial problems in industry so that they are able to use resources (capitals, materials, staffing, and machines) more effectively. It also provides the knowledge of formulating mathematical models for quantitative analysis of managerial problems in industry. It enhances the skills in the use of Operations Research approaches and computer tools in solving real problems in industry.

#### **Course Outcome(s):**

The students will be able to

**CO1:** Identify and develop operational research models from the verbal description of the real System.

CO2: Able to build and solve Transportation Models and Assignment Models

CO3: Use mathematical software to solve the proposed models.

**CO4:** Develop a report that describes the model and the solving technique, analyse the results and propose recommendations in language understandable to the decision making processes in Management Engineering. **CO5:** Be able to design new simple models, like: CPM, MSPT to improve decision –making and develop critical thinking and objective analysis of decision problems.

Introduction to applications of operations research in functional areas of management - Linear

Programming - formulation, solution by graphical and simplex methods (Primal - Penalty, Two Phase),

9 Hours

#### **Course Objective(s):**

**UNIT 1: Introduction to Linear Programming** 

This subject provides students with the knowledge to understand the philosophy and core values of Total Quality Management (TQM). It helps to determine the voice of the customer and the impact of quality on economic performance and long-term business success of an organization; apply and evaluate best practices for the attainment of total quality. Students who complete this course will be able to critically appraise management techniques, choose appropriate statistical techniques for improving processes and write reports to management describing processes and recommending ways to improve them.

#### **Course Outcome(s):**

The students will be able to

11

**Course Type** : Theory

**CO1:** Understand the role and nature of quality in evolving international economic conditions **CO2:** Apply the Principles of Quality Management for real time problems

**CO3:** Understand the quality encounter process, including supporting facilities and customer requirements/characteristics

**CO4:** Classify quality measurement methods and continuous improvement process

**CO5:** Frame Management strategy methods, including identification, development, implementation and feedback processes

#### Mapping of Course Outcome(s):

СО							PO					
/ PO	1	2	3	4	5	6	7	8	9	10	11	12
C01	L	Н			Μ							
CO2			М			L						
CO3	Η	М		L								
CO4	М			Н								
CO5		Н		М								

#### **UNIT 1: Introduction to Quality Management**

Definitions – TOM framework, benefits, awareness and obstacles - Quality – vision, mission and policy statements - Customer Focus - customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality. Cost of quality.

#### **UNIT 2: Principles and Philosophies of Quality Management**

Overview of the contributions of Deming, Juran Crosby, Masaaki Imai, Feigenbaum, Ishikawa, Taguchi, Shingeo and Walter Shewhart - Concepts of Quality circle, Japanese 5S principles and 8D methodology.

#### **UNIT 3: Statistical Process Control and Process Capability**

Meaning and significance of statistical process control (SPC) – construction of control charts for variables and attributed - Process capability – meaning, significance and measurement – Six sigma concepts of process capability - Reliability concepts - definitions, reliability in series and parallel, product life characteristics curve - Business process re-engineering (BPR) - principles, applications, reengineering process, benefits and limitations.

#### **UNIT 4: Tools and Techniques for Quality Management**

Quality functions development (QFD) - Benefits, Voice of customer, information organization, House of quality (HOQ), building a HOQ, QFD process. Failure mode effect analysis (FMEA) – requirements of reliability, failure rate, FMEA stages, design, process and documentation.

#### **UNIT 5: Taguchi Techniques**

Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio - Seven old (statistical) tools - Seven new management tools - Bench marking and POKA YOKE.

#### **Text Book(s):**

CHEX004 Chemical Engineering aspects in Nuclear Industries	-	L 3	T 0	P 0	C 3			
Pre-requisite: Nil	Cou	Course Category:One Credit						

#### UNIT 1.

Introduction to Nuclear Engineering: Radio activity, Units of nuclear radiation,

Mass energy equivalence, binding energy, Type of nuclear reactions, Fission, Fusion, Initiation,

Chain reaction, moderation,

Fertile, Fissile materials, Breeding. Applications: Power, medical diagnosis and treatment, food processing, industrial applications, scientific research (3 class)

#### UNIT 2.

Materials: Components of nuclear reactors, Fuels, coolants, moderator, reflectors, structural materials,

isotope separation (2 class)

#### UNIT 3.

Type of Nuclear Reactors: Thermal, Fast Breeder Reactor, Advanced Heavy Water Reactor, India

3 Stage Nuclear Power Programme (2 class)

#### UNIT 4.

Nuclear fuel cycles and unit operations: Front end (nuclear fuel production) and back end

(spent fuel reprocessing), liquid liquid extraction (LLE), basics, single stage system, multi stage system,

cross current, counter current flows, types of extractors, PUREX process of spent fuel reprocessing,

heat transport system in nuclear reactors, separation of radionuclides by Ion Exchange process ( 6 class)

#### UNIT 5.

Safety: Nuclear Waste and disposal, effect of nuclear radiation, personnel monitoring, radiation

protection, radiation dose (2 class)
