B.TECH INFORMATION TECHNOLOGY

CURRICULUM AND SYLLABUS (CBCS)

(For the Students Admitted from the Academic Year 2018-19 Onwards)

KALASALINGAM UNIVERSITY

VISION

To be a Center of Excellence of International Repute in Education and Research

MISSION

To Produce Technically Competent, Socially Committed Technocrats and Administrators through Quality Education and Research

DEPARTMENT OF INFORMATION TECHNOLOGY

VISION

To become a centre of excellence in the field of Information Technology through quality education and research

MISSION

To provide high quality technical education through effective curriculum and innovative teaching to meet industry need.
To inculcate ethically and socially committed information technology professionals by value added courses.
To provide state-of-the-art learning facilities for students and faculties to investigate, apply and transfer knowledge.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- **PEO-1:** The graduates are trained to gain employment as an IT professional and to pursue higher studies to cater the global needs.
- **PEO-2:** The graduates could comprehend, analyze, design and create novel products and technologies that provide solution to real world problems.
- **PEO-3:** The graduates acquire multidisciplinary knowledge with ethical standards, effective communication skills and management skills to work as part of teams on all diverse professional environments.

PROGRAMME OUTCOMES (POs)

- **PO-1:** Apply knowledge of mathematics, science, engineering fundamentals and specialization in Information Technology for computational problem solving.
- **PO-2:** Identify, formulate, analyze and derive complex problems in the field of computer and communication.
- **PO-3:** Design/develop computing systems to meet the industry and society needs with due consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO-4:** Investigate the complex problems by research methods including design of experiments, analysis and interpretation of data to provide valid conclusions.
- **PO-5:** Select and apply necessary modern engineering and IT tools to solve complex computing and communication problems.
- **PO-6:** Apply reasoning acquired through contextual knowledge to assess the societal, legal, security and cultural issues relevant to the professional engineering practice.
- **PO-7:** Demonstrate the knowledge of contemporary issues for sustainable development in the field of IT.
- **PO-8:** Commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO-9:** Work effectively as an individual and also a member/leader in multidisciplinary teams.
- **PO-10:** Effectively communicate with engineering community and society about their field of expertise to write reports, design documentation and make presentations.
- **PO-11:** Demonstrate and apply the knowledge of information technology and management principles to manage projects in multidisciplinary environments.
- **PO-12:** Recognize the technology changes completely and enrich the knowledge by life-long learning.

| Key Components in Department Mission | PEO1 | PEO2 | PEO3 |
|--|--------------|------|--------------|
| Quality Education | \checkmark | ✓ | √ |
| Research | \checkmark | ✓ | - |
| Social Commitment, Ethical Practices | - | ~ | ✓ |
| Innovative Skills | \checkmark | ✓ | \checkmark |
| Communication Skills (Meet Industrial and Social expectations) | ✓ | ~ | ✓ |

 Table 1: PEOs consistency with Mission of the Department

Table 2: POs consistency with PEOs

| PEO/PO | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|--------|------------|--------------|--------------|--------------|--------------|--------------|--------------|------------|------------|------|--------------|--------------|
| PEO1 | ✓ | \checkmark | \checkmark | \checkmark | \checkmark | \checkmark | - | - | ✓ | ~ | \checkmark | \checkmark |
| PEO2 | ✓ | \checkmark | ✓ | ~ | \checkmark | \checkmark | \checkmark | - | ✓ | - | \checkmark | - |
| PEO3 | ✓ | \checkmark | ✓ | - | - | \checkmark | \checkmark | ✓ | ✓ | ~ | \checkmark | \checkmark |

Table 3: Curriculum Contribution towards attainment of PEOs

| Course Component | Number of Credits | PEOs |
|-------------------------------|-------------------|------------------|
| Basic Science and Mathematics | 25 | PEO1 |
| Humanities and Social Science | 3 | PEO3 |
| Soft Skills | 3 | PEO3 |
| Basic Engineering | 24 | PEO1 |

Course Topic(s)

UNIT 1: Basic Concepts and Electronic materials

Free electron theory, Density of states and energy band diagrams, Kronig-Penny model (to introduce origin of band gap), Energy bands in solids, E-k diagram, Direct and indirect bandgaps, Types of electronic materials: metals, semiconductors, and insulators, Density of energy states, Occupation probability, Fermi level, Effective mass, Phonons.

UNIT 2: Semiconductors

Intrinsic and extrinsic semiconductors, Dependence of Fermi level on carrier-concentration and temperature (equilibrium carrier statistics), Carrier generation and recombination, Carrier transport: diffusion and drift, p-n junction, Metal-semiconductor junction (Ohmic and Schottky), Semiconductor materials of interest for optoelectronic devices.

UNIT 3: Light-semiconductor interaction

Optical transitions in bulk semiconductors: absorption, spontaneous emission, and stimulated

emission; Joint density of states, Density of states for photons, Transition rates (Fermi's golden rule), Optical loss and gain; Photovoltaic effect, Exciton, Drude model.

UNIT 4: Engineered semiconducting materials

Density of states in 2D, 1D and 0D (qualitatively), Practical examples of low-dimensional systems such as quantum wells, wires, and dots: design, fabrication (lithiography,CVD), and characterization techniques(XRD, TEM).

Unit 5: Measurements : Conducting and Semiconducting Materials

Four-point probe and van der Pauw measurements for carrier density, resistivity, and hall mobility; Hot-point probe measurement, capacitance-voltage measurements, parameter extraction from diode I-V characteristics, band gap by UV-Vis spectroscopy .

List of Experiments

- 1. Diode V-I characteristics
- 2. Transistor Static characteristics C.E. mode
- 3. Transistor characteristics C.B. mode
- 4. Logic Gates AND, OR, NOT truth table verification discrete components
- 5. Zener diode characteristics & Break down Voltage
- 6. Zener regulated power supply.
- 7. Hall co-efficient of a semiconductor sample
- 8. Resistivity of a semiconductor crystal with temperature by four probe method and to determine band gap.
- 9. Determination of band gap of a semiconductor using P.O box.

Text Book(s):

- 1. J. Singh, Semiconductor Optoelectronics: Physics and Technology, McGraw-Hill Inc. (1995).
- 2. B. E. A. Saleh and M. C. Teich, Fundamentals of Photonics, John Wiley & Sons, Inc., (2007).
- 3. S. M. Sze, Semiconductor Devices: Physics and Technology, Wiley (2008).

Unit 1: Atomic and Molecular Structure

Schrodinger wave equation: Derivation of time independent Schrodinger wave equation, Representation of Schrodinger wave equation in polar coordinates - Radial distribution function graphs of s, p, d and f orbitals. Molecular Orbital Theory: MOT concept, MO diagrams of homonuclear diatomic molecules (hydrogen, nitrogen and oxygen) and hetero-nuclear diatomic molecules (carbon monoxide and nitric oxide). Crystal field theory: CFT concept, weak and strong ligands, energy level diagrams of transition metal ions ($Fe^{2+}\& Fe^{3+}$) in octahedral and tetrahedral complexes and their magnetic properties. Intermolecular forces - Ionic, dipolar and van der Waals interactions.

Unit-2: Periodic Properties

Effective nuclear charge - Factors affecting effective nuclear charge: Penetration or shielding of orbitals - Variation of s, p, d and f orbital energies of atoms in the periodic table - Aufbau principle (Building-up principle): Application of Aufbau principle in writing electronic configuration, Deviation from Aufbau principle - Periodicity of properties in a periodic table - Periodic properties: Atomic and ionic sizes, ionization energies, electron affinity and electronegativity - Variation of periodic properties in the periodic table - Hard soft acids and bases: Concept and examples.

Unit-3: Free Energy and Chemical Equilibria

Thermodynamic functions: Definition and mathematical expression for Work, Energy, Enthalpy, Entropy and Free energy - Nernst equation: Derivation, apply Nernst equation to determine of

solubility product, pH (glass electrode). Potentiometric titrations: Acid-Base, Redox and precipitation reaction - Water analysis: Hardness by EDTA method and chloride ion by Argentomentric method - Corrosion: Definition, types (dry & wet) and mechanism. and control of Dry and Wet corrosion.

Unit4: Organic Reactions

Nucleophilic substitution reactions: Definition, types and examples of nucleophile, Compare nucleophilicity and basicity of a nuceophile - Types of nucleophilic substitution (case RX and ArX): Mechanism of S_N1 , S_N2 , S_Ni and Benzyne. Electrophilic substitution reactions: Definition, types and examples of electrophile - Electrophilic substitution reactions of hydrocarbons: Halogenation, sulphonation, nitration. Friedel crafts alkylation and acylation reaction. Nucleophilic addition reactions (case aldehydes and ketones): Polarity of C=O bond. General mechanism of nucleophilic addition reactions on aldehydes and ketones: HCN, HOH, ROH and NaHSO₃ addition. Electrophilic addition reactions (case alkenes): General mechanism of electrophilic addition reactions on alkene - Addition of HBr [Markownikoff & Anti-Markownikoff (peroxide effect)] - Addition of alkene (polymerization of ethylene). Elimination reactions: Types of elimination reactions (case alkyl halides): Dehydrohalogenation of alkyl halides - E_1 and E_2 mechanism - Dehydration of alcohols to alkene and ethers. Greener synthesis of drug molecules (Aspirin and Ibuprofen)

Unit 5: Stereochemistry & Spectroscopic Techniques

Stereochemistry - Definition with examples: Geometrical isomers (alkene) and stereoisomers, symmetry, chirality, enantiomers, diastereomers, meso and racemic mixture. Representation of 3D structures: Wedge formula, Fischer projections, Newmann and Sawhorse formula (upto 2 carbons) - Conformational analysis: Ethane, butane and cyclohexane - Configurational analysis: Rules of RS nomenclature and application of RS nomenclature to molecules containing one chiral centre. Electronic spectroscopy: Principle, instrumentation, selection rules and medicinal application of fluorescence spectroscopy. Nuclear magnetic resonance spectroscopy (1 H-NMR): Principle, instrumentation, chemical shift, coupling constant and application (structural identification of the compound C₃H₆O from 1 H-NMR data). X-ray diffraction: Principle, instrumentation and applications X-ray diffraction.

List of Experiments (Any 10):

- 1. Determination of Viscosity by Ostwald Viscometer.
- 2. Determination of surface tension by stalagmometer.
- 3. Adsorption of acetic acid by charcoal.
- 4. Determination of chloride content of water.
- 5. Estimation of hardness of water by EDTA method.
- 6. Determination of the rate constant of a reaction
- 7. Thin layer chromatography.
- 8. Determination of the partition coefficient of a substance between two immiscible liquids
- 9. Determination of Saponification /acid value of oil.
- 10. Preparation of Aspirin
- 11. Potentiometric titration of strong acid vs strong base.
- 12. Potentiometric titration of weak acid vs strong base.
- 13. Determination of cell constant and conductance of solutions.

Unit 1: Calculus:

Rolle's Theorem- Mean value theorems - Taylor's and Maclaurin theorems with remainders - indeterminate forms and L'Hospital's rule - Maxima and minima.

Unit 2: Multivariable Calculus (Differentiation):

Limit, continuity and partial derivatives - directional derivatives - total derivative - Maxima, minima and saddle points - Method of Lagrange multipliers.

Unit 3: Calculus (Applications):

Curvature (Cartesian coordinates) - Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

Unit 4: Sequences and series:

Convergence of sequence and series, tests for convergence; Power series, Taylor's series, series for exponential, trigonometric and logarithm functions;

Unit 5: Matrices:

System of linear equations; Symmetric, skew-symmetric and orthogonal matrices; Determinants; Eigenvalues and eigenvectors; Cayley-Hamilton Theorem - Diagonalization of matrices - Orthogonal transformation- Reduction of Quadratic form to Canonical form.

Unit 1: Multivariable Calculus (Integration):

Multiple Integration: Double integrals (Cartesian), change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volume; Triple integrals (Cartesian), orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds;

Unit 2: Integral theorems:

Gradient, curl and divergence. Scalar line integrals, vector line integrals, scalar surface integrals, vector surface integrals, Theorems of Green, Gauss and Stokes.

Unit 3: Ordinary differential equations:

Exact, linear and Bernoulli's equations, Euler's equations, Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type. Second order linear differential equations with variable coefficients, method of variation of parameters, Cauchy-Euler equations.

Unit 4: Complex Variable – Differentiation:

Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions; elementary analytic functions (exponential, trigonometric, logarithm) and their properties; Conformal mappings, Mobius transformations and their properties.

Unit 5: Complex Variable – Integration:

Contour integrals, Cauchy Integral formula (without proof); Taylor's series, zeros of analytic functions, singularities, Laurent's series; Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral involving sine and cosine, Evaluation of certain improper integrals (Integration around small semicircles and rectangular contours).

| Unit 1: Basic | Proba | ability | and R | andon | n Varia | ables: | | | | | | |

Axiomatic definition of Probability - Conditional probability – Independent events - Total probability – Bayes theorem - Random variables – Discrete random variable - Probability mass function – Continuous random variable - Probability density functions – Cumulative distribution function-Properties- Expectation.

Unit 2: Standard Distributions and Bivariate Distributions:

Binomial, Poisson, Uniform, Exponential and Normal distributions and their properties. Two dimensional random variables – Joint probability density function – Cumulative distribution function – Marginal density function

Unit 3: Statistics:

Measures of Central tendency: Moments, skewness and Kurtosis - evaluation of statistical parameters for Binomial, Poisson and Normal distributions, Correlation and regression – Rank correlation- Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves.

Unit 4: Applied Statistics:

Test of significance: Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations. Small samples: Test for single mean, difference of means- Chi-square test for goodness of fit and independence of attributes.

Unit 5: Design of Experiments:

Analysis of variance – One way classification –Completely Randomised Design(C R D)– Two-way classification –Randomised Block Design(R.B.D)– Latin Square Design(L S D). **TEXT BOOKS**:

UNIT 1: INTRODUCTION

Fundamental difference between science and engineering- comparison between eye and camera, Bird flying and aircraft; major discoveries in biology- ; Classification based on: Cellularity-Unicellular and Multicellular; Ultra structure - prokaryotes and eukaryotes; three major kingdoms of life; Cell structure, intracellular organelles and their functions, comparison of plant and animal cells- Overview of Cell cycle and cell division

UNIT 2: BIOMOLECULES

Chemistry of biomolecules: Carbohydrates, Lipids, Proteins; classification of amino acids; classification of proteins based on structure and functions; Nucleic acids -types, structure and function of DNA and RNA

UNIT 3: GENES TO PROTEINS

Gene, Genome and chromosome; Central dogma of molecular biology; Classical experiments of DNA: Griffith and, Avery, McCarty and MacLeod, Meselson and Stahl - DNA replication, Transcription and Translation

UNIT 4: MICROBIOLOGY

Microscopy; Microbes as infectious agents - malaria, tuberculosis, typhoid, polio, dengue, AIDS;; cultivation of bacteria. Immunity - innate and acquired immunity - organs and cells of the immune system - classification of antibodies - types of T cells - transplantation, autoimmunity overview

Unit 5: APPLICATIONS OF BIOLOGY

Healthcare-antibiotics, vaccines, monoclonal antibodies, insulin and interferons; Beneficial bacteria - probiotic bacteria, nitrogen fixing bacteria, fermentation and fermented foods and products Environmental - waste water treatment, bioremediation; Biomaterials and biopolymers for medical and environmental applications; Biosensors;

FUNDAMENTALS OF HRM

Human Resource Development Systems-HR environment in India-Functions and Operations of a Personnel Office - Emerging HR Trends - HR information system

HRM FUNCTIONS

Job analysis and job design - HR planning – Recruitment - selection and induction- Staff Training and Development-Career planning and Development- Job Evaluation-Performance Appraisal and Potential Evaluation-Wage determination; salary structure-Wage policies and Regulations-Employee benefits and services

MOTIVATING HUMAN RESOURCES

Team and Team work - Collective Bargaining Employee Morale – Participative Management – Quality Circle – Empowerment –counseling and mentoring.

MAINTENANCE OF WORKERS

Compensation Management- Reward system – Labour relations –Employee Welfare, Safety and Health – Employee benefits and services – Promotion, Transfers and separation – Ethical issues in HR Management and International Human Resource Management - Legal Aspect of Labour **BUSINESS LAW**

Factories Act, 1948 - Industrial Dispute Act, 1947 - Industrial employment - Standing Orders

Act, 1946 – Trade Union Act, 1926 - Workmen Compensation Act, 1923, Employees State Insurance Act, 1948, Employees Provident Fund and Miscellaneous Provision Act, 1952, Payment of Gratuity Act, 1972. Payment of Wages Act 1936, Minimum wages Act, 1948– Payment of Bonus Act, 1965. Tamil Nadu Shops and Establishments Act.

INTRODUCTION

Concepts of entrepreneur, entrepreneurship and entrepreneur - Characteristics and competencies of a successful entrepreneur - General functions of an entrepreneur - Type of entrepreneurs - Role of entrepreneur in economic development - Distinction between an entrepreneur and a manager - Entrepreneur and Intrepreneur.

GROWTH OF ENTREPRENEURSHIP

Emergence of entrepreneurship - Economic and non economic factors for stimulating entrepreneurship development - Obstacles to entrepreneurship development in India - Growth of entrepreneurship in India.

WOMEN AND ENTREPRENEURSHIP

Concept of women entrepreneurship - Reasons for growth of woman entrepreneurship - Problems faced by them and remedial measures.

ROLE OF THE GOVERNMENT IN ENTREPRENEURSHIP DEVELOPMENT

Concept and meaning of entrepreneurship development - Need for entrepreneurship development programmes (EDPs) - Objectives of EDPs - Organizations for EDPs in India; NIESBUD, SISI – their roles and activities.

VENTURE PROMOTION AND PROJECT FORMULATION

Concept of projects classification of projects and project report - Project identification and selection - Constraints in project identification - Techniques of Project Identification, Significance – contents - formulation of project report - Need for Project Formulation - Elements of project Formulation

flowcharting. Role of Allowance, Process Capability, and Tolerance in Detailed Design and Assembly Product strategies, Market research – identifying customer needs – Analysis of product – locating ideas for new products, Selecting the right product, creative thinking, curiosity, imagination and brain storming - product specification.

NEW PRODUCT DESIGNING

Task - Structured approaches – clarification – search – external and internal – systematic exploration – conception, selection - methodology benefits. The value of appearance - principles and laws of appearance – incorporating quality, safety, and reliability into design. Man-machine considerations – Designing for ease of maintenance.

ROLE OF TECHNOLOGY IN DESIGNING

Integrating CAE, CAD, CAM tools – Simulating product performance and manufacturing process – Needs for industrial design-impact – Industrial design process – Technology driven products - user driven products – assessing the quality of the product.

METHODS AND PRINCIPLES OF DESIGNING

Methodologies and tools - Design axioms - Design for assembly and evaluation - Minimum part assessment - Taguchi Method - Robustness assessment - Manufacturing process rules -Designer's tool kit - Computer aided group process rules - Designer's tool kit - Computer aided group technology - Failure Mode Effective Analysis – Design for minimum number of parts – Development of modular design – Minimising part variations – Design of parts to be multifunctional, multi-use, ease of fabrication – Poka Yoka principles.

FEASIBILITY ANALYSIS

Estimation of manufacturing cost – cost procedures – Value Engineering - reducing the component cost and assembly cost – minimizing the system complexity – Basics and Principals of prototyping – Economic Analysis: Break even analysis. Classes of exclusive rights – Patents – Combination versus aggregation – Novelty and Utility – Design patents – Paten disclosure – Patent application steps - Patent Office prosecution - Sales of paten rights - Trade marks – copy rights.

| Objective (s) | Engir skills impro objec mana | This course aims to clarify the principles and basic concepts of Business Process Engineering. This course focuses on both quantitative and qualitative analytical kills and models essential to operations process design, management, and mprovement in both service and manufacturing oriented companies. The main objective of the course is to prepare the student to play a significant role in the management of a world class company which serves satisfied customers through empowered employees, leading to increased revenues and decreased costs. | | | | | | | | | | | | | |

BASIC CONCEPTS

Introduction to BPR Definition; the paradigm shifts in production; the positioning concept; the re-engineering visions; the benefits of business re-engineering.

METHODOLOGIES FOR BPR

Methodologies and Tools for BPR, Process management; dynamic business re-engineering change framework; steps to reengineer the process.

MODELLING THE BUSINESS

Tools used in Modelling the Business: flow-charting, business activity maps, relational diagrams, benefit/cost analysis. The enabling role of information technology in business re-engineering.

CHANGE MANAGEMENT

Change Management, Planned changes in business re-engineering projects; challenges of business change; business change development. Success factors in re-engineering. The assessment of business re-engineering.

BEST PRACTICES IN BPR

Best Practices in BPR, Case studies: Bell Atlantic, Nissan, Chrysler, Xerox, and Hewlett Packard etc.

ENGINEERING ETHICS

Functions of Being a Manager – Stock holder and stakeholder management – Ethical treatment of employees - ethical treatment of customers- supply chain management and other issues.

ENGINEERING AS SOCIAL EXPERIMENTATION

Senses of Ethics – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Professional and Professionalism – Professional ideals and virtues – Theories about right action – Self-interest – Customs and religion – Use of Ethical Theories.

ENGINEER RESPONSIBILTY FOR SAFETY

Corporate social responsibility - Collegiality and loyalty – Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Discrimination.

RESPONSIBILITY AND RIGHTS

Moral imagination, stake holder theory and systems thinking - One approach to management Decision – making Leadership.

GLOBAL ISSUES

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership – Sample code of conduct.

TRANSPORTATION MODELS AND ASSIGNMENT MODELS

Transportation Models (Minimising and Maximising Cases) – Balanced and unbalanced cases – Initial Basic feasible solution by N-W Corner Rule, Least cost and Vogel's approximation ethods - Check for optimality - Solution by MODI / Stepping Stone method - Cases of degeneracy - Transshipment Models - Assignment Models (Minimising and Maximising Cases) – Balanced and Unbalanced Cases - Solution by Hungarian and Branch and Bound Algorithms -Travelling Salesman problem - Crew Assignment Models.

INTEGER LINEAR PROGRAMMING AND GAME THEORY

Solution to pure and mixed integer programming problem by Branch and Bound and cutting plane algorithms - Game Theory - Two person Zero sum games - Saddle point, Dominance Rule, graphical and LP solutions.

REPLACEMENT MODELS AND DECISION THEORY

Replacement Models-Individuals replacement Models (With and without time value of money) – Group Replacement Models - Decision making under risk – Decision trees – Decision making under uncertainty.

PROJECT MANAGEMENT METHOD AND SIMULATION

PERT / CPM – Drawing the network, computation of processing time, floats and critical path. Resource leveling techniques - Application of simulation techniques for decision making.

INTRODUCTION TO QUALITY MANAGEMENT

Definitions - TOM framework, benefits, awareness and obstacles - Quality - vision, mission and policy statements - Customer Focus - customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality. Cost of quality.

PRINCIPLES AND PHILOSOPHIES OF QUALITY MANAGEMENT

Overview of the contributions of Deming, Juran Crosby, Masaaki Imai, Feigenbaum, Ishikawa, Taguchi, Shingeo and Walter Shewhart - Concepts of Quality circle, Japanese 5S principles and 8D methodology.

STATISTICAL PROCESS CONTROL AND PROCESS CAPABILITY

Meaning and significance of statistical process control (SPC) – construction of control charts for variables and attributed - Process capability - meaning, significance and measurement - Six sigma concepts of process capability - Reliability concepts - definitions, reliability in series and parallel, product life characteristics curve - Business process re-engineering (BPR) - principles, applications, reengineering process, benefits and limitations.

TOOLS AND TECHNIQUES FOR QUALITY MANAGEMENT

Quality functions development (QFD) – Benefits, Voice of customer, information organization, House of quality (HOQ), building a HOQ, QFD process. Failure mode effect analysis (FMEA) requirements of reliability, failure rate, FMEA stages, design, process and documentation.

TAGUCHI TECHNIQUES

Taguchi techniques – introduction, loss function, parameter and tolerance design, signal to noise ratio - Seven old (statistical) tools - Seven new management tools - Bench marking and POKA YOKE.

UNIT 1: DC CIRCUITS

DC Circuits: Electrical quantities – Electric Circuit Elements - Resistors - Inductors - Ccapacitors - Ohm's Law - Kirchhoff's Laws - Series and Parallel circuits - Analysis of DC circuits – Mesh - Nodal – Superposition - Thevenin - Norton Theorems - Simple problems UNIT II: AC CIRCUITS

Sinusoidal functions - Phasor representation - Real power - Reactive power - Aapparent power - Power factor - RMS value - Average value - Form and Peak factors - Analysis of single-phase AC series circuits consisting of RL, RC, RLC combinations – Problems - concept of three phase system.

UNIT III: DC MACHINES AND TRANSFORMERS

DC Machines: Construction and working principle of DC Generator and DC Motor - EMF equation – Torque equation - Related problems

Transformer: Construction - working and types - Ideal and practical transformer - Equivalent circuit - Losses in transformers - Regulation and Efficiency – problems

UNIT IV: AC MACHINES

Synchronous machine: Construction - working of alternator - EMF Equation - Problem - Working principle of synchronous motor

Three phase induction motor: Constructional details - Principle of operation – Types - Torqueslip characteristics - Starting torque - Relation between torque and slip - Losses and efficiency.

Single phase induction motor: Construction – Working principle - Types of single phase induction motor

UNIT V: ELECTRICAL INSTALLATIONS

Components of LT Switchgear - Switch Fuse Unit (SFU) – MCB – ELCB – MCCB - Domestic wiring - accessories - types - Staircase wiring - Fluorescent tube circuits – Earthing - Types of Batteries - Important Characteristics for Batteries - Elementary calculations for energy consumption - power factor improvement and battery Backup

LIST OF EXPERIMENTS

- 1. Verification of Kirchoff's Laws.
- 2. Verification of Mesh and Nodal analysis
- 3. Verification of Thevinin's and Norton's theorems

4. Measurement of electrical quantities-voltage current, power & power factor in RL and RC series circuits 5. Determine the power and power factor of RLC series circuit 6. Open circuit and load characteristics of Separately excited DC Generator 7. Open circuit and load characteristics of Self excited DC Generator 8. Draw the characteristic between output power versus efficiency of DC shunt motor 9. Verification of turns ratio on single phase transformer 10. Load test on single phase transformer 11. Load test on three phase squirrel cage induction motor. 12. Load test on single phase induction motor. 13. Load test on Alternator 14. Study of basic electrical installation components for LT switchgear 15. Residential house wiring using fuse, two way switches and lamp 16. Wiring layout for Fluorescent lamp 17. Experiment for Calculation of charging and discharging current of battery TEXT BOOK(S): 1. V.K. Mehta, "Principles of Electrical Engineering and Electronics", S. Chand & Company Ltd, 2012 2. I OPIC(S)

Unit 1: Projection of Points and Straight Lines

Importance of graphics – use of drafting instruments – BIS conventions and specifications – size, layout and folding of drawing sheets - lettering dimensioning and scales - Projection of points, located in all quadrants - projection of straight lines located in the first quadrant, determination of true lengths and true inclinations

Unit 2: Projection of Planes and Solids

Projection of polygonal surface and circular lamina located in first quadrant inclined to one or both reference planes-Projection of solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method

Unit 3: Section of Solids

Section of simple solids like prisms, pyramids, cylinder and cone in vertical position by cutting planes inclined to any one of the reference planes, obtaining true shape of section

Unit 4: Development of Surfaces

Development of lateral surfaces of simple and truncated solids - prisms, pyramids, cylinders and cones

Unit 5: Orthographic and Isometric Projection

Orthographic principles - missing view - free hand sketching in first angle projection from pictorial views. Principles of isometric projection – isometric view and projections of simple solids, truncated prisms, pyramids, cylinders and cones. Introduction to CAD software – menus and tools – drafting platform demonstration

Practical Modules

- 1. Construction of conic sections using CAD software
- 2. Construction of simple planes using exclusive commands like extend, trim etc.,
- 3. Construction of 3D model solids and sectional views
- 4. Generating 2D orthographic blue prints from 3D part models
- 5. Vectorization of simple building plan and elevation

locations, Syntax and Logical Errors in compilation, object and executable code, Arithmetic expressions and precedence, Conditional Branching and Loops, Writing and evaluation of conditionals and consequent branching, Iteration and loops.

UNIT 2: ARRAYS AND STRINGS

Arrays (1-D, 2-D), Character arrays and Strings,

UNIT 3: BASIC ALGORITHMS

Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of equations, notion of order of complexity through example programs (no formal definition required)

UNIT 4: FUNCTION

Functions (including using built in libraries), Parameter passing in functions, call by value,

Passing arrays to functions: idea of call by reference, Recursion, Recursion, as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function etc. Quick sort or Merge sort.

UNIT 5: STRUCTURE, POINTERS & FILE HANDLING

Structures, Defining structures and Array of Structures, Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation), File handling (only if time is available, otherwise should be done as part of the lab)

TEXT BOOKS

(i) Byron Gottfried, Schaum's Outline of Programming with C, McGraw-Hill

(ii) E. Balaguruswamy, Programming in ANSI C, Tata McGraw-Hill

REFERENCE BOOKS

(i) Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language, Prentice Hall of India

LIST OF EXPERIMENTS

Tutorial 1: Problem solving using computers:

Lab1: Familiarization with programming environment

Tutorial 2: Variable types and type conversions:

Lab 2: Simple computational problems using arithmetic expressions

Tutorial 3: Branching and logical expressions:

Lab 3: Problems involving if-then-else structures

Tutorial 4: Loops, while and for loops:

Lab 4: Iterative problems e.g., sum of series

Tutorial 5: 1D Arrays: searching, sorting:

Lab 5: 1D Array manipulation

Tutorial 6: 2D arrays and Strings

Lab 6: Matrix problems, String operations

Tutorial 7: Functions, call by value:

Lab 7: Simple functions

Tutorial 8 &9: Numerical methods (Root finding, numerical differentiation, numerical integration):

Lab 8 and 9: Programming for solving Numerical methods problems

Tutorial 10: Recursion, structure of recursive calls

Lab 10: Recursive functions

Tutorial 11: Pointers, structures and dynamic memory allocation

Lab 11: Pointers and structures

Tutorial 12: File handling: Lab 12: File operations

UNIT 2: BASICS OF SYSTEMS

Continuous time and discrete time systems, properties of systems: linearity, causality, time invariance, memory, stability, invertibility. Linear time invariant systems, convolution

UNIT 3: Z-TRANSFORM

Z-transform, region of convergence, properties of Z-transform, inverse Z-transform.

UNIT 4: FOURIER TRANSFORM

Fourier transform (FT) of discrete time signals, properties of FT, relation between Z-transform and FT.

Unit 5: DFT

Discrete Fourier transform (DFT), Properties of DFT, inverse DFT, Fast Fourier transform (FFT), Radix-2 FFT algorithms, butterfly structure

UNIT 1: BOOLEAN ALGEBRA AND LOGIC GATES

Number System-Code Conversion-Boolean algebra & theorems-Binary Arithmetic-Simplification of Boolean functions using Theorem, Karnaugh map and Tabulation method-Logic gates-Multilevel NAND & NOR Circuits implementations.

UNIT 2: COMBINATIONAL LOGIC

Combinational Circuits-Analysis and design procedure-Adder/Subtractor-Serial/Parallel Adder & Subtractor-Decoder & Encoder-Multiplexer& Demultiplexer-Design of Code Conversion Circuits-HDL for Combinational Logic.

UNIT 3: SEQUENTIAL LOGIC

Sequential Circuits-Analysis and design procedure-Flip Flops-Realization of one Flip Flop using other Flip Flops-Shift Registers & Counters-State Reduction & Assignment-HDL for Sequential Logic Circuits.

UNIT 4: ASYNCHRONS SEQUENTIAL LOGIC

Asynchronous Circuits-Analysis and design procedure-Primitive State/Flow table-Minimization of Primitive State table-State Assignment-Excitation table-Excitation map cycles-Races-Hazards.

UNIT 5: MEMORIES AND LOGICAL PROGRAMMING

Memory Classification-RAM-ROM-memory decoding- Error detection and correction -Programmable Logic Array (PLA)-Programmable Array Logic (PAL) - Application Specific Integrated Circuits.

LIST OF EXPERIMENTS

1. Verification of Boolean theorems using digital logic gates

2. Design and implementation of combinational circuits using basic gates for arbitrary functions, code converters, etc.

3. Design and implementation of 4-bit binary adder / subtractor using basic gates and MSI devices.

4. Design and implementation of parity generator / checker using basic gates and MSI devices.

- 5. Design and implementation of magnitude comparator
- 6. Design and implementation of application using multiplexers
- 7. Design and implementation of Flip-flops
- 8. Design and implementation of Shift registers
- 9. Design and implementation of Synchronous and Asynchronous counters

10. Coding combinational circuits using Hardware Description Language (HDL software required)

11. Coding sequential circuits using HDL (HDL software required)

UNIT 5 : I/O ORGANIZATION

Accessing I/O devices – Interrupts – Direct Memory Access – Buses – Interface Circuits – Standard I/O Interfaces (PCI, SCSI, USB).

List of Practical Components

- 1. Implementation of booth algorithm
- 2. Implementation of sequential circuit binary multiplier
- 3. Implementation of bit pair recording
- 4. Implementation of carry save addition
- 5. Implementation of Integer restoring division
- 6. Implementation of Integer Non restoring division
- 7. Implementation of twos complement addition
- 8. Implementation of twos complement subtraction

UNIT 1: INTRODUCTION TO OPERATING SYSTEMS

Introduction: Concept of Operating Systems, Generations of Operating systems, Types of Operating Systems, OS Services, System Calls, Structure of an OS - Layered, Monolithic, Microkernel Operating Systems, Concept of Virtual Machine. Case study on UNIX and WINDOWS Operating System

UNIT 2: PROCESS SCHEDULING

Processes: Definition, Process Relationship, Different states of a Process, Process State transitions, Process Control Block (PCB), Context switching **Thread:** Definition, Various states, Benefits of threads, Types of threads, Concept of multithreads,

Process Scheduling: Foundation and Scheduling objectives, Types of Schedulers, Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time; Scheduling algorithms: Pre-emptive and Non pre-emptive, FCFS, SJF, RR; Multiprocessor scheduling: Real Time scheduling: RM and EDF.

UNIT 3: PROCESS SYNCHRONIZATION AND DEADLOCK

Operations on Processes, Cooperating Processes, Inter-process Communication: Critical Section, Race Conditions, Mutual Exclusion, Hardware Solution, Strict Alternation, Peterson's Solution, The Producer Consumer Problem, Semaphores, Event Counters, Monitors, Message Passing, Classical IPC Problems: Reader's & Writer Problem, Dinning Philosopher Problem etc. **Deadlocks:** Definition, Necessary and sufficient conditions for Deadlock, Deadlock Prevention, Deadlock Avoidance: Banker's algorithm, Deadlock detection and Recovery.

UNIT 4: MEMORY MANAGEMENT

Memory Management: Basic concept, Logical and Physical address map, Memory allocation: Contiguous Memory allocation – Fixed and variable partition–Internal and External fragmentation and Compaction; Paging: Principle of operation – Page allocation – Hardware support for paging, Protection and sharing, Disadvantages of paging.

Virtual Memory: Basics of Virtual Memory – Hardware and control structures – Locality of reference, Page fault, Working Set, Dirty page/Dirty bit – Demand paging, Page Replacement algorithms: Optimal, First in First Out (FIFO), Second Chance (SC), Not recently used (NRU) and Least Recently used (LRU).

UNIT 5: FILE AND SECONDARY STORAGE MANAGEMENT

I/O Hardware: I/O devices, Device controllers, Direct memory access Principles of I/O Software **Disk Management:** Disk structure, Disk scheduling - FCFS, SSTF, SCAN, C-SCAN, Disk reliability, Disk formatting, Boot-block, Bad blocks

File Management: Concept of File, Access methods, File types, File operation, Directory structure, File System structure, Allocation methods (contiguous, linked, indexed), Free-space management (bit vector, linked list, grouping), directory implementation (linear list, hash table), efficiency and performance.

List of Practical Components:

- 1. Windows and UNIX Commands
- 2. Simulation of System calls
- 3. Implementation of CPU Scheduling algorithms
- 4. Simulation of IPC in UNIX
- 5. Implementation of deadlock avoidance algorithms
- 6, Implementation of Page replacement algorithms
- 7. Implementation of memory management functions
- 8. Implementation of disk scheduling algorithms

UNIT 1: INTRODUCTION

History and basic idea of Internet; Internet services: telnet, e-mail, ftp, WWW- HTML- List, Tables, Images, Forms, Frames, XML- Document type definition, XML Schemas,* Document Object model - Web page design: Designing web pages with HTML5 – New elements added - semantic elements -attributes of form -graphic elements- multimedia elements-APIs-CSS-javascript-Jquery-AJAX

UNIT 2: DYNAMIC HTML

Introduction – Object refers, Dynamic style, Dynamic position, frames, navigator, Event Model – On check – On load – On error – Mouse related – Form process – Event Bubblers – Filters – Transport with the Filter – Creating Images – Adding shadows – Creating Gradients – Creating Motion with Blur – Data Binding – Simple Data Binding – Moving with a record set – Sorting table data – Binding of an Image and table.

UNIT 3: MULTIMEDIA

Audio and video speech synthesis and recognition – Electronic Commerce – E-Business Model – E- Marketing – Online Payments and Security – Web Servers – HTTP request types – System Architecture – Client Side Scripting and Server side Scripting – Accessing Web servers – IIS – Apache web server.

UNIT 4 : ASP

ASP – Working of ASP – Objects –File System Objects – Session tracking and cookies – ADO – Access a Database from ASP –Server side Active-X Components – Web Resources – XML – Structure in Data – Name spaces– DTD – Vocabularies – DOM methods

UNIT 5: DATABASE CONNECTIVITY

Database Connectivity - ADO.NET- SqlConnection- SqlCommand- Reading Data with the SqlDataReader - Working with Disconnected Data - Adding Parameters to Commands - Using Stored Procedures

Circular queue implementation- Applications of stacks and queue.

UNIT 2: TREE STRUCTURES

Tree ADT- Tree Traversals Binary Tree ADT – Express trees Application of trees- binary search tree ADT- Threaded Binary Trees. AVL Trees – Splay Trees – B – Tree – heaps – Binary heaps – Applications of binary heaps

UNIT 3: HASHING AND SORTING

Hashing- Separate chaining – open addressing – rehashing – extendible hashing – Sorting – Insertion Sort – Selection Sort – Heap Sort – Merge Sort – Quick Sort

UNIT 4: GRAPHS

Graph Definitions and types, Graph Representation -topological sorting – breadth first traversal – shortest path algorithm – minimum spanning tree – Prims and Kruskal's algorithm – Depth first traversal- biconnectivity- Euler circuits – Applications of graphs

UNIT 5: ALGORITHM DESIGN TECHNIQUES

Introduction – Greedy Method- Divide and Conquer – Dynamic Programming- Back Tracking-Branch and Bound.

PRACTICE COMPONENTS

- 1. Write a program to implement Stack Using Array and Linked list.
- 2. Write a program to implement Queue Using Array and Linked list.
- 3. Write a program to create a singly linked list.
- 4. Develop a date structure for trees, Include addition, deletion, access procedures. Apply this to problems like students list, passengers list, and polynomial representations.
- 5. Write a program to implement Binary Search Tree.
- 6. Write a program to implement Conversion of Infix Expression to Postfix Expression.
- 7. Write a program to implement Conversion of Postfix Expression to Infix Expression.
- 8. Write a program to implement Postfix Expression Evaluation.
- 9. Write an algorithm to convert a tree into a binary tree. Also traverse the tree.
- 10. Write a program to check for balanced parentheses of an expression using array implementation of stack.
- 11. Write a program to check for balanced parentheses of an expression using linked list implementation of stack.
- 12. Write a program to sort a set of elements using bubble sort, insertion sort, shell sort, heap sort, merge sort and quick sort.
- 13. Write a C program to implement the Dijkstra's Algorithm
- 14. Write C program for the implementation of minimum spanning using Kruskal

Write C program for the implementation of minimum spanning using Prims algorithm

Noise: Source of Noise - External Noise- Internal Noise- Noise Calculation. Introduction to Communication Systems: Modulation – Types - Need for Modulation. Theory of Amplitude Modulation - Evolution and Description of SSB Techniques - Theory of Frequency and Phase Modulation – Comparison of various Analog Communication System (AM - FM - PM).

UNIT 2: DIGITAL COMMUNICATION

Amplitude Shift Keying (ASK) – Frequency Shift Keying (FSK) Minimum Shift Keying (MSK) –Phase Shift Keying (PSK) – BPSK – QPSK – 8 PSK – 16 PSK - Quadrature Amplitude Modulation (QAM) – 8 QAM – 16 QAM – Bandwidth Efficiency– Comparison of various Digital Communication System (ASK – FSK – PSK – QAM).

UNIT 3: DATA AND PULSE COMMUNICATION

Data Communication: History of Data Communication - Standards Organizations for Data Communication- Data Communication Circuits - Data Communication Codes - Error Detection and Correction Techniques - Data communication Hardware - serial and parallel interfaces. Pulse Communication: Pulse Amplitude Modulation (PAM) – Pulse Time Modulation (PTM) – Pulse

code Modulation (PCM) - Comparison of various Pulse Communication System (PAM – PTM – PCM).

UNIT 4: SOURCE AND ERROR CONTROL CODING

Entropy, Source encoding theorem, Shannon fano coding, Huffman coding, mutual information, channel capacity, channel coding theorem, Error Control Coding, linear block codes, cyclic codes, convolution codes, viterbi decoding algorithm.

UNIT 5: MULTI-USER RADIO COMMUNICATION

Advanced Mobile Phone System (AMPS) - Global System for Mobile Communications (GSM) -Code division multiple access (CDMA) – Cellular Concept and Frequency Reuse - Channel Assignment and Hand off - Overview of Multiple Access Schemes - Satellite Communication -Bluetooth.

UNIT 1: INTRODUCTION

Need of OOP, History, Development, Concepts, and Benefits of OOP. Object-oriented paradigm - elements of object oriented programming - Merits and demerits of OO methodology – Structure of a C++ program - tokens, keywords, identifiers, data types, expressions, control structures, declaration and initialization of variables, operators, expressions and implicit conversions. Functions in C++.

UNIT 2: OBJECT ORIENTED PROGRAMMING IN C++

Classes and objects - member functions - constructors and destructors - operator overloading and type conversions – Inheritance - virtual functions and polymorphism.

UNIT 3: FILE HANDLING

Managing console I/O operations: C++ streams, C++ Stream classes, formatted and unformatted I/O operations - File handling in C++: classes for file stream operations, Opening, closing, and updating files, file pointers and their manipulations - Templates and exception handling: class and function templates

UNIT 4 : JAVA INTRODUCTION

An overview of Java - data types - variables and arrays, operators, control statements, classes, objects, methods – Inheritance.

UNIT 5: JAVA PROGRAMMING

Packages and Interfaces- Exception handling - Multithreaded programming - Strings, Input /Output

PRACTICAL COMPONENTS

- 1. Programs Using Functions
 - Functions with default arguments
 - Implementation of Call by Value, Call by Address and Call by Reference
- 2. Simple Classes for understanding objects, member functions and Constructors

| | - Classes with primitive data members |
|------|--|
| | - Classes with arrays as data members |
| | - Classes with pointers as data members – String Class |
| | - Classes with constant data members |
| | - Classes with static member functions |
| 3. | Compile time Polymorphism |
| | - Operator Overloading including Unary and Binary Operators. |
| | - Function Overloading |
| 4. | Runtime Polymorphism |
| | - Inheritance |
| | - Virtual functions |
| | - Virtual Base Classes |
| | - Templates |
| 5. | File Handling |
| | - Sequential access |
| | - Random access |
| 6. | Simple Java applications |
| | - for understanding reference to an instance of a class (object), methods |
| | - Handling Strings in Java |
| 7. | Simple Package creation. |
| | - Developing user defined packages in Java |
| 8. | Interfaces |
| | - Developing user-defined interfaces and implementation |
| | - Use of predefined interfaces |
| 9. | Threading |
| | - Creation of thread in Java applications |
| | - Multithreading |
| 10 |). Exception Handling Mechanism in Java |
| | - Handling pre-defined exceptions |
| | - Handling user-defined exceptions |

UNIT 1: SIGNALS AND SYSTEMS

Basic elements of digital signal Processing – Concept of frequency in continuous time and discrete time signals – Sampling theorem – Discrete time signals, Discrete time systems – Analysis of Linear time invariant systems – Z transform –Convolution and correlation - MATLAB programs for signals and systems.

UNIT 2: FAST FOURIER TRANSFORMS

Introduction to DFT – Efficient computation of DFT Properties of DFT – FFT algorithms – Radix-2 and Radix-4 FFT algorithms – Decimation in Time – Decimation in Frequency algorithms –Use of FFT algorithms in Linear Filtering.

UNIT 3: IIR FILTER DESIGN

Structure of IIR – Analog filter design - Discrete time IIR filter from analog filter – IIR filter design by Impulse Invariance, Bilinear transformation, Approximation of derivatives – Design of IIR filter in the Frequency domain.

UNIT 4 : FIR FILTER DESIGN

Structure for FIR systems - Symmetric & Anti-symmetric FIR filters – Linear phase FIR filter – Filter design using windowing techniques (Rectangular Window, Kaiser Window), Frequency sampling techniques - Finite word length effects in digital Filters: Errors, Limit Cycle, Noise Power Spectrum.

UNIT 5: APPLICATION OF DSP

Multirate signal processing: Decimation, Interpolation, Sampling rate conversion by a rational factor –Application of DSP: Model of speech wave form – Vocoder – Musical sound processing, Digital music synthesis.

TEXT BOOK

1. John G. Proakis & Dimitris G.Manolakis, "Digital Signal Processing – Principles, Algorithms & Applications", Fourth Edition, Pearson Education / Prentice Hall, 2007.

REFERENCES

- 1. Alan V Oppenheim, Ronald W Schafer and John R Buck, "Discrete Time Signal Processing", PHI/Pearson Education, 2010.
- 2. Sanjit K. Mitra, "Digital Signal Processing A Computer Based Approach", Tata Mc Graw Hill, 2007.
- 3. Andreas Antoniou, "Digital Signal Processing", Tata Mc Graw Hill, 2006.

PRACTICAL EXPERIMENTS

- 1. Generation of input Signals.
- 2. Analysis of linear system [with convolution and de-convolution operation]
- 3. FIR filters design by Rectangular window using MATLAB Programming.
- 4. FIR filters design by Kaiser Window using MATLAB Programming.
- 5. IIR Butterworth filters design using MATLAB Programming.
- 6. IIR Chebyshev filters design using MATLAB Programming.
- 7. Implementation of FFT
- 8. Implementation of Interpolation and decimation
- 9. Estimation of power spectral density using MATLAB Programming
- 10. Spectral analysis using MATLAB Programming
- 11. Verification of linear phase characteristics of FIR filters .

UNIT 1: MICROCONTROLLER ARCHITECTURE

Introduction to Microprocessor – Architecture, Memory Organization, Pin configuration. Introduction to 8051 Microcontroller, Architecture, Pin configuration, Memory organization, Input /Output Ports, Counter and Timers, Serial communication, Interrupts.

UNIT 2: ASSEMBLY LANGUAGE PROGRAMMING OF 8051

Instruction set, Addressing modes, Development tools, Assembler Directives, Programming based on Arithmetic & Logical operations, I/O parallel and serial ports, Timers & Counters, and ISR.

UNIT 3: INTRODUCTION TO EMBEDDED SYSTEMS

Overview of Embedded System Architecture, Application areas, Categories of embedded systems, specialties of embedded systems. Recent trends in embedded systems. Brief introduction to embedded microcontroller cores CISC, RISC, ARM, DSP and SoC.

UNIT 4: EMBEDDED / REAL TIME OPERATING SYSTEM

Architecture of kernel, Task and Task scheduler, Interrupt service routines, Semaphores, Mutex, Mailboxes, Message queues, Event registers, Pipes, Signals, Timers, Memory management, Priority inversion problem. Off-the-Shelf Operating Systems, Embedded Operating Systems, Real Time Operating System (RTOS) and Handheld Operating Systems.

UNIT 5: EMBEDDED SYSTEM - DESIGN CASE STUDIES

Digital clock, Battery operated smart card reader, Automated meter reading system, Digital camera.

TEXT BOOKS

- 4. Doughlas V.Hall, "Microprocessors and Interfacing, Programming and Hardware", TMH, 2012.

PRACTICAL EXPERIMENTS

- 1. Arithmetic Operations with 8051
- 2. Finding sum of elements in an array
- 3. Number Conversions

- 4. To find the largest number in a data array
- 5. To write a program to initiate 8251 and to check the transmission and reception of character.
- 6. To interface 8253 programmable interval timer.
- 7. Stepper Motor Interfacing with 8051
- 8. Data transfer programs using 8051
- 9. Timers and Interrupts
- 10. Serial Communication
- 11. Interfacing with Traffic Generator ,DAC, ADC
- 12. Basic and Interfacing Programs Using Embedded C
- 13. Real time system programs (Embedded C)
- 14. KEIL software example programs
- 15. ARM/Atom based Application Development:
 - i. Programs to practice data processing instructions.
 - ii. Interfacing programs
 - iii. Program that uses combination of C and ARM/Atom assembly code.

UNIT 1: INTRODUCTION

Intelligent Agents – Agents and environments - Good behavior – The nature of environments – structure of agents - Problem Solving - problem solving agents – example problems – searching for solutions – uniformed search strategies - avoiding repeated states – searching with partial information.

UNIT 2: SEARCHING TECHNIQUES

Informed search and exploration – Informed search strategies – heuristic function – local search algorithms and optimistic problems – local search in continuous spaces – online search agents and unknown environments - Constraint satisfaction problems (CSP) – Backtracking search and Local search for CSP – Structure of problems - Adversarial Search – Games – Optimal decisions in games – Alpha – Beta Pruning.

UNIT 3: KNOWLEDGE REPRESENTATION

First order logic – representation revisited – Syntax and semantics for first order logic – Using first order logic – Knowledge engineering in first order logic - Inference in First order logic – prepositional versus first order logic – unification and lifting – forward chaining – backward chaining - Resolution

UNIT 4: LEARNING

Learning from observations - forms of learning - Inductive learning - Learning decision trees - Ensemble learning - Knowledge in learning - Logical formulation of learning -Explanation based learning - Learning using relevant information - Inductive logic programming - Statistical learning methods - Learning with complete data - Learning with hidden variable - EM algorithm- Instance based learning - Neural networks

UNIT 5: APPLICATIONS

Communication – Communication as action – Formal grammar for a fragment of English – Syntactic analysis – Augmented grammars – Semantic interpretation – Ambiguity and disambiguation – Discourse understanding – Grammar induction - Probabilistic language processing - Probabilistic language models – Information retrieval – Information Extraction – Machine translation.

UNIT 1: INTRODUCTION TO NETWORKS AND PHYSICAL LAYER

Introduction: Networks, Uses of Networks, Network Topology, Transmission Modes - Network Hardware - Transmission technology - Categories of Networks - Network Software - Protocol Hierarchy - Design issues for the layers – Services - Reference Model: TCP/IP and OSI - Internet: Architecture of Internet - Physical Layer: Need and Issues, Data Communication, Guided transmission media, Wireless Transmission, Communication Satellites, Multiplexing and Switching.

UNIT 2 : DATA LINK LAYER

DLL: Need and Issues - Error Detection and Correction - Protocol Verification and Data Link Layer protocols - MAC Sub layer - Channel Allocation Problem - Multiple Access Protocols – Ethernet - Wireless LANs and VLAN - Data Link Layer Switching - Connectivity Devices -Configuration of Switches.

UNIT 3: NETWORK LAYER

Network Layer - Need and Issues - Routing algorithms - Congestion Control Algorithms - QOS - Network Layer in Internet - Network Addressing - Configuration of Router - ARP and RARP.

UNIT 4: TRANSPORT LAYER

Transport Layer - Need and Issues - Transport service - Elements of Transport Protocols - Simple Transport Protocol - TCP and UDP.

UNIT 5: APPLICATION LAYER

Application Layer - Need and Issues - DNS - Electronic Mail - FTP - HTTP - WWW - RPC -

RMI.

List of Experiments:

- 1. Study of Socket Programming
- 2. Socket Programming for Client-Server Communication
- 3. Configuration of Switch
- 4. Implementation of ARP
- 5. Implementation of RARP
- 6. Configuration of Router
- 7. Enable Client Server Communication using TCP Protocol
- 8. Implementation of Client Server communication using UDP Protocol
- 9. Implementation of FTP client
- 10. Download a File from HTTP Server
- 11. Implementation of Port Scanning

UNIT 1: INTRODUCTION

Introduction to File Systems - Introduction to Database Systems - Database System Structure – Views of Data - Data Models - Types of Data Models – Database Languages - Database Users and Administrator— ER Model - E-R Diagrams.

UNIT 2: RELATIONAL MODEL

Relational Model – Catalog – Types – Keys - Relational Algebra- Domain - Tuple Relational Calculus - SQL – Data Definition - Queries In SQL – Updates - Views – Integrity and Security – Sub Queries - Correlated Sub Queries - Relational Database Design – Functional Dependences And Normalization For Relational Databases (up to BCNF).

UNIT 3: DATA STORAGE AND QUERY PROCESSING

Record storage and Primary file organization- Secondary storage Devices- Operations on Files -Heap File - Sorted Files- Hashing Techniques – Index Structure for files –Different types of Indexes – B-Tree - B+Tree – Database Tuning - Query Processing.

UNIT 4: TRANSACTION MANAGEMENT

Transaction Concepts – Transaction Recovery – ACID Properties –Need for Concurrency Control - Schedule and Recoverability- Serializability and Schedules – Concurrency Control – Types of Locks- Two Phases locking- Deadlock- Time Stamp based Concurrency Control – Recovery Techniques – Concepts - Immediate Update - Deferred Update - Shadow Paging.

UNIT 5: DATABASE SECURITY AND ADVANCED DATABASES

Data Classification - Threats and Risks – Database Access Control – Types of Privileges – Cryptography - Statistical Databases - Distributed Databases – Architecture - Transaction Processing - Relevance Ranking - Crawling and Indexing Web-Object Oriented Databases - XML Databases.

PRACTICAL COMPONENTS

- 1. Implementation of DDL commands in RDBMS.
- 2. Implementation of DML and DCL commands in RDBMS.
- 3. Implementation of Date and Built in Functions of SQL.
- 4. Implementation of Simple Programs.
- 5. Implementation of High-level language extension with Cursors.
- 6. Implementation of High level language extension with Triggers
- 7. Implementation of stored Procedures and Functions.
- 8. Embedded SQL.
- 9. Database design using E-R model and Normalization.
- 10. Database Connectivity using ADO
- 11. Database Connectivity using ODBC
- 12. Database Connectivity using JDBC

Mapping of COs with POs PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO8 PO9 PO10 | PO11 | PO12 CO CO1 L Η Η CO₂ М Η Μ Η Η CO3 Η L Η CO4 Η Η CO5 Η Η **Course Topic(s) UNIT 1 : SOFTWARE ENGINEERING CONCEPTS** Software and Software Engineering - Project Management Concepts - Software Engineering Paradigms - Generic Process Models, Assessment and Improvement - Water Fall Life Cycle Model - Prototype Model - RAD Model - Spiral Model - Incremental Model - Requirements Engineering **UNIT 2: MANAGING SOFTWARE PROJECTS** Metrics : Metrics in Process and Project Domains - Software Measurement - Metrics for Software Quality - Integrating Metrics in a Software Engineering Process - Estimation, Scheduling – Risk Management – Review Techniques - Software Quality Assurance **UNIT 3 : DESIGN CONCEPTS** Design Process - Design Principles - Design Concepts - Software Architecture - Architectural Style, Design and Mapping - User Interface Design **UNIT 4: SOFTWARE TESTING AND DEBUGGING** Testing Fundamentals and Strategies - White-box and Black-box testing - Basis Path Testing - Data Flow Testing - Testing for Special Environments - Unit Testing, - Integration Testing - Validation Testing - System Testing – Debugging - Software Maintenance – Software **Configuration Management UNIT 5 : ADVANCED TOPICS** Computer Aided Software Engineering - Clean room software engineering - Reengineering -**Reverse Engineering** PRACTICAL COMPONENTS 1. Introduction to UML (Unified Modeling Language) b) Visualizing c) Specifying d) Constructing e) Documenting 2. Program Analysis and Project Planning : Study of Problem definition – Identification of project Scope, Objectives, Infrastructure 3. Preparation of System Requirement Specification (SRS) and related analysis documents as Per the guidelines in ANSI/IEEE Std 830-1984. 4. Create UML Diagrams (Use diagrams, Activity diagrams, Class diagrams, Sequence diagrams) 5. Software Development (Implementation) 6. Software Testing and Prepare test plan, 7. Execution of Test cases.

8. Debugging and demonstration.

Basic Assembler Functions – Machine Dependent Assembler Features – Machine Independent Assembler Features - Program relocation - Machine independent assembler features - Literals -Symbol-defining statements - Expressions - One pass assemblers and Multi pass

assemblers - Implementation example - MASM assembler. Practical: Assembly language programming

UNIT 3: LOADERS AND LINKERS

Basic loader functions - Design of an Absolute Loader – A Simple Bootstrap Loader -Machine dependent loader features - Relocation – Program Linking – Algorithm and Data Structures for Linking Loader - Machine-independent loader features - Automatic Library Search – Loader Options - Loader design options - Linkage Editors – Dynamic Linking – Bootstrap Loaders - Implementation example - MSDOS linker. Practical: Dynamic link programming

UNIT 4: MACRO PROCESSORS

Basic macro processor functions - Macro Definition and Expansion – Macro Processor Algorithm and data structures - Machine-independent macro processor features -Concatenation of Macro Parameters – Generation of Unique Labels – Conditional Macro Expansion – Keyword Macro Parameters-Macro within Macro-Implementation example -MASM Macro Processor – ANSI C Macro language. Practical: Macro implementation

UNIT 5: SYSTEM SOFTWARE TOOLS

Text editors - Overview of the Editing Process - User Interface – Editor Structure. -Interactive debugging systems - Debugging functions and capabilities – Relationship with other parts of the system – User-Interface Criteria. Practical: User interface design

UNIT 1 : UML DIAGRAMS

Introduction to OOAD – Unified Process - UML diagrams – Use Case – Class Diagrams– Interaction Diagrams – State Diagrams – Activity Diagrams – Package, component and Deployment Diagrams

UNIT 2 : DESIGN PATTERNS

GRASP: Designing objects with responsibilities – Creator – Information expert – Low Coupling – High Cohesion – Controller - Design Patterns – creational - factory method - structural – Bridge – Adapter -behavioral – Strategy – observer

UNIT 3 : CASE STUDY

Case study – the Next Gen POS system, Inception -Use case Modeling - Relating Use cases – include, extend and generalization - Elaboration - Domain Models - Finding conceptual classes and description classes – Associations – Attributes – Domain model refinement – Finding conceptual class Hierarchies - Aggregation and Composition

UNIT 4 : APPLYING DESIGN PATTERNS

System sequence diagrams - Relationship between sequence diagrams and Logical architecture and UML package diagram – Logical architecture refinement - UML class diagrams - UML interaction diagrams - Applying GoF design patterns

UNIT 5: CODING AND TESTING

Mapping design to code – Testing: Issues in OO Testing – Class Testing – OO Integration Testing – GUI Testing – OO System Testing

UNIT II: FUNCTIONS AND DATA STRUCTURES IN PYTHON

Functions-basics of functions, functions as objects, recursive functions, List -methods to process lists, Shallow & Deep copy, Nested lists, lists as matrices, lists as stacks, Queues, -De-queues, Tuples -basic operations on tuples, nested tuples, Dictionaries -operations on dictionary, ordered dictionary, iteration on dictionary, conversion of lists & strings into dictionary, Sets & frozen sets, looping techniques on lists & dictionaries, Lamda, filter, reduce, map, list comprehension, iterators and generators.

UNIT III: OBJECTS IN PYTHON

Class and instance attributes, inheritance, multiple inheritance, methos resolution order, magic methods and operator overloading, meta classes, abstract and inner classes, exception handling, modular programs and packages.

UNIT IV: NUMERICAL ANALYSIS IN PYTHON

Introduction to NumPy, NumPy array object, Creating a multidimensional array, NumPy numerical types -Data type objects, Character codes, dtype constructors. dtype attributes. Onedimensional slicing and indexing. Manipulating array shapes --Stacking arrays, Splitting NumPy arrays, NumPy array attributes, Converting arrays, Creating array views and copies. Indexing with a list of locations. Indexing NumPy arrays with Booleans. Broadcasting NumPy arrays.

UNIT V: DATA MANIPULATION AND VISUALIZATION IN PYTHON

Data frames in panda, Creating dataframes from .csv and excel files, Lists of tuples, Dataframes aggregation and concatenation, plotting data using matplotlib & panda

Unit I - Explore

Introduction to Data Science - **Data Visualization with ggplot2**- Introduction – First steps - Aesthetic Mappings – Common Problems – Facets – Geometric objects- Statistical Transformations – Positional Adjustments - **Data Transformation with dplyr:** Introduction – Filter Rows with filter() –Arrange Rows with arrange() – Select Columns with select() –Add New Variables with mutate() - **Exploratory Data Analysis:** Introduction- Questions-Variations- Missing values- Covariation – Patterns and Models – ggplot2 Calls.

Unit II - Wrangle

Tibbles with tibble – Introduction - Creating Tipples - Tibbles Vs data.frame - Data Import with readr- Introduction - Parsing a vector - Parsing a file – writing to a file – **Tidy Data with tidyr** – Introduction – Tidy Data – Spreading and Gathering – Separating and Pull – Missing Values – Nontidy Data – **Relational Data with dplyr** – Introduction – nycflights13 – Keys- Mutating Joins – Filtering Joins – Join Problems – Set Operations – Strings with stringr – String Basics – Matching Patterns with Regular Expressions.

Unit III - Program

Pipes with magrittr – Introduction – Piping Alternatives – When Not to use the Pipe – other tools from magrittr – **Functions** – Introduction – Function are for Humans and Computers – Conditional Execution – Function Arguments – Return Values – Environment – **Vectors** – Introduction – Vector Basics – Important types of Atomic Vector – Using Atomic Vectors – Recursive Vectors (Lists) – Attributes – Augmented Vectors – Iteration with purr – Introduction – For Loops – For Loop Variations – For Loop Vs Functionals – The Map Functions – Mapping over Multiple Arguments.

Unit IV - Model

Model Basics with modelr – Introduction – A simple model – Visualizing Models – Formulas and Families – Missing Values – Other Model Families – **Model Building** – Introduction – Why are Low-Quality Diamonds More Expensive? – What Affects the Number of Daily Flights? – Learning more about Models – **Many Models with purr and broom** – Introduction – gapminder – List-Columns – Creating List-Columns – Simplifying List-columns – Making Tidy Data with broom.

Unit V - Communicate

R Markdown – Introduction – R Markdown Basics – Text Formatting with Markdown – Code Chunks – Troubleshooting – YAML Header – **Graphics for Communication with ggplot2** – Introduction – Label – Annotations – Scaling – Zooming – Themes – Saving your plots – **R Markdown Formats** – Introduction – Output options – Documents – Notebooks – Presentations – Dashboards – Interactivity – Websites – Other Formats

UNIT 2 : JAVA BASED COMPONENT TECHNOLOGIES

Threads – Java Beans – Events and connections – properties – introspection – JAR files – reflection – object serialization – Enterprise Java Beans – Distributed Object models – RMI and RMI-IIOP. Practical: Deploying EJB for simple arithmetic operator.

UNIT 3 : CORBA COMPONENT TECHNOLOGIES

Java and CORBA – Interface Definition language – Object Request Broker – system object model – portable object adapter – CORBA services – CORBA component model – containers – application server – model driven architecture. Practical: SIMPLE APPLICATION USING CORBA

. UNIT 4: NET BASED COMPONENT TECHNOLOGIES

COM – Distributed COM – object reuse – interfaces and versioning – dispatch interfaces – connectable objects – OLE containers and servers – Active X controls – .NET components - assemblies – appdomains – contexts – reflection – remoting. Practical: Sample applications.

UNIT 5: COMPONENT FRAMEWORKS AND DEVELOPMENT

Connectors – contexts – EJB containers – CLR contexts and channels – Component Frameworks- Object-Oriented Frameworks (OOFW) - Black Box component framework – directory objects – cross-development environment – component-oriented programming – Component design and implementation tools – testing tools - assembly tools. Practical: Distributed objects deployment-EJB and CORBA

UNIT 1: INTRODUCTION TO COMPILING

Compilers – Analysis of the source program – Phases of a compiler – Cousins of the Compiler – Grouping of Phases – Compiler construction tools - Lexical Analysis - Role of Lexical Analyzer – Input Buffering – Specification of Tokens - Recognition of tokens.

UNIT 2: SYNTAX ANALYSIS

Role of the parser –Writing Grammars –Context-Free Grammars – Top Down parsing -Recursive Descent Parsing - Predictive Parsing – Bottom-up parsing - Shift Reduce Parsing – Operator Precedent Parsing - LR Parsers - SLR Parser - Canonical LR Parser - LALR Parser.

UNIT 3: INTERMEDIATE CODE GENERATION

Intermediate languages – Declarations – Assignment Statements – Boolean Expressions – Case Statements – Back patching – Procedure calls.

UNIT 4: CODE GENERATION

Issues in the design of code generator – The target machine – Runtime Storage management – Basic Blocks and Flow Graphs – Next-use Information – A simple Code generator – DAG representation of Basic Blocks – Peephole Optimization.

UNIT 5: CODE OPTIMIZATION AND RUN TIME ENVIRONMENTS

Introduction– Principal Sources of Optimization – Optimization of basic Blocks – Introduction to Global Data Flow Analysis – Runtime Environments – Source Language issues – Storage Organization – Storage Allocation strategies – Access to non-local names – Parameter Passing. **TEXT BOOK**

UNIT 1: 3D GRAPHICS FOR GAME PROGRAMMING

Coordinate Systems, Ray Tracing, Modeling in Game Production, Vertex Processing Rasterization, Fragment Processing and Output Merging, Illumination and Shaders, Parametric Curves and Surfaces, Shader Models, Image Texturing, Bump Mapping, Advanced Texturing, Character Animation, Physics-based Simulation

UNIT 2 : GAME DESIGN PRINCIPLES

Character development, Story Telling, Narration, Game Balancing, Core mechanics, Principles of level design, Genres of Games, Collision Detection, Game Logic, Game AI, Path Finding

UNIT 3 : GAMING ENGINE DESIGN

Renderers, Software Rendering, Hardware Rendering, and Controller based animation, Spatial Sorting, Level of detail, collision detection, standard objects, and physics

UNIT 4: GAMING PLATFORMS AND FRAMEWORKS

Flash, DirectX, OpenGL, Java, Python, XNA with Visual Studio, Mobile Gaming for the Android, iOS, Game engines - Adventure Game Studio, DX Studio, Unity

UNIT 5: GAME DEVELOPMENT

Developing 2D and 3D interactive games using OpenGL, DirectX – Isometric and Tile Based Games, Puzzle games, Single Player games, Multi Player games.

UNIT 1: MULTIMEDIA SYSTEMS DESIGN

An Introduction – Multimedia applications – Multimedia System Architecture – Evolving technologies for Multimedia – objects used in Multimedia systems – Multimedia Data interface standards – Multimedia Databases

UNIT 2: MULTIMEDIA FILE HANDLING

Compression & Decompression Algorithms– Data & File Format standards – Multimedia I/O technologies - Digital voice and audio – video image and animation – Full motion video – Storage and retrieval Technologies.

UNIT 3: HYPERMEDIA

Multimedia Authoring & User Interface - Multimedia Messaging - Hypermedia messaging -

Hypermedia message component – creating Hypermedia message – Integrated multimedia message standards – Integrated Document management – Distributed Multimedia Systems.

UNIT 4: OUTPUT PRIMITIVES

Introduction - Line - Curve and Ellipse Algorithms – Attributes –Two-Dimensional Geometric Transformations – Two-Dimensional Viewing.

UNIT V : THREE-DIMENSIONAL CONCEPTS

Three-Dimensional Object Representations – Three-Dimensional Geometric and Modeling Transformations – Three-Dimensional Viewing – Color models – Animation

TEXT BOOKS

- 1. Prabat K Andleigh and Kiran Thakrar, "Multimedia Systems and Design", PHI, 2013.
- 2. Donald Hearn and M.Pauline Baker, "Computer Graphics C Version", Pearson Education, 2009.

REFERENCES

- 1. Judith Jeffcoate, Multimedia in practice technology and Applications, PHI, 2007.
- 2. Foley, Vandam, Feiner, Huges, 'Computer Graphics: Principles & Practice', Pearson Education, second edition 2003.

PRACTICAL EXPERIMENTS

- 1. To implement Bresenham's algorithms for line, circle and ellipse drawing
- 2. To perform 2D Transformations such as translation, rotation, scaling, reflection and sharing.
- 3. To implement Cohen-Sutherland 2D clipping and window-view port mapping
- 4. To perform 3D Transformations such as translation, rotation and scaling.
- 5. To visualize projections of 3D images.
- 6. To convert between color models.
- 7. To implement RLE compression algorithm
- 8. To implement image compression algorithm
- 9. To perform animation using any Animation software.
- 10. To perform basic operations on image using any image editing software

UNTI 1: INTRODUCTION TO C#

Introducing C#, Understanding .NET, overview of C#, Literals, Variables, Data Types, Operators, checked and unchecked operators, Expressions, Branching, Looping, Methods, implicit and explicit casting, Constant, Arrays, Array Class, Array List, String, String Builder, Structure, Enumerations, boxing and unboxing.

UNIT 2: OBJECT ORIENTED ASPECTS OF C#

Class, Objects, Constructors and its types, inheritance, properties, indexers, index overloading, polymorphism, sealed class and methods, interface, abstract class, abstract and interface, operator overloading, delegates, events, errors and exception, Threading.

UNIT 3: APPLICATION DEVELOPMENT ON .NET

Building windows application, Creating our own window forms with events and controls, menu creation, inheriting window forms, SDI and MDI application, Dialog Box(Modal and Modeless), accessing data with ADO.NET, DataSet, typed dataset, Data Adapter, updating database using stored procedures, SQL Server with ADO.NET, handling exceptions, validating controls, windows application configuration.

UNIT 4: WEB BASED APPLICATION DEVELOPMENT ON .NET

Programming web application with web forms, ASP.NET introduction, working with XML and .NET, Creating Virtual Directory and Web Application, session management techniques, web.config, web services, passing datasets, returning datasets from web services, handling transaction, handling exceptions, returning exceptions from SQL Server.

UNIT 5: CLR AND .NET FRAMEWORK

Assemblies, Versoning, Attributes, reflection, viewing meta data, type discovery, reflection on type, marshalling, remoting, security in .NET

TEXT BOOKS:

- 1. Herbert Schildt, "The Complete Reference: C# 4.0", 4th Edition Tata McGraw Hill, 2012.
- 2. Christian Nagel et al. "Professional C# 2012 with .NET 4.5", Wiley India, 2012.

REFERENCES:

- 2. Ian Griffiths, Matthew Adams, Jesse Liberty, "Programming C# 4.0", Sixth Edition, O"Reilly, 2010.

PRACTICAL COMPONENTS

- 1. To write a C# program using Branching and Looping statements
- 2. To write a C# program using Arrays and Strings methods.
- 3. To write a C# program using Structures and enumerations
- 4. To write a C# program using inheritance concepts.
- 5. To write a C# program using Polymorphism.
- 6. To write a C# program using interfaces.

- 7. To write a C# program by using operator overloading
- 8. To write a C# program using delegates, events, errors and exceptions.
- 9. To write a C# program using Errors and Exceptions.
- 10. To build a calculator widget in windows application using C#.

UNIT 1: PARALLEL AND DISTRIBUTED DATABASES

Inter and Intra Query Parallelism – Architecture – Query evaluation – Optimization – Distributed Architecture – Storage – Catalog Management – Query Processing – Transactions – Recovery – Large-scale Data Analytics in the Internet Context – Map Reduce Paradigm – runtime system for supporting scalable and fault-tolerant execution – paradigms: Pig Latin and Hive and parallel databases versus Map Reduce. Practical: DDL, DML, TCL commands

UNIT 2: ACTIVE DATABASES

Syntax and Sematics (Starburst, Oracle, DB2) – Taxonomy – Applications – Integrity Management – Workflow Management – Business Rules – Design Principles – Properties – Rule Modularization – Rule Debugging – IDEA methodology – Open Problems. Practical: DB2 AULibrary.com

UNIT 3: TEMPORAL AND OBJECT DATABASES

Overview – Data types – Associating Facts – Temporal Query Language – TSQL2 – Time Ontology – Language Constructs – Architecture – Temporal Support – Object Database and Change Management – Change of Schema – Implementing Database Updates in O2 – Benchmark Database Updates – Performance Evaluation. Practical: SQL

UNIT 4: COMPLEX QUERIES AND REASONING

Logic of Query Languages – Relational Calculi – Recursive rules – Syntax and semantics of Data log – Fix point semantics – Implementation Rules and Recursion – Rule rewriting methods – Compilation and Optimization – Recursive Queries in SQL – Open issues. Practical: SQL

UNIT 5: SPATIAL, TEXT AND MULTIMEDIA DATABASES

Traditional Indexing Methods (Secondary Keys, Spatial Access Methods) – Text Retrieval – Multimedia Indexing – 1D Time Series – 2d Color images – Sub pattern Matching – Open Issues – Uncertainties. Practical: SQL Programs

UNIT 1: INTRODUCTION TO STORAGE TECHNOLOGY

Review data creation and the amount of data being created and understand the value of data to a business - challenges in data storage and data management - Solutions available or data storage - Core elements of a data center infrastructure - role of each element in supporting business activities.

UNIT 2: STORAGE SYSTEMS ARCHITECTURE

Hardware and software components of the host environment - Key protocols and concepts used by each component - Physical and logical components of a connectivity environment Major physical disk - access characteristics - and performance implications - Concept of RAID and its components - Different Raid levels and their suitability for different application environments: RAID 0 RAID 1, RAID 3, RAID 4, RAID 5, RAID 0+1, RAID 1+0, RAID 6 - Compare and contrast integrated and modular storage systems - High-level architecture and working of an intelligent storage system.

UNIT 3: INTRODUCTION TO NETWORKED STORAGE

Evolution of networked storage – Architecture – Components - and topologies of FC-SAN, NAS, and IP-SA Benefits of the different networked storage options -Understand the need for long-term archiving solutions and describe how CAS fulfills the need - Understand the

appropriateness of the different networked storage options for different application environments.

UNIT 4: INFORMATION AVAILABILITY & MONITORING & MANAGING DATA CENTER

List reasons for planned/unplanned outages and the impact of downtime - impact of downtime - Differentiate between business continuity (BC) and disaster recovery (DR) - RTO and RPO - Identify single points of failure in a storage infrastructure and list solutions to mitigate these failures - Architecture of backup/recovery and the different backup/recovery topologies - replication technologies and their role in ensuring information availability and business continuity - Remote replication technologies and their role in providing disaster recovery and business continuity capabilities - Identify key areas to monitor in a data center - Industry standards for data center monitoring and management - key metrics to monitor for different components in a storage infrastructure - key management tasks in a data center.

UNIT 5: SECURING STORAGE AND STORAGE VIRTUALIZATION

Information security - Critical security attributes for information systems - Storage security domains - List and analyzes the common threats in each domain - Virtualization technologies - block-level and file-level virtualization technologies and Processes

UNIT 1: INTRODUCTION TO BIG DATA

Introduction to Big Data Platform – Challenges of conventional systems - Web data – Evolution of Analytic scalability, analytic processes and tools, Analysis vs reporting - Modern data analytic tools, Stastical concepts: Sampling distributions, resampling, statistical inference, prediction error. Practical: Hadoop Map Reduce job flow

UNIT 2: DATA ANALYSIS

Regression modeling, Multivariate analysis, Bayesian modeling, inference and Bayesian networks, Support vector and kernel methods, Analysis of time series: linear systems analysis, nonlinear dynamics - Rule induction - Neural networks: learning and generalization, competitive learning, principal component analysis and neural networks; Fuzzy logic: extracting fuzzy models from data, fuzzy decision trees, Stochastic search methods. Practical: Creating and customizing applications to analyze data

UNIT 3: MINING DATA STREAMS

Introduction to Streams Concepts – Stream data model and architecture - Stream Computing, Sampling data in a stream – Filtering streams – Counting distinct elements in a stream – Estimating moments – Counting oneness in a window – Decaying window - Realtime Analytics Platform(RTAP) applications - case studies - real time sentiment analysis, stock market predictions. Practical: Implementing a targeted Big Data strategy

UNIT 4: FREQUENT ITEMSETS AND CLUSTERING

Mining Frequent itemsets - Market based model – Apriori Algorithm – Handling large data sets in Main memory – Limited Pass algorithm – Counting frequent itemsets in a stream – Clustering Techniques – Hierarchical – K- Means – Clustering high dimensional data – CLIQUE and PROCLUS – Frequent pattern based clustering methods – Clustering in non-euclidean space – Clustering for streams and Parallelism. Practical: Apply different classification techniques to classify the given data set

UNIT 5: FRAMEWORKS AND VISUALIZATION

MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases - S3 - Hadoop Distributed file systems – Visualizations - Visual data analysis techniques, interaction techniques; Systems and applications. Practical: Apply various association rule mining algorithms

UNIT 2: SQA COMPONENTS AND PROJECT LIFE CYCLE

Software Development methodologies – Quality assurance activities in the development process-Verification & Validation – Reviews – Software Testing – Software Testing implementations – Quality of software maintenance – Pre-Maintenance of software quality components – Quality assurance tools – CASE tools for software quality – Software maintenance quality – Project Management.

UNIT3:SOFTWAREQUALITYINFRASTRUCTURE

Procedures and work instructions - Templates - Checklists – 3S development - Staff training and certification Corrective and preventive actions – Configuration management – Software change control – Configuration management audit -Documentation control – Storage and retrieval.

UNIT 4: SOFTWARE QUALITY MANAGEMENT & METRICS

Project process control – Computerized tools - Software quality metrics – Objectives of quality measurement – Process metrics – Product metrics – Implementation – Limitations of software metrics – Cost of software quality – Classical quality cost model – Extended model – Application of Cost model.

UNIT 5: STANDARDS, CERTIFICATIONS & ASSESSMENTS

Quality manangement standards – ISO 9001 and ISO 9000-3 – capability Maturity Models – CMM and CMMI assessment methodologies - Bootstrap methodology – SPICE Project – SQA project process standards – IEEE 1012 & 1028 – Organization of Quality Assurance – Department management responsibilities – Project management responsibilities – SQA units and other actors in SQA systems.

UNIT 1: INTRODUCTION

Preliminary Considerations – Cost of Development – Importance of Mobile Strategies in Business World – Mobile Web Presence – Mobile Applications – Marketing – Web Services for Mobile Devices – Creating Example Web Service _ Debugging Web Service

UNIT 2: MOBILE USER INTERFACE DESIGN

Effective Use of Screen Real Estate – Understanding Mobile Application Users – Understanding Mobile Information Design – Understanding Mobile Platforms – Using the Tools for Mobile Interface Design – Choosing a Mobile Web Option – Adaptive Mobile Website – Mobile Web Applications with HTML 5

UNIT 3: ANDROID APPLICATION DEVELOPMENT

Getting to know the Android User Interfaces – Designing Your User interface using Views – Displaying Pictures and Menus with Views – Using Image views to Display pictures – Using menus with views – Data Persistence – Saving and loading user performances - Persisting data to files – Creating and using Data bases – Content Providers.

UNIT 4 : ANDROID MESSAGING, NETWORKING, LOCATION BASED SERVICES

SMS Messaging, Sending E-mail – Networking – Downloading Binary Data, Text Files-Accessing Web Services – Performing Asynchronous Calls – Location Based Services – Displaying Maps – Getting Location Data – Creating your own services – Communicating between a service and an activity – Binding activities to Services

UNIT 5: IOS AND WINDOWS PHONE

Getting started with iOS – iOS Project – Debugging iOS Apps – Objective C Basics – Hello Word App – Building the derby app in iOS – Windows Phone 7 Project – Building Derby App in Windows Phone 7.

CO5 Course Topic(s)

UNIT 1: INTRODUCTION

ERP: An Overview, Enterprise – An Overview, Benefits of ERP- ERP and Related Technologies- Business Process Reengineering (BPR)- Data Warehousing- Data Mining - OLAP - SCM

Η

UNIT 2: ERP IMPLEMENTATION

Μ

Η

ERP Implementation Lifecycle - Implementation Methodology - Hidden Costs - Organizing the Implementation – Vendors - Consultants and Users - Contracts with Vendors - Consultants and Employees - Project Management and Monitoring

UNIT 3: THE BUSINESS MODULES

Business modules in an ERP Package - Finance – Manufacturing (Production) - Human Resources - Plant Maintenance - Materials Management - Quality Management - Sales and Distribution

UNIT 4: THE ERP MARKET

ERP Market Place and Marketplace Dynamics - SAP AG - People soft – Baan - JD Edwards-Oracle corporation – QAD – SSA Global - Lawson software

UNIT 5: ERP – PRESENT AND FUTURE

Turbo Charge the ERP System – EIA - ERP and E-Business - ERP, Internet and WWW- ERP II - Future Directions and Trends in ERP

Analysis and Design with REST - Mainstream SOA Methodology - Analysis and Service-Oriented Design with REST - Service-Oriented Design with REST HTML - Cookies - Simple PHP scripts

UNIT 3 : SERVICE COMPOSITION

Service Composition with REST - Fundamental Service Composition with REST - Advanced Service Composition with REST - Service Composition with REST Case Study - Design Patterns for SOA with REST - Service Versioning with REST - Uniform Contract Profiles

UNIT 4: RESTFUL SERVICES AND THE RESOURCE-ORIENTEDARCHITECTURE Introducing the Simple Storage Service - Object-Oriented Design of S3 - URIs - Addressability - Statelessness - Representations - Links and Connectedness - The Uniform Interface - Resource Design - Turning Requirements into Read-Only Resources - Service Implementation - Web service case studies - Connect Resources to Each Other - Controller Code - Model Code

UNIT 5 : SOA TRANSACTION AND SECURITY

SOA and performance - SOA and security – Service Management - Model driven service deployment – Establishing SOA and SOA governance

UNIT 1: INTRODUCTION

Mobile Computing – Mobile Computing Vs wireless Networking – Mobile Computing Applications – Characteristics of Mobile computing – Structure of Mobile Computing Application. MAC Protocols – Wireless MAC Issues – Fixed Assignment Schemes – Random Assignment Schemes – Reservation Based Schemes. Practical: MAC Protocols

UNIT 2: MOBILE INTERNET PROTOCOL AND TRANSPORT LAYER

Overview of Mobile IP – Features of Mobile IP – Key Mechanism in Mobile IP – route Optimization. Overview of TCP/IP – Architecture of TCP/IP- Adaptation of TCP Window – Improvement in TCP Performance. Practical: Key Distribution mechanisms

UNIT 3: MOBILE TELECOMMUNICATION SYSTEM

Global System for Mobile Communication (GSM) – General Packet Radio Service (GPRS) – Universal Mobile Telecommunication System (UMTS). Practical: GSM Technique

UNIT 4: MOBILE AD-HOC NETWORKS

Ad-Hoc Basic Concepts – Characteristics – Applications – Design Issues – Routing – Essential of Traditional Routing Protocols –Popular Routing Protocols – Vehicular Ad Hoc networks (VANET) – MANET Vs VANET – Security. Practical: Routing Protocols

UNIT 5: MOBILE PLATFORMS AND APPLICATIONS

Mobile Device Operating Systems – Special Constrains & Requirements – Commercial Mobile Operating Systems – Software Development Kit: iOS, Android, BlackBerry, Windows Phone – M-Commerce – Structure – Pros & Cons – Mobile Payment System – Security Issues. Practical: Security Mechnisms

UNIT 1: INFORMATION ENTROPY FUNDAMENTALS

Uncertainty- Information and Entropy – Source coding Theorem – Huffman coding –Shannon Fano coding – Discrete Memory less channels – channel capacity – channel coding Theorem – Channel capacity Theorem.

UNIT 2: DATA AND VOICE CODING

Differential Pulse code Modulation – Adaptive Differential Pulse Code Modulation – Adaptive sub band coding – Delta Modulation – Adaptive Delta Modulation – Coding of speech signal at low bit rates (Vocoder, LPC).

UNIT 3: ERROR CONTROL CODING

Linear Block codes – Syndrome Decoding – Minimum distance consideration – cyclic codes – Generator Polynomial – Parity check polynomial – Encoder for cyclic codes – calculation of syndrome – Convolutional codes.

UNIT 4: COMPRESSION TECHNIQUES

Principles – Text compression – Static Huffman Coding – Dynamic Huffman coding – Arithmetic coding – Image Compression – Graphics Interchange format – Tagged Image File Format – Digitized documents – Introduction to JPEG standards.

UNIT 5: AUDIO AND VIDEO CODING

Linear Predictive coding – code excited LPC – Perceptual coding, MPEG audio coders – Dolby audio coders – Video compression – Principles – Introduction to H.261 & MPEG Video standards.

| UNIT 1: BA | ASIC (| CONC | EPTS | | | | | | | | | | |

Components-networks-Topologies-Protocols and Standards –ISO/OSI model-Origin- blue tooth SIG - Protocol stack - Security applications and profiles – management - test and qualification technology basics - RF and IR wireless communication.

UNIT 2: BLUETOOTH MODULE

Antennas patterns - gain and losses- types of antennas- on chip antennas radio interference - FH, modulation, symbol timing, power emission and control, performance parameters - RF architecture - Blur RF - Base band - Blue tooth device address system timing - Physical links - packet structuring types and construction - channel coding and time base synchronization.

UNIT 3: LINK CONTROLLER AND MANAGEMENT

LCP- controller states - Pico net and scattered operations - Master / slave role switching LC Architectural overview – LMC - Link set up - Quality of service - LMP version - Name represent - Test mode.

UNIT 4: BLUETOOTH HOST

LLC and adaptation protocol L2 cap signaling – connections- Blue tooth profiles- Version 1.0-Generic profiles-serial and object exchange.

UNIT 5: SECURITY

Encryption and security Key generation - security Modes and architecture - Low power operation and QOS management.

| Course Topic(s) | | | | | | | | | | | | |
| UNIT 1: INTRODUCTION AND OVERVIEW OF WIRELESS SENSOR NETWORKS | | | | | | | | | | | ORKS | |
| Introduction - Basic overview of the technology - Range of applications - Examples of category 1 and 2 WSN application - Sensor node technology - Sensor taxonomy - WN node operating | | | | | | | | | | | | |

environment – WN Trends - Wireless Transmission Technology and Systems – Applications of Wireless Sensor Network

UNIT 2: POWER MANAGEMENT AND ROUTING IN WSN

Distributed Power – Aware micro sensor networks - Dynamic voltage scaling techniques – Operating system for energy Scalable in WSN - Dynamic power management -Energy aware routing - Altruists or Friendly neighbors in the Pico radio sensor network - Aggregate queries -Bluetooth in the distributed sensor network - Mobile networking for smart dust

UNIT 3: CLUSTERING AND SECURITY PROTOCOLS IN WSN

Topology discovery and clusters in sensor networks - Adaptive clustering with deterministic Cluster – Head selection -Sensor cluster's performance - Power – aware functions -Efficient flooding with passive Clustering -Security protocols in sensor networks - Communication security

UNIT 4: NETWORK MANAGEMENT AND OPERATING SYSTEM

Network management requirements - Traditional network management models - Network management design issues – MANNA - other issues related to network management - Operating system design issues – TinyOS – Mate – MagnetOS – MANTIS – OSPM - EYES OS – SenOS – EMERALDS – PicsOS - WSN design issues -Performance modeling - Case study: Simple computation of the System Life Span. WSN Network architecture: typical network architectures-data relaying and aggregation strategies

UNIT 5: TOPOLOGY CONTROL

Issues in WSN routing – OLSR- Localization – Indoor and Sensor Network Localizationabsolute and relative localization, triangulation-QOS in WSN.Topology Control - Distributed Topology Control- Design Guidelines -Ideal Features of a Topology Control Protocol .The Quality of Information - Logical and Physical Node Degrees ; Location-based Topology Control, Localization- Absolute and relative localization. Neighbor-based Topology Control -The Number of Neighbors for Connectivity - The KNeigh Protocol - The XTC Protocol; Dealing with Node Mobility

Unit 1 : Image Processing Fundamentals

Advantages, Applications, Limitations of DIP; Components of an image processing system, Digital image representation, light, hue, saturation and intensity, grey scale and colour images, colour models; Basic relationship between pixels, image sampling and quantization

Unit 2: Image Transforms, Image Restoration

Two dimensional orthogonal transforms - DFT, FFT, Walsh, Slant, Hadamard, Haar transform, KLT, DCT, wavelets; Image degradation: Spatial domain, frequency domain; Degradation model for continuous function, continuous impulse function, restoration approaches: unconstrained restoration, constrained restoration, Lagrange multiplier, minimum mean square error filtering, constrained least square filtering, inverse filtering, removal of blur caused by uniform linear motion, Wiener filter, Geometric mean filter, Geometrical transformations

Unit 3: Image Enhancement

Image enhancement in the Spatial Domain, background, basic grey level transformations, histogram processing, enhancement using arithmetic/logic operations, basic of spatial filtering, smoothing spatial filters, sharpening spatial filters, combining spatial enhancement methods, image enhancement in the frequency domain -background, introduction to Fourier transform and frequency domain, smoothing frequency domain filters, sharpening frequency domain filters, homomorphic filters, implementation

Unit 4 : Image Segmentation

Detection of discontinuities, edge linking and boundary detection, threshold, region-based segmentation, segmentation by morphological watersheds, use of motion in segmentation

Unit 5: Image Representation

Image representation, Boundary representation using chain codes, Polygonal approximation, signatures, skeleton, patters, recognition based on decision theoretic methods **Text Book(s):**

UNIT 3: PROGRAMMING LANGUAGES AND TOOLS

Desired language characteristics based on ADA – Data typs – Control Structures – Packages – Exception Handling – Overloading – Multitasking – Timing specification – Task Scheduling – Just-intime Compilation – Runtime support.

UNIT 4: REAL TIME DATA BASES

Basic networking principles – Real time databases –Real time Vs general purpose data base-Transaction processing – Concurrency control – Disk scheduling algorithms – Serialization and Consistency-Data base for hard real time systems.

UNIT 5: FAULT TOLERANCE, RELIABILITY AND SYNCHRONIZATION

Fault types – Fault detection and containment – Redundancy – Data diversity – Reversal checks – Obtaining parameter values – Reliability models for hardware redundancy – Software error models – Clocks – Fault tolerant synchronization – Synchronization in software.

UNIT 1: FUNDAMENTALS OF IOT

Introduction-Characteristics - Physical design - Protocols-Logical design - Enabling technologies - IoT levels-Domain specific IoTs - IoT vs M2M

UNIT 2: IOT DESIGN METHODOLOGY

IoT systems management - IoT design methodology-Specifications - Integration and Application Development

UNIT 3: IOT COMPONENTS

Sensors and activators - Communication modules - Zigbee-RFID-Wi-Fi-Power sources.

UNIT 4: BUILDING IOT WITH HARDWARE PLATFORMS

Platform - Arduino/Intel Galileo/Raspberry Pi- Physical device - Interfaces - Programming - APIs/Packages - Web services.

UNIT 5: CASE STUDIES AND ADVANCED TOPICS

Various Real time applications of IoT-Connecting IoT to cloud-Cloud storage for IoT-Data Analytics for IoT- Software & Management Tools for IoT.

UNIT 1: INTRODUCTION

Overview of Design process - Process Components, System description, Service Description, Service, Performance Characteristics, Network Supportability. Requirement Analysis – User requirement, Application requirement, Device requirement, Network requirement.

UNIT 2: DESIGN CONCEPTS

Design Concepts – Objectives, process, Service provider Evaluation, Network Layout, Trace Traceability, Design Metrics.

UNIT 3: SECURITY PROBLEM AND CRYPTOGRAPHY

Security attacks – services – and mechanism – Conventional encryption model – Steganography – classical encryption techniques – simplified DES – block Cipher principles – The DES standards – Principles of Public key cryptosystems – RSA algorithm – Key management – Hellman key exchange – Authentication requirements and functions – Authentication codes Hash functions Kerberos. Practical: DES, RSA, Hellman algorithms

UNIT 4: NETWORK SECURITY

Transport level Security- Web Security, SSL, TLS, HTTPS, SSH- Wireless network security-E Mail security-PGP, S/ MIME, DKIM, IP Security, Intrusion detection – password management. Malicious software– Viruses and related Threats – Virus Counter measures, worms, DDoS attacks– Firewall Design Principles – Trusted Systems. Practical: PGP, S/ MIME, DKIM

UNIT 5: NETWORK MANAGEMENT

Network management – requirements and systems – Network monitoring architecture – Performance monitoring – Fault monitoring – Account monitoring – Configuration control – Security control – SNMP background and concepts – structure of management information – SNMP protocol – Basic concepts – specifications – Transport level support Groups. Practical: Network Monitoring

UNIT 1: SECURITY - AN OVERVIEW

Basics of Security - CIA Triad - Threats, Attacks and Controls - Security Models- Bell-LaPadula model - Biba Integrity model - Chinese Wall model - Malicious Logic - Viruses, Worms, Logic Bombs - Basics of Cryptography - Mathematics for Cryptography - Modulo Arithmetic -Euclidean and extended Euclidean Theorem - Chinese Remainder Theorem - Euler and Fermat theorem - Classical Cryptosystems - Substitution and Transposition.

UNIT 2: ADVANCED CRYPTOGRAPHY

DES and AES - Public Key Cryptography - RSA and ElGamal algorithms - Authentication and Key Exchange - Biometric authentication - Diffie Hellman and Needem Schroeder algorithms -Elliptic Curve Cryptosystems - Digital Signatures - Message Digest - Certificates - Directories and Revocation of keys and certificates.

UNIT 3: SECURITY STANDARDS

Public Key Infrastructure - Kerberos - X.509 - IPSec - Virtual Private Networks - E-Mail Security - PGP and PEM - Web Security - Secured DNS - SSL, TLS and SET - CoBIT Framework - Compliances - Credit Card Applications - GLBA.

UNIT 4: SECURITY PRACTICES

Vulnerability Analysis - Flaw Hypothesis Methodology, NRL taxonomy and Aslam's model -

Auditing - Anatomy of an Auditing System - Design of Auditing Systems - Posteriori Design - Auditing mechanisms - Risk Analysis and Management - Disaster Recovery Planning/Incident Response Planning.

UNIT 5: SECURE DEVELOPMENT

Secure Coding - OWASP/SANS Top Vulnerabilities - Buffer Overflows - Incomplete mediation - XSS - Anti Cross Site Scripting Libraries - Canonical Data Format - Command Injection - Redirection - Inference – Application Controls - Secured Software Development Life Cycle - Evaluation of Security Systems- Case Studies-Legal and Ethical Issues- Cybercrime and computer crime - Intellectual property-Copyright, patent, trade secret - Hacking and Intrusion privacy-Identity theft.

UNIT 1: MULTIPLE RADIO ACCESS

Medium Access Alternatives: Fixed-Assignment for Voice Oriented Networks Random Access for Data Oriented Networks, Handoff and Roaming Support, Security and Privacy.

UNIT 2: WIRELESS BROADBAND NETWORKS TECHNOLOGY & PLATFORMS

Wireless broadband fundamentals and Fixed Wireless Broadband Systems - Platforms-Enhanced Copper- Fibre Optic and HFC - 3G Cellular- Satellites - ATM and Relay Technologies **UNIT 3: AD HOC NETWORKS**

Characteristics and Applications of Ad hoc Networks - Routing – Need for routing and routing classifications - Table Driven Routing Protocols - Source Initiated On-Demand Routing Protocols - Hybrid Protocols – Zone Routing - Fisheye Routing - LANMAR for MANET with group mobility - Location Added Routing, Distance Routing Effects - Micro discovery and Power Aware Routing. Practical : Routing Protocols

UNIT 4: SENSOR NETWORKS

Wireless Sensor Networks - DARPA Efforts –Classification - Fundamentals of MAC - Flat routing – Directed Diffusion-SPIN - COGUR - Hierarchical Routing - Cluster base routing -Scalable Coordination – LEACH – TEEN - APTEEN and Adapting to the dynamic nature of Wireless Sensor Networks. Practical : MAC protocols

UNIT 5: ADVANCED WIRELESS NETWORKS

Wireless. Broadband Network Applications - Teleservices Model and Adaptive QoS Parameters - Modelling of Wireless - Broadband Applications – Multi component Model - Residential High speed Internet Wireless Broadband Satellite Systems - Next Generation Wireless Broadband Networks – 3G, Harmonized 3G, 3G CDMA, Smart Phones and 3G Evolution. Practical :Multi component models

UNIT 1: MOBILE INTERNET

Introduction, Mobile Data – connectivity – Key services for mobile internet – Mobile Internet access and application service provides - Content providers and Developer.

UNIT 2: MOBILE INTERNET STANDARD

Μ

Η

Current Web technologies for wireless application - origin and overview of WAP components of wap standard - Network Infrastructure services supporting Wap clients Design Principles Tools and software editors and emulators.

UNIT 3: IMPLEMENTING WAP SERVICES

WML Basic and Document model - content generation - Binary WML - enhanced WML - WML script - rules of script standard libraries - user interface design guidelines.

UNIT 4: ADVANCED WAP

Tailoring content to client - Techniques using HTTP 1.1 - WAP Push - Push Access Protocol -Push Technology - MIME media types for push messages - Proxy gateway; Data base driven WAP - ASP and WAP - Object model - Activex data objects (ADO) - End-to-End WAP services - Security domains - linking WAP and internet.

UNIT 5: WIRELESS TELEPHONY APPLICATIONS

WTA architecture - client Framework - Server and security - Design considerations Application creation Toolbox - WTA enhancements – Technology - Bluetooth and voice XML - Telematics inter connectivity.

UNIT 4: INTEGRATED AND DIFFERENTIATED SERVICES

Integrated Services Architecture – Approach, Components, Services- Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ – Random Early Detection, Differentiated Services

UNIT 5: PROTOCOLS FOR QOS SUPPORT

RSVP – Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms – Multiprotocol Label Switching – Operations, Label Stacking, Protocol details – RTP – Protocol Architecture, Data Transfer Protocol, RTCP.

Principles and Modes of Operation - Evaluation criteria for AES – AES Cipher – Triple DES. Practical: DES

UNIT 2: PUBLIC KEY CRYPTOGRAPHY

Number Theory- Public Key Cryptography and RSA-Key Management - Diffie-Hellman key Exchange – Elliptic Curve Architecture and Cryptography - Confidentiality using Symmetric Encryption and Asymmetric Encryption. Practical: RSA, Diffie Hellman

UNIT 3: CRYPTOGRAPHIC AND DATA INTEGRITY ALGORITHMS

Applications of cryptographic hash functions- Simple Hash Functions- Requirements and security-Secured Hash Algorithm- Message Authentication requirements and functions – Message Authentication Codes – Security of MACs – HMAC- Digital Signatures – ElGamal Digital signature scheme- Schnorr Digital signature scheme - Digital Signature Standard. Practical: Secured Hash Algorithm

UNIT 4: NETWORK AND INTERNET SECURITY

Transport level Security- Web Security, SSL, TLS, HTTPS, SSH- Wireless network security-E Mail security-PGP, S/ MIME, DKIM, IP Security. Practical: PGP

UNIT 5: SYSTEM LEVEL SECURITY

Intrusion detection – password management. Malicious software– Viruses and related Threats – Virus Counter measures , worms, DDoS attacks– Firewall Design Principles – Trusted Systems. Practical: password management

UNIT 1: INTRODUCTION

Characterization of Distributed Systems- Examples of distributed systems - Challenges-System Models-Physical models-Architectural models - Fundamental models - Introduction to interprocess communications-External data representation and marshalling- Multicast communication-Network virtualization -Overlay networks – Practical : MPI and World Wide Web, Remote Method Invocation program

UNIT 2: DISTRIBUTED OBJECTS AND FILE SYSTEM

Introduction - Distributed objects - From objects to components- Case studies: Enterprise JavaBeans and Fractal - Introduction to DFS - File service architecture - Sun network file system - The Andrew File System- Introduction to Name Services- Name services and DNS - Directory and directory services Practical : The Global Name Service, The X.500 Directory Service.

UNIT 3: DISTRIBUTED OPERATING SYSTEM SUPPORT

The operating system layer – Protection - Process and threads - Communication and invocation - Operating system architecture - Virtualization at the operating system level - Introduction to time and global states - Clocks, Events and Process states - Synchronizing physical clocks - Logical time and logical Clocks - Global states - Distributed debugging. Practical : CORBA using Java program, Java deadlock program

UNIT 4: TRANSACTION AND CONCURRENCY CONTROL – DISTRIBUTED TRANSACTIONS

Transactions – Nested transaction – Locks - Optimistic concurrency control - Timestamp ordering -Comparison of methods for concurrency control - Introduction to distributed transactions - Flat and nested distributed transactions - Atomic commit protocols - Concurrency control in distributed transactions - Distributed deadlocks - Transaction recovery. Practical: Concurrency control using DBMS

UNIT 5: DISTRIBUTED SYSTEM DESIGN AND DISTRIBUTED MULTIMEDIA

SYSTEMS

Introducing the case study: Google- Overall architecture and design philosophy- Underlying communication paradigms- Data storage and coordination services- Distributed computation services- Introduction to distributed multimedia systems- Characteristics of multimedia data - Quality of service management - Resource management- Stream adaptation- Practical : Tiger, BitTorrent and End System Multicast.

UNIT 1: AUTOMATA

Introduction to formal proof – Additional Forms of Proof – Inductive Proofs –Finite Automata (FA) – Deterministic Finite Automata (DFA) – Non-deterministic Finite Automata (NFA) – Finite Automata with Epsilon Transitions.

UNIT 2: REGULAR EXPRESSIONS AND LANGUAGES

Regular Expression –Finite Automata and Regular Expressions – Properties of Regular languages: Pumping Lemma for Regular Languages and Applications – Closure Properties of Regular Languages- Equivalence and Minimization of Automata

UNIT 3: CONTEXT-FREE GRAMMAR AND PUSH DOWN AUTOMATA

Context-Free Grammar (CFG) – Application- Parse Trees – Ambiguity in Grammars and Languages – Pushdown Automata – Languages of a Pushdown Automata – Equivalence of Pushdown Automata and CFG - Deterministic Pushdown Automata

UNIT 4: PROPERTIES OF CFL AND TURING MACHINE

Normal Forms for CFG – Pumping Lemma for CFL –Applications Properties of CFL –Turing Machines – Programming Techniques for TM: Multiple Stacks, Subroutines-Extensions to the Basic Turing Machine

UNIT 5: UNDECIDABILITY

A language that is not Recursively Enumerable (RE) – An Undecidable problem that is RE – Undecidable Problems about Turing Machine – Post_s Correspondence Problem - The classes P and NP - NP complete-Complements of Languages in NP

PRACTICE COMPONENTS

. Create the Deterministic Finite Automata using JFLAP simulator

2. Create the Non-Deterministic Finite Automata using JFLAP simulator

3. Construct a regular expression using JFLAP. Use Convert \rightarrow Convert FA to RE.

4. Construct a Grammar using JFLAP.

5. Convert regular expressions to FA

6. Create Regular Grammar and convert to Finite Automaton

7.Create a PDA that accepts strings that contains the language $L = \{axcb2x \mid where x \ge 0\}$ using the alphabet $\Sigma = \{a,b,c\}$.

8. Create each PDA with at least five test results with the following languages over alphabet: $\Box = \{a,b\}$

a) $L = \{anbn \mid where n > 0\}$

b) $L = \{anbncn \mid where n > 0\}$

9. Construct PDA for any given grammar.

Course Topic(s) UNIT 1:ION

Inroduction - Need for Green Computing – Green computing Background – Understanding the World of Green IT: Win-Win-Winning with Green IT – Making the Business Case of Green IT – Green Journeys in Action.

UNIT 2: GETTING A RUNNING START

Getting to know the Standards and Metrics – Assessing your current Energy use and

Needs – Go Green in 12 months: Putting Together a plan – Techniques for managing Power consumption

UNIT 3: GREENING THE DATA CENTER

Laying the foundation for green data management – maximizing data center efficiency – Bottom up Electrical Efficiency Improvement - Racking up green servers – cooling your data center – Building a Green Storage System – Grooming the Network for green – Using Virtualization – computer power using Benchmarking – Evaluation of Power Benchmarks

UNIT 4: GREENING THE OFFICE

Moving to Green Screens and Computing Machines – Reducing Desktop Energy Waste – Pursuing the Less-Paper Office – Evaluation Green Gadgetry – Experimental methodology

UNIT 5: GREENING THE ORGANIZATION

Greening the Facility – e-Waste Not, e-Want Not – Virtually There: Collobration Technologies for a Greener World - Ten Organizations that can help with Green IT objectives – Ten creative computer Recycling Tips – Ten tips for a Green Home Office.

UNIT 1: SOCIAL NETWORK ANALYSIS

Definition and Features - The Development of Social Network Analysis - Basic graph theoretical Concepts of Social Network Analysis – ties, density, path, length, distance, betweenness, centrality, clique - Electronic sources for network analysis - Electronic discussion networks, Blogs and online communities, Web-based networks.

UNIT 2: SOCIAL NETWORK PROFILES

Introduction – types of commercial social network profiles (CSNP) - Quantitative and Qualitative Analysis of CSNPs – Analysis of social networks extracted from log files - Data Mining Methods Related to SNA and Log Mining - Clustering Techniques – Case study.

UNIT 3: SEMANTIC TECHNOLOGY FOR SOCIAL NETWORK ANALYSIS

Introduction to ontology-based knowledge representation - - Ontology languages for the Semantic Web – RDF and OWL - Modeling Social network data - State-of-the-art in network data representation, Ontological representation of social individuals, Ontological representation of social relationships.

UNIT 4: SOCIAL NETWORK MINING

Detecting and discovering Communities in Social Networks - Definition of Community -Evaluating Communities - Methods for Community Detection – divisive, spectral and modularity optimization algorithms - Applications of Community Mining Algorithms - Overview of tools for Detecting Communities - Understanding and Predicting Human Behavior for Social Communities.

UNIT 5: VISUALIZATION AND APPLICATIONS OF SOCIAL NETWORKS

Visualization of Social Networks - Node-Edge Diagrams - Random Layout - Force-Directed Layout - Tree Layout - Matrix Representations - Hybrid Representations - Visualizing Online

UNIT 2: MODELING AND RETRIEVAL EVALUATION

IR models – Classic Information Retrieval – Alternative Set Theoretic Models – Alternative Algebraic Models – Alternative Probabilistic Models – Other Models – Hypertext Models – Web based Models – Retrieval Evaluation – Cranfield Paradigm – Retrieval Metrics – Reference Collections – User-based Evaluation – Relevance Feedback and Query Expansion – Explicit Relevance Feedback – Clicks – Implicit Feedback Through Local Analysis – Global Analysis – Documents: Languages & Properties – Queries: Languages & Properties.

UNIT 3: TEXT CLASSIFICATION, INDEXING AND SEARCHING

A Characterization of Text Classification – Unsupervised Algorithms – Supervised Algorithms – Feature Selection or Dimensionality Reduction – Evaluation metrics – Organizing the classes – Indexing and Searching – Inverted Indexes –Signature Files – Suffix Trees & Suffix Arrays – Sequential Searching – Multi-dimensional Indexing.

UNIT 4: WEB RETRIEVAL AND WEB CRAWLING

The Web – Search Engine Architectures – Search Engine Ranking – Managing Web Data – Search Engine User Interaction – Browsing – Applications of a Web Crawler – Taxonomy – Architecture and Implementation – Scheduling Algorithms – Evaluation - Structured Text Retrieval.

UNIT 5: TYPES OF IR AND APPLICATIONS

Parallel and Distributed IR –Data Partitioning – Parallel IR – Cluster-based IR – Distributed IR - Multimedia Information Retrieval – Challenges – Content Based Image Retrieval – Audio and Music Retrieval – Retrieving and Browsing Video – Fusion Models – Segmentation – Compression - Enterprise Search –Tasks – Architecture of Enterprise Search Systems – Enterprise Search Evaluation - Library Systems – Digital Libraries

UNIT 1: INTRODUCTION TO PARALLEL COMPUTING

Scope of Parallel Computing – Parallel Programming Platforms – Implicit Parallelism – Limitations of Memory System Performance – Control Structure of Parallel Platforms – Communication Model of Parallel Platforms – Physical Organization of Parallel Platforms – Communication Costs in Parallel Machines – Impact of Process - Processor Mapping and Mapping Techniques.

UNIT 2: PARALLEL ALGORITHM DESIGN

Preliminaries – Decomposition Techniques – Characteristics of Tasks and Interactions – Mapping Techniques for Load Balancing – Methods for Containing Interaction Overheads – Parallel Algorithm Models – Basic Communication Operations – One-to-All Broadcast and All-to-One Reduction – All-to-All Broadcast and Reduction – All-Reduce and Prefix Sum Operations – Scatter and Gather – All-to-All Personalized Communication- Circular Shift – Improving the Speed of some Communication Operations

UNIT 3: PROGRAMMING USING MESSAGE PASSING AND SHARED ADDRESS SPACE

Principles of Message Passing Programming – Building Blocks – Send and Receive Operations – MPI – Message Passing Interface – Topologies and Embedding – Overlapping Communication with Computation – Collective Communication and Computation Operations – Groups and Communicators – POSIX thread API – OpenMP: a Standard for Directive based Parallel Programming – Applications of Parallel Programming - Matrix-Matrix Multiplication – Solving Systems of Equations – Sorting Networks - Bubble Sort Variations – Parallel Depth First Search

UNIT 4: DISTRIBUTED COMPUTING PARADIGM

Paradigms for Distributed applications – Basic algorithms in Message passing Systems – Leader Election in Rings – Mutual Exclusion in Shared Memory

UNIT 5: FAULT TOLERANT DESIGN

Synchronous Systems with Crash Failures – Byzantine Failures – Impossibility in Asynchronous Systems - Formal Model for Simulation – Broadcast and Multicast –

Specification of a Broadcast Service – Implementing a Broadcast Service – Multicast in Groups – Distributed Shared Memory – Linearizable – Sequentially Consistent Shared Memory – Algorithms

UNIT 1 INTRODUCTION

Graphs – Introduction – Isomorphism – Sub graphs – Walks, Paths, Circuits –Connectedness – Components – Euler graphs – Hamiltonian paths and circuits – Trees – Properties of trees – Distance and centers in tree – Rooted and binary trees.

UNIT 2 TREES, CONNECTIVITY & PLANARITY

Spanning trees – Fundamental circuits – Spanning trees in a weighted graph – cut sets – Properties of cut set – All cut sets – Fundamental circuits and cut sets – Connectivity and separability – Network flows – 1-Isomorphism – 2-Isomorphism – Combinational and geometric graphs – Planer graphs – Different representation of a planer graph.

UNIT 3 MATRICES, COLOURING AND DIRECTED GRAPH

Chromatic number – Chromatic partitioning – Chromatic polynomial – Matching – Covering – Four color problem – Directed graphs – Types of directed graphs – Digraphs and binary relations – Directed paths and connectedness – Euler graphs.

UNIT 4 PERMUTATIONS & COMBINATIONS

Fundamental principles of counting - Permutations and combinations - Binomial theorem - combinations with repetition - Combinatorial numbers - Principle of inclusion and exclusion - Derangements - Arrangements with forbidden positions.

UNIT 5 GENERATING FUNCTIONS

Generating functions - Partitions of integers - Exponential generating function – Summation operator - Recurrence relations - First order and second order – Non-homogeneous recurrence relations - Method of generating functions

UNIT 1: INTRODUCTION

Need for Bioinformatics technologies – Overview of Bioinformatics technologies Structural bioinformatics – Data format and processing – Secondary resources and applications – Role of Structural bioinformatics - Biological Data Integration System.

UNIT 2: DATAWAREHOUSING AND DATAMINING IN BIOINFORMATICS

Bioinformatics data – Data warehousing architecture – data quality – Biomedical data analysis – DNA data analysis – Protein data analysis – Machine learning – Neural network architecture and applications in bioinformatics.

UNIT 3: MODELING FOR BIOINFORMATICS

Hidden markov modeling for biological data analysis – Sequence identification –Sequence classification – multiple alignment generation – Comparative modeling –Protein modeling – genomic modeling – Probabilistic modeling – Bayesian networks – Boolean networks - Molecular modeling – Computer programs for molecular modeling.

UNIT 4: PATTERN MATCHING AND VISUALIZATION

Gene regulation – motif recognition – motif detection – strategies for motif detection – Visualization – Fractal analysis – DNA walk models – one dimension – two dimension – higher dimension – Game representation of Biological sequences – DNA, Protein, Amino acid sequences.

UNIT 5: MICROARRAY ANALYSIS

Microarray technology for genome expression study – image analysis for data extraction – preprocessing – segmentation – gridding – spot extraction – normalization, filtering – cluster analysis – gene network analysis – Compared Evaluation of Scientific Data Management Systems – Cost Matrix – Evaluation model - Benchmark – Tradeoffs.

| Introduction · | - Hum | ans ar | nd Cor | nputers | s - Or | ganiza | tion of | f the I | - Brain | Biolog | gical Ne | uron - |

Biological and Artificial Neuron Models - Characteristics of ANN - Models of ANNs - McCulloch-Pitts Model - Feed forward & feedback networks - learning rules - Hebbian learning rule - perception learning rule - delta learning rule - Widrow-Hoff learning rule - correction learning rule - Winner – lake all learning rule - etc.

UNIT 2: FEED FORWARD NEURAL NETWORKS

Classification model - Features & Decision regions - training & classification using discrete perception - algorithm - single layer continuous perception networks for linearly separable classifications - linearly non- separable pattern classification - Delta learning rule for multiperception layer - Generalized delta learning rule -Back-propagation training - learning factors - Examples.

UNIT 3: ASSOCIATIVE MEMORIES

Paradigms of Associative Memory - Pattern Mathematics - Hebbian Learning - General Concepts of Associative Memory - Bidirectional Associative Memory (BAM) Architecture - BAM Training Algorithms - Storage and Recall Algorithm - BAM Energy Function - Hopfield networks - Basic Concepts - Training & Examples - SOM-UN supervised learning of clusters - winner-take-all learning - recall mode, Initialization of weights - seperability limitations del - Historical Developments - Potential Applications of ANN.

UNIT 4: CLASSICAL SETS

Introduction to classical sets – properties - Operations and relations -Fuzzy sets –Membership – Uncertainty – Operations – properties - fuzzy relations – cardinalities - membership functions -Overview of Classical Sets - Membership Function - a-cuts - Properties of a-cuts – Decomposition – Theorems - Extension Principle

UNIT 5:

UNCERTAINTY

BASED INFORMATION

Information & Uncertainty - Non specificity of Fuzzy & Crisp sets - Fuzziness of Fuzzy Sets – Fuzzification - Membership value assignment - development of rule base and decision making system - Defuzzification to crisp sets - Defuzzification methods - Neural network applications -Process identification – control - fault diagnosis - Fuzzy logic applications - Fuzzy logic control and Fuzzy classification.

UNIT 1: INTRODUCTION

Learning – Types of Machine Learning –Supervised Learning – The Brain and the Neuron– Design a Learning System –Perspectives and Issues in Machine Learning–Concept Learning Task –Concept Learning as Search –Finding a Maximally Specific Hypothesis –Version Spaces and the Candidate Elimination Algorithm –Linear Discriminants –Perceptron –Linear Separability –Linear Regression

UNIT 2: LINEAR MODELS

Multi-layer Perceptron – Going Forwards –Going Backwards: Back Propagation Error –Multilayer Perceptron in Practice –Examples of using the MLP –Overview –Deriving Back-Propagation –Radial Basis Functions and Splines –Concepts –RBF Network –Curse of Dimensionality–Interpolations and Basis Functions –Support Vector Machines

UNIT 3 : TREE AND PROBABILISTIC MODELS

Learning with Trees –Decision Trees –Constructing Decision Trees –Classification and Regression Trees –Ensemble Learning –Boosting –Bagging –Different ways to Combine Classifiers –Probability and Learning –Data into Probabilities –Basic Statistics –Gaussian Mixture Models –Nearest Neighbor Methods –Unsupervised Learning –K means Algorithms – Vector Quantization –Self Organizing Feature Map

UNIT 4: DIMENSIONALITY REDUCTION AND EVOLUTIONARY MODELS

Dimensionality Reduction –Linear Discriminant Analysis –Principal Component Analysis – Factor Analysis –Independent Component Analysis –Locally Linear Embedding –Isomap –Least Squares Optimization –Evolutionary Learning –Genetic algorithms –Genetic Offspring: -Genetic Operators –Using Genetic Algorithms –Reinforcement Learning –Overview –Getting Lost Example –Markov Decision Process

UNIT 5: GRAPHICAL MODELS

Markov Chain Monte Carlo Methods–Sampling –Proposal Distribution –Markov Chain Monte Carlo –Graphical Models –Bayesian Networks –Markov Random Fields –Hidden Markov Models –Tracking Methods

UNIT 1: NEURAL NETWORKS -I

(Introduction and Architecture) Neuron, Nerve Structure and Synapse, Artificial Neuron and its Model, Activation Functions, Neural Network Architecture: Single Layer and Multilayer Feed Forward Networks, Recurrent Networks. Various Learning Techniques; Perception and Convergence Rule, Auto-Associative and Hetro-Associative Memory.

UNIT 2: NEURAL NETWORKS -II

(Back Propagation Networks) Architecture: Perceptron Model, Solution, Single Layer Artificial Neural Network, Multilayer Perception Model; Back Propagation Learning Methods, Effect of Learning Rule Co-Efficient ;Back Propagation Algorithm, Factors Affecting Back Propagation Training, Applications.

UNIT 3: FUZZY LOGIC -I

(Introduction) Basic Concepts of Fuzzy Logic, Fuzzy Sets and Crisp Sets, Fuzzy Set Theory and Operations, Properties of Fuzzy Sets, Fuzzy and Crisp Relations, Fuzzy to Crisp Conversion.

UNIT 4: FUZZY LOGIC –II

(Fuzzy Membership, Rules) Membership Functions, Interference in Fuzzy Logic, Fuzzy If -Then Rules, Fuzzy Implications and Fuzzy Algorithms, Fuzzifications and Defuzzificataions, Fuzzy Controller, Industrial Applications

UNIT 5: GENETIC ALGORITHM

Basic Concepts, Working Principle, Procedures of GA, Flow Chart of GA, Genetic Representations, (Encoding) Initialization and Selection, Genetic Operators, Mutation, Generational Cycle, Applications

| Introduction t | o macl | hine le | arning- | - Linea | r mod | els (SV | /Ms ai | nd Perc | ceptron | is, logist | ic regre | ssion)- |

Introduction to machine learning- Linear models (SVMs and Perceptrons, logistic regression)-Intro to Neural Nets: What a shallow network computes- Training a network: loss functions, back propagation and stochastic gradient descent- Neural networks as universal function approximates

UNIT 2: DEEP NETWORKS

History of Deep Learning- A Probabilistic Theory of Deep Learning- Backpropagation and regularization, batch normalization- VC Dimension and Neural Nets-Deep Vs Shallow Networks-Convolutional Networks- Generative Adversarial Networks (GAN), Semi-supervised Learning

UNIT 3: DIMENTIONALITY REDUCTION

Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet - Architectures – AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyperparameter optimization

UNIT 4: OPTIMIZATION AND GENERALIZATION

Optimization in deep learning– Non-convex optimization for deep networks- Stochastic Optimization-Generalization in neural networks- Spatial Transformer Networks- Recurrent networks, LSTM - Recurrent Neural Network Language Models- Word-Level RNNs & Deep Reinforcement Learning - Computational & Artificial Neuroscience

UNIT 5: CASE STUDY AND APPLICATIONS

Imagenet- Detection-Audio WaveNet-Natural Language Processing Word2Vec - Joint Detection-BioInformatics- Face Recognition- Scene Understanding- Gathering Image Captions **REFERENCES:**

| Course Type | Theory | | | | | | | | | |
| Objective(s) | To learn the theoretical and practical concepts of web programming. To introduce the programming languages for developing simple web applications. To make students to understand about the architecture of web server and deployment of web site To teach methodologies useful for the implementation of dynamic web applications To efficiently design and implement web applications using server side programming languages | | | | | | | | | |
| Course Outcon | ne(s) | | | | | | | | | |
| CO1 | Understand the programming concepts of HTML, DHTML, CSS, JavaScript, XML and other Web technologies | | | | | | | | | |
| CO2 | Understand Java programming concepts and utilize Java Graphical User Interface program writing. | | | | | | | | | |

| | - | | | | | | | | | | | |
|-------------------------|---|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO3 | Build Java Application for distributed environment. Design and Develop multi- | | | | | | | | | | | |
| | tier applications. | | | | | | | | | | | |
| CO4 | Utilize professional level platforms (ASP, JSP, Servlets) to produce software | | | | | | | | | | | |
| | systems/websites that meet specified user needs and constraints. | | | | | | | | | | | |
| CO5 | Understand database basics related to develop dynamic web applications and | | | | | | | | | | | |
| | Apply XML for designing web pages. | | | | | | | | | | | |
| Mapping of COs with POs | | | | | | | | | | | | |
| СО | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

UNIT 1: INTRODUCTION

World Wide Web – History of the World Wide Web, World Wide Web Consortium – HTML – Dynamic HTML – Object model and collections, Event model, Filters and Transitions.

UNIT 2: JAVA SCRIPT

Introduction – Simple program, Memory concepts, Arithmetic, Decision making - Equality and Relational operators – Control statements – Control structures, Operators – Functions – Programmer defined functions, JavaScript global functions, Recursion – Arrays – References and Reference parameters, Passing arrays to functions, Multidimensional arrays – Objects – Object types, Cookies.

UNIT 3: XML

Introduction, Structuring data, XML namespaces, Document Type Definitions (DTDs) and Schemas, Document type definitions, W3C XML schema documents, XML vocabularies, Document Object Model (DOM), DOM methods, Simple API for XML (SAX), Extensible Style sheet Language (XSL), Simple Object Access Protocol (SOAP).

UNIT 4: PERL, CGI AND PHP

Introduction, String processing and Regular expressions, Viewing Client/Server environment variables, Form processing and Business logic, Verifying a username and password, Connecting to a database, Cookies, Operator precedence chart.

UNIT 5: JAVA PROGRAMMING

Classes – Constructors, Garbage collection - Overloading methods – Overriding methods - Exception handling - Multithreading – Creating a thread, Synchronization, Inter thread communication - Streams – Byte streams, Character streams.

TEXT BOOKS:

1. 1. Harvey Deitel, Abbey Deitel, "Internet and World Wide Web: How To Program" 5th Edition.

2. Herbert Schildt, "Java – The Complete Reference, 7th Edition". Tata McGraw-Hill.

UNIT 1: INTRODUCTION TO BIG DATA

Introduction to Big Data Platform – Challenges of conventional systems – Web data – Evolution of Analytic scalability, analytic processes and tools, Analysis vs reporting – Modern data analytic tools, Stastical concepts: Sampling distributions, resampling, statistical inference, prediction error.

UNIT 2: MINING DATA STREAMS

Introduction to Streams Concepts – Stream data model and architecture – Stream Computing, Sampling data in a stream – Filtering streams – Counting distinct elements in a stream – Estimating moments – Counting oneness in a window – Decaying window – Realtime Analytics Platform(RTAP) applications – case studies – real time sentiment analysis, stock market predictions.

UNIT 3: HADOOP

History of Hadoop- The Hadoop Distributed File System –Components of Hadoop -Analyzing The Data with Hadoop-Scaling Out-Hadoop Streaming-Design of HDFS-Java interfaces to HDFS-Basics-Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort–Task execution-Map Reduce Types and Formats

UNIT 4: HADOOP ENVIRONMENT

Setting up a Hadoop Cluster -Cluster specification -Cluster Setup and Installation -HadoopConfiguration-Security in Hadoop -Administering Hadoop -HDFS -Monitoring-Maintenance-Hadoop benchmarks-Hadoop in the cloud

UNIT 5: FRAMEWORKS

Applications on Big Data Using Pig and Hive –Data processing operators in Pig –Hive services – HiveQL –Querying Data in Hive -fundamentals of HBase and ZooKeeper -IBM InfoSphere-. Visualizations -Visual data analysis techniques, interaction techniques.

UNIT 1: INFORMATION THEORY & SOURCE CODING

Introduction to Information Theory- Entropy & Types of Entropy Source Coding, Prefix Coding, Channel Capacity

UNIT 2: COMPRESSION ALGORITHMS

Optimal Compression- Compression Algorithms, Huffman Coding, Adaptive Huffman Compression, Dictionary Based Compression, Speech Compression, Sliding Window Compression, LZW,RLE, Lossy & Lossless Compression Schemes, Image Compression – GIF,JPEG

UNIT 3: ERROR CONTROL CODING TECHNIQUES

Types of Codes - Error Checking & Correcting Codes, Linear Block Codes, Cyclic Codes, BCH Codes, Convolution Codes

UNIT 4: BASIC NUMBER THEORY

Modular Arithmetic, Solving ax+by=d, Congruence's, Chinese Remainder Theorem Modular Exponentiation, Fermat's Little and Euler Theorem, Prime Number Generation, Random Number Generation, Primitive Roots, Legendre and Jacobi Symbols, Discrete Probability, Discrete Logarithms

UNIT 5: CRYPTOGRAPHIC TECHNIQUES

Security Goals, Threats and Attack on Information-Classic Cryptography-Symmetric Key Cryptography – Stream Ciphers, Block Cipher, Stream Cipher, DES, Triple DES, AES-Public and Private Key Cryptography – RSA, Diffie-Hellman-Hash Function – MD5, SHA-1, Digital Signature

UNIT 1: INTRODUCTION

History, Information Security, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC

UNIT 2: SECURITY INVESTIGATION

Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues

UNIT 3: SECURITY ANALYSIS

Risk Management: Identifying and Assessing Risk, Assessing and Controlling Risk

UNIT 4: LOGICAL DESIGN

Blueprint for Security, Information Security Policy, Standards and Practices, ISO 17799/BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT 5: PHYSICAL DESIGN

Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control Devices, Physical Security, Security and Personnel

UNIT 1: WEB ESSENTIALS

Creating a Website - Working principle of a Website - Browser fundamentals - Authoring tools -Types of servers: Application Server - Web Server - Database Server

UNIT 2: SCRIPTING ESSENTIALS

Need for Scripting languages - Types of scripting languages - Client side scripting - Server side scripting - PHP - Working principle of PHP - PHP Variables - Constants - Operators - Flow Control and Looping - Arrays - Strings - Functions - File Handling - PHP and MySQL - PHP and HTML - Cookies - Simple PHP scripts

UNIT 3: NETWORKING ESSENTIALS

Fundamental computer network concepts - Types of computer networks - - Network layers - TCP/IP model - Wireless Local Area Network - Ethernet - WiFi - Network Routing - Switching - Network components.

UNIT 4: MOBILE COMMUNICATION ESSENTIALS

Cell phone working fundamentals - Cell phone frequencies & channels - Digital cell phone components - Generations of cellular networks - Cell phone network technologies / architecture - Voice calls & SMS.

UNIT 5: APPLICATION ESSENTIALS

Creation of simple interactive applications - Simple database applications - Multimedia applications - Design and development of information systems – Personal Information System – Information retrieval system – Social networking applications.

UNIT I: INTRODUCTION

Getting R, R Version, 32-bit versus 64-bit, The R Environment, Command Line Interface, RStudio, Revolution Analytics RPE, R Packages: Installing Packages, Loading Packages, Building a Package R Basics: Basic Math, Variables, Data Types, Vectors, Calling Functions, Function Documentation, Missing Data Advanced Data Structures: data frames, Lists, Matrices, Arrays

UNIT II: R DATA

Reading Data into R: Reading CSVs, Excel Data, Reading from Databases, Data from Other Statistical Tools, R Binary Files, Data Included with R, Extract Data from Web Sites Statistical Graphics: Base Graphics, ggplot2

UNIT III: R FUNCTIONS & STATEMENTS

Writing R Functions: Hello, World!, Function Arguments, Return Values, do.call Control Statements: if and else, switch, ifelse, Compound Tests Loops: for Loops, while Loops, Controlling Loops

UNIT IV: DATA MANIPULATION

Group Manipulation: Apply Family, aggregate, plyr, data.table Data Reshaping: cbind and rbind, Joins, reshape2 Manipulating Strings: paste, sprint, Extracting Text, Regular

UNIT V: R STATISTICS & LINEAR MODELING

Probability Distributions: Normal Distribution, Binomial Distribution, Poisson Basic Statistics: Summary Statistics, Correlation and Covariance, T-Tests 200, ANOVA Linear Models: Simple Linear Regression, Multiple Regression Generalized Linear Models: Logistic Regression, Poisson Model Diagnostics: Residuals, Comparing Models, Cross-Validation, Bootstrap, Stepwise Variable Selection

UNIT 1: INTRODUCTION TO OOP, CLASS & OBJECTS

Object Oriented Programming Paradigm- Basic Concepts of OOP- Benefits of OOP- Object Oriented Languages- Features of OOP- How OOP Differ from Procedure Oriented Programming-applications of OOP-a Simple C++ Program- structure of C++ Program-basic Data Types in C++- Operators in C++ - Scope Resolution Operator- Member Dereferencing Operators- memory 31 SE-Engg&Tech-SRM-2013 management operators- Introduction of Classes-Inline member functions-Objects - Arrays of Objects- Objects as Function Arguments-Static data member and static member functions – Constructors- Parameterized Constructors-Default Argument constructors - Copy Constructors- Destructors – Friend functions.

UNIT 2: POLYMORPHISM, TEMPLATES & EXCEPTION HANDLING

Introduction to Operator overloading- Rules for Operator overloading- overloading of binary and unary operators-Introduction to inheritance–Types of inheritance- Abstract Classes- new Operator and delete Operator- Pointers to Objects- this Pointer- Virtual Functions- Pure Virtual Functions- Introduction to Class Templates- Function Templates-Member Function Templates-Basics of Exception Handling- Types of exceptions- Exception Handling Mechanism- Throwing and Catching Mechanism- Rethrowing an Exception- Specifying Exceptions.

UNIT 3: JAVA PROGRAMMING

An overview of Java – Data Types – Variables and Arrays – Operators – Control Statements – Classes – Objects – Methods – Inheritance – Packages – Abstract classes – Interfaces and Inner classes – Exception handling – Introduction to Threads – Multithreading – String handling – Streams and I/O – Applets.

UNIT 4: WEBSITES BASICS, HTML 5, CSS 3, WEB 2.0

Web 2.0: Basics-RIA Rich Internet Applications – Collaborations tools – Understanding websites and web servers: Understanding Internet – Difference between websites and web server- Internet technologies Overview –Understanding the difference between internet and intranet; HTML and CSS: HTML 5.0, XHTML, CSS 3.

UNIT 5: CLIENT SIDE AND SERVER SIDE PROGRAMMING

Java Script: An introduction to JavaScript–JavaScript DOM Model-Date and Objects,-Regular Expressions- Exception Handling-Validation-Built-in objects-Event Handling- DHTML with JavaScript. Servlets: Java Servlet Architecture- Servlet Life Cycle- Form GET and POST actions- Session Handling- Understanding Cookies- Installing and Configuring Apache Tomcat WebServer;- DATABASE CONNECTIVITY: JDBC perspectives, JDBC program example – JSP: Understanding Java Server Pages-JSP Standard Tag Library(JSTL)-Creating HTML forms by embedding JSP code.

UNIT 1: FUNDAMENTALS OF NETWORKING STANDARDS AND PROTOCOLS

Network Communication Architecture and Protocols - OSI Network Architecture seven Layers Model - Definition and Overview of TCP/IP Protocols -TCP/IP Four Layers Architecture Model - Other Network Architecture Models: IBM SNA.

UNIT 2: ROUTED AND ROUTING PROTOCOLS

Application Layer Protocols-Presentation Layer Protocols- Session Layer Protocols - Transport Layer Protocols - Network Layer Protocols - Data Link Layer Protocols - Routing Protocols -Multicasting Protocols - MPLS.

UNIT 3: SDN AND NETWORK MANAGEMENT PROTOCOLS

Overview of ISDN – Channels – User access – Protocols Network management requirements – Network monitoring – Network control – SNMP V1, V2 and V3 – Concepts, MIBs – Implementation issues-RMON.

UNIT 4: SECURITY AND TELEPHONY PROTOCOLS

Network Security Technologies and Protocols - AAA Protocols - Tunneling Protocols - Security Protocols- Private key encryption – Data encryption system, public key encryption – RSA – Elliptic curve cryptography – Authentication mechanisms– Web security -Secured Routing Protocols - IP telephony -Voice over IP and VOIP Protocols –Signaling Protocols-Media/CODEC.

UNIT 5: NETWORK ENVIRONMENTS AND PROTOCOLS

Wide Area Network and WAN Protocols - Frame relay - ATM - Broadband Access Protocols - PPP Protocols - Local Area Network and LAN Protocols - Ethernet Protocols - Virtual LAN Protocols - Wireless LAN Protocols - Metropolitan Area Network and MAN Protocol - Storage Area Network and SAN Protocols.

UNIT 1: INTRODUCTION TO STORAGE TECHNOLOGY

Review data creation and the amount of data being created and understand the value of data to business - challenges in data storage and data management - Solutions available or data storage - Core elements of a data center infrastructure - role of each element in supporting business activities.

UNIT 2: STORAGE SYSTEMS

Hardware and software components of the host environment - Key protocols and concepts used by each component - Physical and logical components of a connectivity environment Major physical disk - access characteristics - and performance implications

UNIT 3: NETWORKED STORAGE

Evolution of networked storage – Architecture – Components - and topologies of FC-SAN, NAS, and IP-SA Benefits of the different networked storage options -Understand the need for long-term archiving solutions

UNIT 4: DATA CENTER

List reasons for planned/unplanned outages and the impact of downtime - impact of downtime - Differentiate between business continuity (BC) and disaster recovery (DR) - RTO and RPO - Identify single points of failure in a storage infrastructure and list solutions to mitigate these failures - Architecture of backup/recovery and the different backup/recovery topologies- key management tasks in a data center.

UNIT 5: VIRTUALIZATION

Virtualization technologies – block-level and file-level virtualization technologies and Processes

UNIT 1: INTERNETWORKING

IPv6 - Design issues - Scalability - Addressing - Headers - Routing - Auto configuration - Transition from IPv4 to IPv6 - Interoperability - QoS in IPv6 - Multicast support - ICMPv6 - Security in IPv6

UNIT 2: QUALITY OF SERVICE

QoS taxonomy - Resource allocation - Scheduling - Queuing disciplines - Delay Analysis Integrated services - Differentiated services - RSVP.

UNIT 3: MPLS AND VPN

MPLS Architecture - MPLS to GMPLS - Traffic engineering with MPLS - QoS -Network recovery and restoration with MPLS – VPN L2 – VPN L3 .

UNIT 4: OPTICAL NETWORKS

Photonic Packet switching - WDM network design - Introduction to optical networks -optical layer - SONET/SDH - Optical packet switching - Client layers - Signaling protocols and network operation

UNIT 5: SOFTWARE DEFINED NETWORKING

Introduction to SDN - Network Function Virtualization - Data Plane- Control Plane - SDN software stack - Data center Traffic Management

UNIT 1: INTRODUCTION

Agents as a paradigm for software engineering - Agents as a tool for understanding human societies- Intelligent Agent: Agents and Objects - Agents and Expert Systems - Agents as Intentional Systems - Abstract Architectures for Intelligent Agents - How to Tell an Agent What to Do

UNIT 2: LEARNING IN AGENTS

Proportional case - Handling variables and qualifiers - Dealing with intractability - Reasoning with horn clauses - Procedural control of reasoning - Rules in production – Reasoning with Higher order Logics.

UNIT 3: COMMUNICATION AND COOPERATION IN AGENTS

Software tools for ontology - OWL - XML - KIF - Speech acts - Cooperative Distributed Problem Solving - Task Sharing and Result Sharing - Result Sharing - Combining Task and Result Sharing - Handling Inconsistency - Coordination - Multi agent Planning and Synchronization

UNIT 4: DEVELOPING INTELLIGENT AGENT SYSTEMS

Situated Agents: Actions and Percepts - Proactive and Reactive Agents: Goals and Events -Challenging Agent Environments: Plans and Beliefs - Social Agents - Agent Execution Cycle -Deciding on the Agent Types - Grouping functionalities - Review Agent Coupling -Acquaintance Diagrams - Develop Agent Descriptors

UNIT 5: APPLICATIONS

Agent for workflow and business process management- Mobile agents - Agents for distributed systems - agents for information retrieval and management - agents for electronic commerce -

agent for human- computer interface - agents for virtual environments - agents for social simulation. **TEXT BOOKS:** 1. Michael Wooldridge, "An Introduction to Multi Agent Systems", Second Edition, John Wiley and Sons, 2009. 2. UNIT 2: INFORMATION RETRIEVAL

Information Retrieval architecture - Indexing - Storage - Compression techniques - Retrieval approaches - Evaluation - Search Engines - Commercial search Engine features - comparison -Performance measures - Document processing - NLP based Information Retrieval - Information Extraction - Vector Space Model

UNIT 3: TEXT MINING

Categorization : Extraction based Categorization - Clustering - Hierarchical clustering - Flat Clustering - Document classification and routing - Finding and organizing answers from text search - Categories and clusters for organizing retrieval results - Text Categorization - Efficient summarization using lexical chains - Pattern extraction

UNIT 4: GENERIC ISSUES

Multilinguality - Multilingual Information Retrieval and Speech Processing - Multimodality-Text and Images - Modality Integration - Transmission and storage - Speech coding - Evaluation of systems - Human factors and user acceptability.

UNIT 5: APPLICATIONS

Machine translation - Transfer metaphor - Interlingua and statistical approaches - Discourse processing - Dialog and conversational agents - Natural language generation - Surface Realization and discourse planning

UNIT 1: INTRODUCTION

Definition – Benefits – Challenges & opportunities- Developing E-learning-E-learning approachesE-learning components-Synchronous and asynchronous e-learning-Quality of e-learning-Blended learning- ROI metrics & evaluation – E-Learning cycle – Learning strategy – Business drivers – Elearning strategy.

UNIT 2: DESIGN

Identifying and organizing course content-Needs analysis- Analyzing the target audienceIdentifying course content-Defining learning objectives-Defining the course sequence-Defining instructional, media, evaluation and delivery strategies-Defining instructional methods, Defining the delivery strategy, Defining the evaluation strategy. Instructional design – Design issues – Types of learning engagements – Blended learning – Team – Infra structure – Vendor relationships.

UNIT 3: CREATING INTERACTIVE CONTENT

Multi-channel delivery – Learner support – Developing curriculum – E-learning standards – Content development process- Creating storyboards-Structure of an interactive e-lesson Techniques for presenting content-Integrating media elements-Courseware development Authoring tools-Types of authoring tools-Selecting an authoring tool.

UNIT 4: WEB BASED TRAINING

Definition – Need for web based training – Choosing an approach - Kind of courses – Technical standards – Metaphors – Course framework – registration – Running the course – resources – Feedback – Access - Collaborative learning- Moodle and other open-source solutions - E-learning methods.

UNIT 5: LEARNING METHODOLOGY

Organizing learning sequences – Common lesson structures – Creating building blocks – Designing learning sequences – Learning activities – Test and exercise learning – Planning tests – Selecting questions – Sequencing test questions – Feedback – Improve testing – Prevent cheating.

UNIT 1: PATTERN CLASSIFIER

Overview of Pattern recognition – Discriminant functions – Supervised learning – Parametric estimation – Maximum Likelihood Estimation – Bayesian parameter Estimation – Problems with Bayes approach – Pattern classification by distance functions – Minimum distance pattern classifier.

UNIT 2: CLUSTERING

Clustering for unsupervised learning and classification – Clustering concept – C Means algorithm – Hierarchical clustering – Graph theoretic approach to pattern Clustering – Validity of Clusters.

UNIT 3: FEATURE EXTRACTION AND STRUCTURAL PATTERN RECOGNITION

KL Transforms – Feature selection through functional approximation – Binary selection - Elements of formal grammars - Syntactic description - Stochastic grammars - Structural representation.

UNIT 4: HIDDEN MARKOV MODELS AND SUPPORT VECTOR MACHINE

State Machines – Hidden Markov Models – Training – Classification – Support vector Machine – Feature Selection.

UNIT 5: **RECENT ADVANCES**

Fuzzy logic – Fuzzy Pattern Classifiers – Pattern Classification using Genetic Algorithms – Case Study Using Fuzzy Pattern Classifiers and Perception.

| UNIT 1: INT | rod | UCTIO |)N | | | | | | | | | |

Introduction – Issues – Data Representation – Data Presentation – Common Mistakes in design. **UNIT 2: FOUNDATIONS FOR DATA VISUALIZATION**

Visualization stages – Experimental Semiotics based on Perception Gibson_s Affordance theory – A Model of Perceptual Processing – power of visual perception-Types of Data-visualization and data objects.

UNIT 3: COMPUTER VISUALIZATION

Non-Computer Visualization – Computer Visualization: Exploring Complex Information Spaces – Fisheye Views – Applications – Comprehensible Fisheye views – Fisheye views for 3D data – Interacting with visualization

UNIT 4: MULTIDIMENSIONAL VISUALIZATION

One Dimension – Two Dimensions – Three Dimensions – Multiple Dimensions – Trees – Web Works – Data Mapping: Document Visualization – Workspaces.

UNIT 5: CASE STUDIES

Small interactive calendars – Selecting one from many – Web browsing through a key hole – Communication analysis – Archival analysis

TEXT BOOKS:

1. Colin Ware, —Information Visualization Perception for Design Margon Kaufmann Publishers, 2004, 2nd edition.

2. Robert Spence —Information visualization – Design for interaction^{II}, Pearson Education, 2 nd Edition, 2007

3. Stephen Few, —Information Dashboard Design-The Effective Visual Communication of Datal: O'Reilly Media Publisher,1st Edition 2006
